14 Tools in One

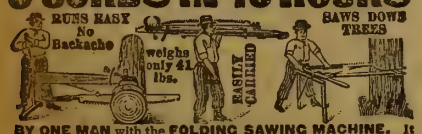
T. F. Hagen, cashier bank, Glendive, Mt., paid for machine in one day's work. His letter and thousands more from users prove big saving of time, money, labor. Rapid artificial diamond wheels sharpen sickles, discs, axes, saws, plow points, ensilage knives, etc., amazingly quick. We send machine on free trial.

LUTHER DIMO-GRIT GRINDER

has metal frame, enclosed shaft-drive, dust proof bearings, runs easy as sewing machine. 25 times faster than grindstone, 10 times better than emery. Will not draw temper. Special attachments—forge, milk tester, jig saw, rip saw, lathe, drill, etc., furnished. Fully guaranteed. Write for free book on tool grinding and liberal free trial offer.

LUTHER GRINDER CO. 412 Stroh Bldg. Milwaukee, Wis.

9 CORDS IN 10 HOURS



BY ONE MAN with the **FOLDING SAWING MACHINE.** It saws down trees. Folds like a pocket-knife. Saws any kind of timber on any kind of ground. One man can saw more timber with it than 2 men in any other way, and do it easier. Send for FREE illustrated catalog No. A36 showing Low Price and testimonials from thousands. First order gets agency.

FOLDING SAWING MACHINE CO.
257-263 West Harrison St. Chicago, Illinois

ed the sale of the land by A's widow. Better have a local lawyer examine said proceedings.

DEED AND WILL—RECORDING.

A Subscriber, Iowa.—(1) Can real estate be left to a friend by a deed which is not to be recorded until the death of the owner, or is a will necessary to effect such purpose. (2) How soon after a deed is made must it be recorded?

Answer.—We infer that the purpose to be accomplished is to deed land to a person and not have the deed recorded nor take effect till the maker of the deed dies, he to have full control and ownership of the land during his lifetime, the object evidently being to have the deed really take the place of a will. We advise against this course and think it a much better way to make a will. (2) The law does not fix a limit. A deed may be recorded at any time after it is executed. It is safer, however, to have a deed recorded soon after it is made.

HUSBAND'S DEED TO WIFE.

A Subscriber, Wapello, Iowa.—(1) A man owns property and money in his own name, without encumbrance thereon, and he wishes to put part or all of his land in his wife's name. Can he do so by deeding it directly to her? (2) In case he does so can she hold it if in after years the husband gets in debt? (3) Can he so deed the land to his wife that it will go back to him in case she dies first?

Answer.—(1) A man can lawfully deed his property to his wife in Iowa. (2) If the man is not in debt when he makes such a deed and has no fraudulent purpose in making it, his wife can hold the property, even though the husband afterwards incurs debts. (3) He can.

WIDOW'S PORTION—MORTGAGE.

A Subscriber, Iowa county, Iowa.—A man died intestate, leaving his farm mortgaged, and owing notes and other debts. Is his widow entitled to her third part of his estate before the outstanding debts are paid?

Answer.—If the mortgage was given for purchase price of the land, or if the wife joined her husband in making the mortgage the amount secured by the mortgage must first be paid before the widow can have her distributive share in the land, that is, her third of the land is subject to the mortgage. As to all other debts not secured by mortgage she is entitled to her third not subject to such debts.

RIGHTS OF RENTERS.

Mr. R. W. M., Humphrey, Neb.—A and B rented a half section of land from C and have been farming it. During the first year the land was farmed as a sort of partnership transaction, there being no division made in the land by C as between A and B. Afterwards one farmed a field here and the other a field there, wherever it was convenient. This proving unsatisfactory, C divided the land, giving A the quarter section with the improvements and B the other quarter. A has a family and B boards with him. It was verbally agreed between A and B that B should share the corncrib, granary and barn with A, but this fall the crib did not hold all the corn and B deliberately piled some of his corn on the ground around these improvements, well knowing that A had pigs running on the ground which A pays cash rent for. B demands that A shall prevent his pigs from running on this ground. Can he recover damages from A for the injury done to the corn by the pigs?

Answer.—He cannot. B had no right to pile his corn on the land rented by A when he knew A's pigs were running upon it. He will have to bear the loss occasioned by his own carelessness and want of prudence.

POSTAGE ON LETTER.

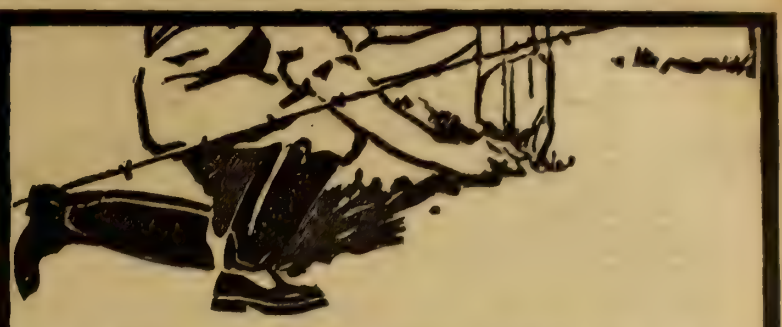
Mrs. Alex. Hensley, Lexington, Ill.—Is it unlawful to remove from a self-addressed envelope the stamp printed thereon and use it on a plain envelope, and if so, what is the penalty for such an offense?

Such an act is not a criminal offense and there is no penalty therefor, but the consequence would be that the stamp cut from the government envelope and pasted on another envelope would not pay the postage thereon, and the postmaster would not forward the letter for want of postage.

DAMAGE BY CHICKENS.

A Subscriber, Denver, Ill.—A and B live on opposite sides of a road. A keeps chickens on his place and they cross the road and go upon B's land, but do no damage. A has a hedge fence and B has a hedge fence. B demands that A shall make a chicken-tight fence and keep his chickens on his own place, but A will not do so and is willing to pay for what damage his chickens do. Can B compel A to keep his chickens on his own place?

Answer.—He cannot compel A to make a chicken-tight fence, but if A's chickens do damage to B's premises he can recover for such damage by a suit at law.



A Fence Post Gives Way at the Bottom First—So Does an Ordinary Rubber Boot

Right on the sole where earth, air, water and wear join forces to rot everything they touch, "Ball-Band" Boots give famous service. It takes good brains and experience as well as good rubber to make a rubber boot and all of these enter into the making of "Ball-Band" Boots. From straps to heel "Ball-Band" Boots are built strong.

"BALL TRADE MARK BAND"

RUBBER FOOTWEAR

"Ball-Band" Boots are made to work in—not just to put on in *very* wet weather. Wherever the brush strikes above the shoe tops—wherever there's more wet than leather can stand you need rubber boots, and "Ball-Band" Rubber Footwear is made for the man who knows this. Take a "Ball-Band" Boot and wear it out—you'll find it a harder job than you thought because these boots are made to resist wear. They are made by men who know how to make them stand the snags, the bumps of frozen ground and the kicks of clods and rocks.

We only claim for "Ball-Band" Boots what they ordinarily ought to do. Many friends have written us some remarkable records of what "Ball-Band" goods have done.

Look for the Red Ball which is the "Ball-Band" trade-mark. You will see it in the store windows and on the boots. Remember when you buy "Ball-Band" Boots or Arctics that you make a long time investment in rubber footwear. If you figure the cost per day's wear you will find that "Ball-Band" Rubber Footwear is the cheapest you can buy.

We also make a rubber hip boot. If you fish much or farm on irrigated soil you need this boot. You can wear it into water almost waist deep and stay dry as a gun barrel.

The "Ball-Band" Coon Tail Knit Boot is made of thick *knitted* wool—not felt, insuring the utmost wear and service. These wool boots are shrunk as only we know how to shrink them and shaped to a shape that stays. They can't shrink any more, hence they can be washed and the snow excluder keeps out of the rubber the chaff and mud as well as snow. Your feet and legs will stay warm in a blizzard when you wear this boot into the frozen snow. We are the only people making a really high grade boot of this character.

Look for the "Ball-Band" sign—the Red Ball in store windows and on the boots. If the name "Ball-Band" is not there, you are not buying the boot we make. 45,000 dealers sell "Ball-Band" Footwear. If your dealer does not sell "Ball-Band" Boots we invite you to write us. We'll send you the name of a nearby dealer who can supply you.

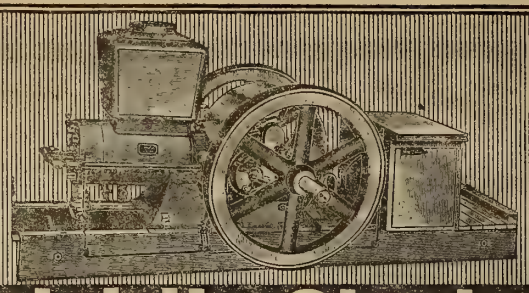
"The House That Pays Millions for Quality"



Electricity Starts the Fly Wheels Spinning

NEVER again, need you hump yourself to crank a gasoline engine.—Never, need you experience the fussing, delay and inconvenience of getting your engine started. The Electric Starting Woodpecker solves the most annoying problem that ever troubled the farmer—a touch of a button sends the wheels spinning—works as sure and certain in January as in July. Don't be content with any other—*you never could be satisfied.*

And besides having this, the most ingenious labor saving device ever put on a farm engine, you will find the

Electric Starting WOODPECKER

contains a startling array of strong features that excels any engine ever manufactured, yet it costs no more than ordinary engines. Just a few of its countless features are:

The self-priming gasoline mixer insuring easy cold weather starting. Hopper cooler the only successful system to keep cylinder at *proper* heat. Mounted on steel girder sub-base so you can place it anywhere at a moment's notice.—*No foundation necessary.* Self-contained equipment—no pipes or wires to get out of order or reconnect when moved. *Develops a big surplus above rated power.* Speed can be changed while running. Minimum fuel expense. Fully guaranteed. And then there's our big, liberal

30 Days Free Trial

that lets the engine sell itself. It will cost you nothing to use this engine on your farm *30 days free—not even a deposit.* Write us *quick* for our proposition. You may be sorry if you close any deal before you get our offer. Write today for our free book and full particulars.

STEEL Tractors Have Come

Why pay $2,000 to $3,000 for a clumsy **iron** tractor outfit that wastes one-fourth your fuel in pulling itself, that can't get into fence corners, that can't be used on soft ground? Why do it, when for less money you can get a powerful Bates All-Steel Tractor?

The Bates, being **all steel** and not iron, weighs nearly 8,000 lbs. less than other tractors of same power! That means a **tremendous** fuel saving, and you can plow faster and can harrow your fields, **FOR THE BATES DOESN'T PACK THE SOIL.**

Turns Square Corners

The only tractor plowing outfit in the world that turns **square** corners. Can get right into fence corners. No need to finish your fields by horse plowing. No need of a plowman. The Bates Direct Connected Plowing System enables you to handle both engine and plows yourself. Plow platform is parallel with and connected with the engine platform. No getting off to handle plows. No heavy lifting. Controlling levers in easy reach. Only one adjustment required.

The Bates All-Steel Tractor will plow, disc, harrow, roll or seed any part of any field that horses can work in. Pulls 4 plows right up a steep, quarter pitch slant. Other tractors won't do it. They are too heavy. They must pull too much dead weight.

With this outfit you can plow 8 to 12 acres per day. It does the work of 16 horses. Plow carriage can be instantly taken off and engine is then ready for other farm jobs.

WRITE! Write for latest Tractor Book—handsome, interesting, fully illustrated. Shows how and why the Bates All-Steel Tractor in 3 years forged to the front. You will be agreeably surprised at the PRICE too. Book comes by return mail.

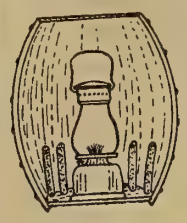
Low Down Easy to Load

HINTS·SUGGESTIONS·DEVICES

WE extend a special invitation to our subscribers to assist us during the coming months in making this department better than ever. Please send along a description, accompanied by a drawing, of any handy device you may have around the farm, or something that is connected with the home.

THAWING DYNAMITE.

One may pick up almost any large daily paper these days and read of an accidential dynamite explosion in which one or more persons were killed and injured, and, strange as it seems to us, many of these accidents were caused from thawing frozen dynamite, in spite of the fact that the papers are full of such happenings. A safe and sure way of thawing frozen dynamite is herewith illustrated. First procure an old empty and dry keg or box of the proper shape and size, place the dynamite around the sides as shown, place a lighted lantern in the box, and cover with a piece of cloth or a sack. The cloth must not be so thick and heavy that the foul air cannot escape, or the light will not burn. One great advantage of the method is, it can be placed far away from buildings, etc., but if carefully handled there is no danger in thawing the explosive in this manner.

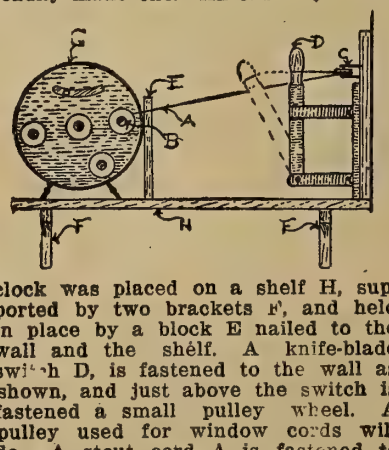


Wagon Box Rack.

The handy box or hay rack herewith illustrated can be made for a small sum and will last for a lifetime. The pipes are one and one-quarter-inch gas or water pipe, galvanized, as are all the fittings. After the bracket D has been made, swing it to wall in iron straps as shown at AA. These turn up at the lower ends, and have holes for receiving the bracket as at CC. Two of the brackets must, of course, be used, and as they can be bolted or fastened with lag screws to the studding, they will, when folded back against the wall, occupy very little space. Any plumber can make these brackets if you have no tools for such work, and the blacksmith can make the straps AA.

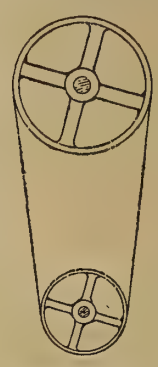
Automatic Lighting Device.

An Illinois boy who has mechanical ideas constructed the automatic lighting device herewith illustrated. The home was lighted with a private electric light plant, in which storage batteries were used to store the surplus electricity, saving same for use when the engine and dynamo were not running. As the device is very simple, anyone with a few tools can readily make one. An ordinary alarm clock was placed on a shelf H, supported by two brackets F, and held in place by a block E nailed to the wall and the shelf. A knife-blade switch D, is fastened to the wall as shown, and just above the switch is fastened a small pulley wheel. A pulley used for window cords will do. A stout cord A is fastened to the winding key of the alarm B, passed around the pulley C and made fast to the switch handle D. The alarm is now wound and set for any hour you wish the lights turned on, the switch being left open as shown by the dotted lines, and your device is ready to work. By connecting the string direct to the switch handle D, in place of passing it over the pulley C, the pull will be just opposite, and will open the switch turning off the lights. As many lights as desired may be connected up and turned on or off with this device, and the lights may, of course, be located either in the house, barn, or some place in the yard.



To Find Speed of Pulley.

Many farmers have during the past few years installed various kinds of machinery operated with some kind of an engine. Much of this machinery has been installed without any previous experience, and in many cases the various shafts or pulleys do not have the proper speed. Possibly the accompanying illustration and this short description will be of some help to those who have had trouble along this line. In the illustration the lower pulley and shaft is supposed to be the main shaft, and the upper pulley and shaft, the countershaft, with the belt connecting them as shown. Now as manufacturers, in all cases, send or will send instructions as to proper speed for various machines sent out by them



THIS PLANTER DOUBLES POTATO — —PROFITS

Reduces planting costs to a minimum. The Eureka opens the furrow, drops seed accurately any distance or depth desired, puts on fertilizer if wanted, covers perfectly and marks next row. Always plants uniform depth. Three sizes, one or two rows.

PATENTS Watson E. Coleman, Patent Lawyer, Washington, D.C. Advice and books free. Rates reasonable. Highest references. Best services

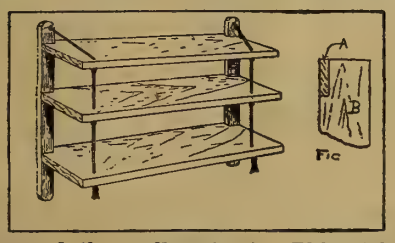
the next thing in order will be to find the speed of our main shaft. Every engine has a speed indicator sent out with it. If not, one can be purchased at any hardware store for twenty-five to fifty cents. To find the speed of the countershaft, if the speed of the main shaft has been determined, we multiply the revolutions of the main shaft by the diameter in inches of the pulley, and divide by the diameter in inches of the pulley on the countershaft. This will give the number of revolutions of the countershaft. To find the size of a pulley required for countershaft, when the revolutions of the pulley on main shaft are known, multiply the diameter in inches, of the driving pulley by the revolutions of the main shaft, and divide by the speed required of your pulley, and the answer will give the size in inches of the pulley required. To find the size of a pulley for a main shaft, if the speed of the shafts and the diameter of the pulley on the countershafts are known, multiply the diameter in inches of the pulley by the speed of the countershaft and divide by the revolutions of the main shaft. The answer will be the diameter in inches of pulley required. Any or all of the above calculations can be made by anyone who will give the matter a few moments' thought, and as it is a well-known fact that prower-driven machinery will not give best results if not properly speeded, it will pay you to examine the pulleys on that machine that does not seem to work just right.

Recharging Batteries.

Many people do not know that an exhausted battery can be temporarily recharged and made to again work for a short time with water alone. As shown in the illustration take a pocketknife, an old file, or anything handy with which you can bore two holes on opposite sides of the carbon post, and make a hole about an inch deep. Fill with water two or three times and wait five minutes, and you can run your auto or gas engine for quite awhile. The position of the holes are shown at AA. This method will often enable one to reach home with batteries that otherwise could not be used when exhausted.

Inexpensive Book Shelf.

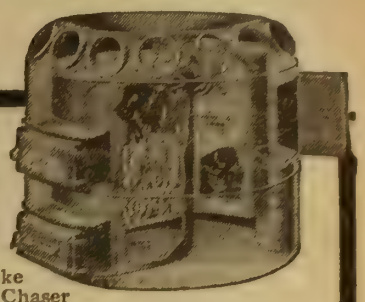
In these days of inexpensive papers, magazines, farm journals, etc., the problem of keeping them handy, and in order, is a vexing one in many homes. One way to accomplish the desired end is to build a set of shelves as herewith illustrated. Almost any woman or boy can build these shelves, and when properly finished they are ornamental as well as useful. To make a set of the shelves, secure as many shelves as you desire, have them about eight inches wide, one inch thick, and as long as wanted. About three feet, however, will be the right length. Shape the ends as shown at B so they will fit



Fig

around the wall strip A. This strip should be four inches wide and one inch thick. The ends may be square or shaped to suit your fancy. Bore holes in the front edges for a small cotton rope as illustrated. Tie a knot in one end and ravel the rope out to form a tassel. Now tie knots under each shelf as shown, running the rope through the shelf after each knot. Finally pass the rope through the top end of the wall strips and fasten with nails, or cut the hole out to receive the knot, and nail or screw the completed shelf to the wall as shown. The wood work may be stained or dyed with any of the many wood stains now on the market, and the result will be a neat place for the papers, schoolbooks, etc.

This Is the One and Only Furnace Manufactured Today That Is Absolutely Guaranteed To Heat Every Room To 70 Degrees Even In the Coldest Weather



I have a very interesting book about this furnace, Mr. Coal Buyer, and I would like to send it to *you* right away, and show you how you can actually save one-third on your fuel bill this winter.

I would like to show you just exactly what I have shown thousands of other dissatisfied land owners and home-owners. I would like to absolutely *prove* to you that this Winter Chaser furnace of mine is the most economical and even heater manufactured today.

I have been in the furnace manufacturing business now for thirty years and have something here to offer you that is really the best thing your money can buy in the heating line. There are many reasons why my

Campbell's Guaranteed Winter Chaser Furnace

is the biggest saver of coal bills of any heater in the world. The large firepot which permits slow combustion, is one of the biggest points. The patent heat retainer is another—the fact that our furnace is gas tight and constructed of the very heavy steel plate is another point—the big air chamber is another.

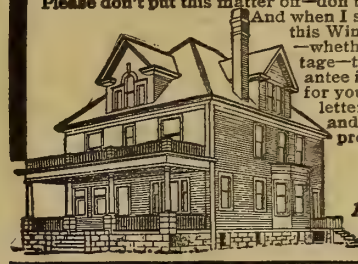
These points and many others that I want to tell you about personally, make my Winter Chaser the biggest saver of dollars and cents on the coal bills that has ever been manufactured, and put within the reach of every man's pocketbook.

But economy is not the only point. My Winter Chaser is so constructed of 3-16-inch steel plate that it's the most durable and lasting furnace on the market—many of them have been in homes for more than 25 years and are today giving just as perfect heating as they did when they were first installed!

My Winter Chaser cannot possibly freeze and burst. It burns *anything*—it's the quickest heating furnace on the market today—its proper heating arrangement of pipes is just another item that cuts down on Mr. Coal Man's profit—you have pure, sweet, clean, moist air in every room in the house twenty-four hours of every day—you have warm floors with every register in the right place, and all in all, the most healthful kind of heat that can be produced.

Just Write Me Today for My Free Book--Learn How to Save One-Third of Your Coal Bill!

Please don't put this matter off—don't overlook such a guaranteed offer as this one of mine. And when I say *guaranteed* I mean every word of it. I guarantee this Winter Chaser of mine to heat every room in your house—whether it be a twelve room mansion, or a three room cottage—to 70 degrees in even the most severe weather. I guarantee it to produce the cleanest, most perfectly moist heat for you at the *least possible cost*. Just drop me a postal or letter today asking me for this free book "Twice a Day," and I will send it to you by return mail. It will be a most profitable move on your part. Address me personally,



A. K. CAMPBELL, President
Campbell Heating Company
1213 Walnut Street *Des Moines, Iowa*

Costs Less Per Year
That's the Record of Great Western Spreaders for the Past 12 Years
Less Expense—Less Labor—Less Repairs—Longer Service

The cost of a manure spreader must be figured by the *years* of service it gives you and the *kind* of service you get out of it. The first cost of a **Great Western** may be a little more than the price of some shoddy, poorly-made, heavy-draft spreader, but it costs more to make a **Great Western**, and that extra cost is made up to you many times in the kind and length of service it gives. Based on the *cost per year*, the **Great Western** is the cheapest spreader you can buy. The extra dollars you pay at the start are paid for *quality*, and you'll get them all back, with many more.

Great Western—Low Down

embraces all the great features that have kept it ahead of all others for over twelve years. More than 100,000 farmers testify to the superiority of this machine. There's but one opinion regarding this spreader, and that is that it is the *one perfect* spreader.

Features that Count

Wheels under the load—roller bearings—rear wheels track with the front—lightest draft—no neckweight—simplest direct drive—no hidden parts, no enclosed gears—individual rollers—strong, rigid oak beater rails—these are some of the points that put the **Great Western** in first place years ago, and have *held* it there ever since.

Trussed Steel Frame

The Great Western frame is built for great strength—of best trussed steel, firmly braced. All weight of load and beater, and force of operation, rests on 4-inch steel slills.

Simplest Drive Possible

Nothing to get out of order. No enclosed gears. Simple shifting device—no parts in motion when driving to or from field.

Fewest parts on any spreader. Simplicity, strength, service and durability are its crowning features. *Write today* for Free Spreader Book.

Cleaner Corn —Higher Prices

Shell your own Corn and your neighbor's too

Take in what you've been *paying out* for corn shelling—and *much more*—by shelling your own and your neighbor's corn. Get 1 to 3 cents more per bushel for your corn by shelling it *cleaner* and grading it one or two grades higher. Shell your corn any day you have the time—days when you have no other pressing work.

The REEVES Power Corn Sheller

will soon pay for itself and return you handsome yearly profits. *Makes quick work*, shells over 1,000 bushels per hour. *Shells cleaner*, because it has the most advanced type of suction fan. Will stand many years of the hardest use. Built on the cone cylinder type—has long ribs, chilled to stand hardest wear. The cob carrier swings to right or left or out ahead, throwing cobs clear of the machine and wagons. Let us prove to you how you can make big money this year, and also get higher prices for your own corn by shelling it *clean*.

Seed 10 Acres an Hour With This Seeder—It's 1/2 Cheaper

Than Best 11-ft. Broadcast Seeder Made

DON'T make a *poor* investment by buying an 11-ft. Broadcast Seeder when you can get the Peoria *Double* Seeder for just *one-half* the money, and you can actually do *THREE TIMES* as much work in the same length of time. Conditions of weather make no difference. The "Peoria" works just as well—wind or no wind. The

Peoria Double Seeder

is absolutely guaranteed to do better work than any 11-ft Broadcast Seeder ever made. It sows every variety of small grain and grass seed, uniformly distributing it. No thin or thick streaks are left behind. The secret of the Peoria Double Seeder is in the *helical* gear which runs with less noise than most friction drive seeders. It will last longer out of doors than any 11-ft. seeder stored. Feed is positive, no clogging, no valves or inside arrangement to bother—casts oats over twelve rows—one hundred acres can be sown in ten hours. With seeder you buy we give you

A Perfect Force Feed Grass Seed Attachment Absolutely FREE

HORTICULTURE

NORTHERN APPLES.

To the Editor of The Homestead:

One of the best of the old apple varieties which were planted forty and fifty years ago in northern Iowa was the St. Lawrence. This is a fall apple, which is remarkable for hardiness of tree. There are many of the old trees still left and in good bearing condition, and in all cases it is noticeable that those who have the trees speak well of them.

The Plumb's Cider is another variety once very popular, which has the ability of retaining its old friends. When compared with newer candidates for favor they claim that it is hardier in tree than the Wealthy and that the fruit is a better keeper. Under the same conditions it will keep a month longer.

The Red Astrachan, for the north, was a success in some favored localities. It stood in the northeast, upon the timber lands, but farther west upon the open prairies it failed, through tenderness of tree. But those who admired it as an early summer apple were a numerous company and they will plant the trees even yet. Farther west, upon the cold open prairies, the Whitney No. 20 filled its place so well that people are very well satisfied with it. While not quite as good as the Astrachan in quality, it is about as large, and only a little later in season. The Whitney still retains its popularity, and in some localities it has been a money maker.

A great Dakota orchardist up at Hurley has had them to ship West by the hundred bushel, and found a very ready sale at remunerative prices, because there was no better fruit to compete. It is very doubtful if we ever outgrow the need of the Whitney, up along the danger line of apple culture. The Duchess has long been, and continues to be, the summer cooking apple for the North. Its season is the months of July and August.

Very hardy and prolific in tree, and of good size it is the one most valuable apple of its season. The city markets demand great quantities of this variety, and probably few others make so much money for the growers. It should only be planted in large orchards, where it can be handled commercially.

The Wealthy follows the Duchess in season, covering the next two months in the markets. Where grown far enough north it may continue in season through November. This is the most popular fall apple of the present day. But it is true of this, as of the Duchess, that there is a vast waste of fruit through lack of facilities for handling. A few trees are sufficient for the farm orchard, and the man who would make it a business should plant at least ten acres to secure crop enough for car lot shipments.

The Fall Orange is an apple which has been eclipsed by the newer varities. It was very popular forty years ago, and those who know it well still pine for it. It is not quite hardy enough in tree for all locations, but upon timber lands and the right slopes it will pay for care. It is well worth planting.

The Longfield, because of its abundant fruitfulness, is a September apple which holds its friends. It is a good cooker and if it did not have to compete with the Wealthy it would be largely planted. Still it is a good thing to plant a few of them, for in some years it will give a fair crop when the Wealthy fails. You know the old adage about having two strings to your bow.

As a good-sized cooking apple, iron clad in hardiness of tree, the Hibernal stands without a peer, but as grown in northern Iowa it is only a September apple. A hundred miles farther north it will last another month, and up in Manitoba, at its northern limit, it will keep with right care until spring. This variety is regarded and with good reason, as the one most valuable variety introduced during the last fifty years for the far North.

The N. W. Greening, that magnificent Wisconsin seedling, has great value. It is a little capricious in its keeping quality—some specimens will keep perfectly until spring; others upon the same tree will rot in October. That at least is the experience in latitude 42 and 43. It does better farther north. Many other varieties might be named—some of them having almost secured recognition as valuable, but they have such superior merits that the rest are negligible.

H.

A FAMOUS ORCHARD.

Forty years ago one of the great Iowa orchards was that belonging to Dudly W. Adams, Waukon, Allamakee county, Iowa. Mr. Adams was a very prominent man of his day, being secretary of the Iowa State Horticultural Society, and master of the state Grange. He was a man of ability, and of property. He removed to Florida some thirty years ago and died there about the beginning of this century.

But the evidences of his life and his influence are still thick at Waukon. In the suburbs of the city, to the southwest, is the farm where he had

Is Your Home Sheltered?

Save dollars by saving heat. A wind-swept home is a cold home. Shivering cattle take on no fat. Cold hogs make the smallest gains. Wind-tossed chickens lay no eggs. Protected gardens get the earliest start.

20% BIGGER GRAIN PROFITS

Grade Your Grain! You Will Coin Dollars!

Have you any realization of what grain grading and cleaning means in doubling up profits?. Have you heard about our great offer—a $2.50 coupon? Look into this matter NOW! Plenty of good farmers haven't yet found out how much they're losing by failure to grade and clean wheat, oats, flax, barley, rye, timothy and clover. Yet thousands of their brother farmers are today piling up big profits using the New Superior Grain Grader to get the best seed—*which means bumper crops*, and to clean the grain thoroughly—*which means no dockage at the elevator.*

The New Superior Grain Grader fairly *coins dollars* for you. It gives you fine seed which would cost you many times as much bought from your neighbor or the seed man. It removes all foul matter. As an instance, it separates all the oats from the wheat and grades it for seed in one operation.

You save the *screenings for feed* instead of *giving it away* to the elevator man and *then buying it back.*

And the elevator man must pay the very highest prices for the finely graded clean grain you deliver to him.

We'll prove by figures in our Free Books a saving of $59.30 on ten acres of wheat besides paying for the machine.

That's the style of the New Superior Grader—that's the way it makes you money. Get our books and *save the coupon below, good for $2.50 at your dealer's.*

$2.50 Waiting for You at Your Dealer's—

Yes, *better than $2.50 cold cash.* The coupon below, presented at your dealer's will save $2.50 in buying a New Superior Grain Grader—but that's only the start. Your profits will run up into the hundreds or even thousands every year, by the use of this machine.

Same Offer on Smut Cleaners The Owens Smut Cleaner, also at $2.50 saving. It kills smut in your oats and wheat—*or your money back.* That's our guarantee. 25,000 machines sold and not one returned yet! Get the book that tells all.

Grain Books FREE!

A. A. BERRY SEED CO., Box 703 CLARINDA, IOWA

his 100-acre orchard, and in the city library are books donated by his heirs. Among them is a complete set of the bound war volumes of Harper's Weekly. These books make very interesting historical reading to the student of civil war days.

But of his orchard, planted in hope and tended with faithful care, there is but a remnant left. There are about 100 trees, now some fifty years old, scattered over a great pasture lot. The land is now in timothy and evidently has been kept in this state for some years. The trees are gnarly, many of them show dead branches and other evidences of decay, but as a whole it is remarkable how much vitality remains. There was but little fruit at the time of my visit last September and the specimens to be found were inferior. But they seemed to be of the varieties recommended for the North fifty years ago—Perry Russett, Rawl's Janett, Plumb's Cider and Talman Sweet, Sops of Wine and Willow Twig.

The remarkable fact is that any of the trees have survived the long years of neglect since the orchard has passed into careless hands. Those who are familiar with the rewards of good care for trees—proper surgery and feeding—will concede at once the probability of paying crops from that orchard if it had been rightly treated.

Here we find vitality enough to endure the most killing neglect and still survive. The fact should and will raise the question in thoughtful minds, are we wise in sending all those old varieties to the scrap heap? The Plumb's Cider is a good-sized late fall and early winter sort, not as good in color as the Wealthy, but in other respects its equal. Talman Sweet is so good that it is to this day an apple that sells well and the market is never over supplied. The same can be said of the Perry Russett.

Apple growers ought to think of these facts. We run so greedily after every new thing and the imagination exaggerates the good qualities which we desire and expect them to have, that we forget our old friends. Many times we find ourselves grabbing at some horticultural shadow and dropping the valuable substance which we hold in hand. The survivors of that famous old Waukon orchard of D. A. Adams are saying something to us which we ought to hear and heed. They are loudly shouting, "Our survival through fifty years of neglect should prove to you that we are true friends, worthy a place in your orchards, and able to reward your intelligent care."

RED AND PURPLE RASPBERRIES.

There is this essential difference between the two: the purple or "dusty" berries grow new plants from the tips of the canes, precisely like the blacks, while the red raspberries proper make new plants by throwing up shoots from the roots.

The purple berries exemplify the law that the larger the berries and the more prolific yield the poorer the quality. The fruit is more acid than the true red berries, and its flavor less pleasing to the palate. In markets where there is an abundant supply of the reds, and buyers are educated to the difference, the purples are always the second choice. But in other places buyers are greedy for the purple berries, choosing them in preference to the blacks. They are superior to the blacks in this respect: they are more juicy and less seedy. The seeds are smaller and less prominent.

The purple berries are far stronger growers than any of the red varieties, and under good culture they will often make hedge rows, from six to eight feet tall. And the canes at the surface will reach to the size of broomsticks. The purple berries are a cross between the red and the black berries and have retained all the vitality of the strongest-growing black varieties. It is less work to grow the purple berries than to grow the reds, for the reason that the persistent sprouting of the reds makes constant culture necessary to keep them down. It is necessary to do this, for if they are permitted to grow at will you will have a thicket of bushes, but no fruit.

As usually grown the reds are allowed to form a row eight inches to one foot wide. This permits weeding, so that cleanliness may be maintained. The plant of the better, more painstaking growers is to cultivate both ways, leaving the plants in hills about one foot square. This is the ideal way, and while it involves more work it produces more fruit and fruit of a better quality than the hedge system.

Because of the lack of sprouting

Great Crops of
Strawberries
and How to Grow Them

IS a beautifully illustrated book of expert information written by America's most successful strawberry grower. DITCHING and SUB-SOIL PLOW

Write for Price
AGENTS WANTED
Larimer Company
Eola, Illinois

Take Your Choice

between a Rock Island "C.T.X." Universal and the commonplace kind of plow. They cost about the same. But *remember*, the "C.T.X." Universal means "fat" crops, while the common plow is apt to mean "*skinny*" crops.

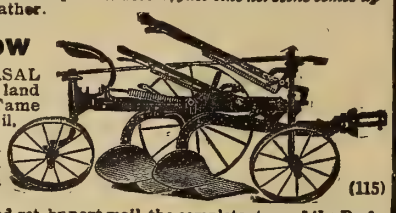
Beware of Air Spaces

Those innocent-looking air spaces left between topsoil and subsoil when plowing have been costing the American farmer MORE THAN ALL OBNOXIOUS WEEDS, BUGS, PESTS, SCALES AND PARASITES COMBINED. Air spaces completely *cut off* the water supply from below and cause crops to start withering and drying up the minute a hot, dry spell comes.

Get a plow that *doesn't LEAVE any air spaces*—the Rock Island "C.T.X." Universal.

Note the peculiar, corkscrew shape of this plow *bottom*. (Picture A.) The arrow shows how dirt travels—backward and *DOWNWARD*, not backward and UPWARD as in the ordinary plow. (Picture B.) The Rock Island Universal doesn't spill any dirt into the furrow; turns the slice clear over, without crimping. Lays it flat and smooth, at the same time pulverizing it thoroughly and burying all trash. Topsoil lies right against subsoil—doesn't leave fatal air spaces. Water comes up from below, *just like kerosene comes up your lamp wick*. It feeds the crop in dry weather.

A Real UNIVERSAL Plow



And don't forget, *this plow* is a UNIVERSAL plow—does perfect work in *any* soil on any land that's plowable. It walks right through Tame Sod, Heavy Clay, Sandy Loam, Mixed Soil, Stubble Fields, Old Cornfields, etc.

No wonder the Rock Island "C.T.X." Universal has become the sensation of the farming world. *Yet it costs practically no more than the average plow!*

WRITE! Send your name on a postal today and get, by next mail, the complete story of the Rock Island "C.T.X." Universal. All about how it's made; pictures of its different parts, etc. We will also send you the name of your home merchant who sells Rock Island Implements, so you can go see this plow and judge it for yourself. Just write these words on your postal, Am interested in plows. Then sign your name and address and send the card to

Rock Island Plow Co.

Great New Everbearing Macatawa Blackberry

This year you should grow berries. It's the thing that pays in commercial fields and in gardens. And to make your work count for the most, grow the heaviest yielders, the biggest, meatiest, best-flavored berries.

Macatawa Blackberry has all these qualities, and more. It's a brand-new sort, a cross of Eldorado Blackberry and true Giant Himalaya Berry. The berries are extraordinarily large—3½ inches around one way, by 3½ inches the other. They begin to ripen July 1; the big pickings come just after July 1, and you get ripe berries until frost.

Berries are sweet even when green, free from core and seeds, meaty and altogether delicious, wonderfully good to look at, and just as good to handle, to ship and to eat—high-priced and profitable.

Plants Begin Bearing the First Year

and yield immense crops afterwards. They are absolutely hardy in 40 degrees below zero. Macatawa plants $1 each, or 6 for $5. Only 6 to one person.

Send today for the 1913 Berrydale Berry Book. Full of valuable Berry information. Contains true descriptions of the Macatawa Blackberry, of Himalaya Berry and many other profitable berries you ought to grow in your garden or fields. Let me have a card for the book today.

Wm. Stahl Sprayer Co., Box 932 Quincy, Ill.

tendency the culture of the purple berries is easier than that of the reds. This difference is so pronounced that the purples may be grown and sold at a profit, at five cents per box less price than the reds command. But as a rule there need not be that difference in price; in fact, there is not usually any difference, and this makes the purples more profitable for the grower, but, as intimated above, it is a matter decided by the condition of the market.

The three most vigorous growers of the purple berries are no doubt the Columbian, the Cardinal and the Haymaker. These all have this helpful habit, which is worth considering by the grower. They may winter kill half or two-thirds of the way to the ground, and yet they will send out branches and fruit heavily in spite of the killing.

The reds are as a rule more tender than the purples and less likely to yield a full crop, yet the difference is not so great that the berry grower need hesitate where his special market requires the red berry. There are many varieties of the reds, and some growers choose one kind, and some another. There is no doubt such a thing as adaptability to certain soils. It is well for one who proposes to plant largely to ascertain the experience of his neighbors before he decides what variety or varieties to plant. Among those adapted to a wide range of soils, and consequently the favorites of the large growers, are the Cuthbert, the Miller, the Louden. There are others almost as good, and preferred in some places to those named.

If one is growing a few of the purples and desires more plants he must take pains to tip them in August; that is, he must cover up the tips of the new canes when they come to the ground. Under ordinary conditions of culture he will get a few plants, but not enough to help much. You will get ten times as many if you put them down.

Among the reds you can get an abundance of new plants from the suckers. But beware of this in planting. Choose only the largest and strongest plants. Half of the weak shoots will fail to grow, or they will be so low in vitality that it will take them two or three years to make strong plants. And if you are to make a success of your venture you must avoid misses in your rows. More failures in making a start result from this cause than from any other. The majority of our smaller towns are poorly supplied with red raspberries, and they retail readily at twenty cents per box. Needless to say it is a paying crop at that rate.

THE FARMER'S TRUCK PATCH.

To the Editor of The Homestead:

The one who goes into trucking for a business may sometimes fail in these days. In the first place he may lack a plentiful supply of fertilizing material of the right sort; his land may not be early enough to let him in for the best prices; he may not be located where the markets are wide enough to take all such produce at paying prices, or at any price; and again he may not be a good salesman.

But the farmer who runs a small truck patch in connection with his other farm operations, can hardly lose out. The grocery and produce men in his nearest home town who have dealt with him for many years will always favor him in their buying, since he is always a heavy customer. If his farm is stocked as it should be he will have a plentiful supply of home-made manure to work with. On a farm of considerable size there is usually a diversity of soil that will enable him to pick and choose—the quick, warm soils for the early stuff, and the heavier, stronger soils for the later products. He can grow only such truck crops as can be fed out on the farm to good advantage when the market is too dull for selling. He can hardly play a loser provided he uses fair judgment in the selection of his products.

The farmer will dabble only in those crops in the truck line that can be handled with ordinary farm tools without too much fine hand labor that is not to be spared from the regular farm work. Potatoes, both very early and late; early and late cabbages; beets, bagas and such other root crops

Get My Special 1913 Bargain Prices on Evergreens

If you are interested in an Evergreen Wind-break, by all means send for my special 1913 evergreen book, which will show you how you can move your home 300 miles further south climatically, how you can save one-half of your fuel and feed bill by protecting your house, barn, and feed lots with a wind-break of Gilbertson's Famous Evergreens.

Gilbertson's Famous Evergreens Grow Where Others Die

It's All in the Roots.

The secret of my famous Evergreens is in their thoroughly developed, fibrous root system, this is brought about by scientific and thorough root pruning, and transplanting, that is why my evergreens will live when transplanted into your windbreak row when all others fail. I have more successful Evergreen groves to my credit today than all the other nurseries combined.

Send Me Your Farm Plans.

Send me a rough sketch, showing the location of your house, barn, feed lots, etc., and I will help you plan your windbreak the proper distance from your buildings, and figure out exactly how many trees it will require. My Free Evergreen Book will tell you a story of 500 miles of satisfied customers. Remember it is free.

"Pedigreed"
FRUIT TREES
Quality and Quantity

In buying fruit trees you ought to know the blood that is in them.

We propagate our stock from known trees, selected because of their superior fruit and productiveness. Our trees bear young and produce big regular crops of fancy fruit, because they are bred from parents with a record for both quantity and quality. Observe orchards of ordinary trees, half of them are barren, or producing poor quality. You can save three to four years, and have every tree a producer of fancy fruit, if you plant our pedigreed fruit trees.

Free Book Tells

"Pedigreed Horticulture," our new book, telling of the way we grow pedigreed trees, and why they are the only kind to plant. Write if you are interested in raising better fruit and more of it in half the time.

CLOVER

Our New, Wonderful Book Entitled
"Clover and How to Grow It"

Thousands of farmers have not been able to get a clover "catch" in the last few years. They have wondered why. Our book tells you. It is full of $cash money$ information. Tells you how to put in the necessary bacteria that your soil lacks on account of continual cropping and how the soil is inoculated. This process provides the necessary bacteria that draw the nitrogen that you lack, from the air. Send for this book. Why not start a soil enriching campaign on your farm? Clover wonderfully enriches the soil. We can help you to get a fine stand of Clover—tell you how to meet your particular soil conditions No cost or obligation on your part. We spend fortunes to tell farmers about "Nitragin" inoculation. Our book "Clover and How to Grow It" is free to you though the information it contains is worth hundreds of dollars to farmers. Get the big $cash money$ crops—make your oat and corn land yield double crops. Send for this new, original free book now. Send 10 cents in stamps to cover postage and handling.

GALLOWAY BROS.-BOWMAN COMPANY.
Box 104 G, WATERLOO, IOWA.

MORE POTATOES PER ACRE

Think of finding one to eleven $5 bills in the furrow, on every acre you plant. It's been done many times. Plant the spaces you skip, sell the potatoes, and you've got the money. No extra land, no extra work. It costs no more to prepare ground, fertilize cultivate, spray and dig a perfect stand

IRON AGE (Improved Robbins) Potato Planter

This machine soon pays for itself and yet puts real money into your pocket. One seed piece in every space and one only. Uniform spacing. No injury to seed. that are good to feed out on the farm if the market is dull, will be among his leaders. He is absolutely safe in the production of these in quite large quantities, for he has a farm factory that will work them all up to advantage, when the market does not offer him what such stuff is worth. A good warm piece of soil can be found on most farms for the extra early potato, and there is sure to be good money for the first early potatoes.

The tomato and the early head lettuce are two good crops, but require a little special outfit in the way of hotbed and cold frame for the starting of the plants in early spring.

There is nothing really difficult in this, and a good hotbed should be found on every farm in any case, as it means better living and more wholesome diet for the farmer's family. It also means an education in the finer arts of soil culture and intensive farming that every farm boy should learn, for undoubtedly the time is rapidly approaching when more intensive methods must be practiced on the land.

A hotbed sixteen feet long and of a width to suit the length of regular hotbed sashes, which are usually six feet long, will produce enough plants to run a good-sized truck patch. The back wall of the bed should be three and one-half feet high; the front wall a foot lower to give good slope to the sash, and allow them to slide down for ventilation without striking the ground in front of the bed. Set four posts on each side. Commence boarding down from the top. Set the top board level before nailing it. Pick a good, straight-edged board for this place. Nail on any old cull stuff below this, and it does not really matter if the boarding does not go clear to the ground, as it will be banked on the outside clear to the top anyhow. Have these posts on the outside, of course. Nail on a narrow strip the length of the bed, three and one-half inches down from the top edge of the back well; nail another such strip one and three-quarters inches down from the top edge of the front wall. These are to support the ends of the sash bars (of 2x4) on which the sashes are to rest, and on which they slide down over the front wall of the bed, but push up against the back wall, hence the difference in the height of nailing on these supporting strips. Have these walls two inches less than the six feet apart, so that the ends of the six-foot sash will project over the edge in front just enough to allow the fingers to catch on them when lifting the sash. Close up the ends snugly so as to be flush with the top of the sash, as it is at back. Bank to the top on the outside with strawy horse manure. Then haul a load of good warm horse manure with all its straw bedding and place in a flat-topped pile near the bed. It will get thoroughly mixed in loading and unloading. After two or three days in this pile it will regain its former heat. Then place evenly in bed and tread down thoroughly while placing. Thirteen inches deep is enough for the spring hotbed. Put five inches of good rich garden soil on top of this. When the whole is well warmed through, the bed will be ready for the seeds. Plant in rows four to six inches apart running across the bed. Tomato and head lettuce will undoubtedly be the main plants grown. Sow only a third to a half of this space to these seeds. You will want the rest of the space to transplant into later. In the meantime you can grow a few early radishes and lettuce in this vacant space for table use at home. When the tomato plants are putting out the fourth leaf, say three inches high, transplant to three inches apart in this vacant space, and also where the seedlings were grown.

Keep a thermometer in the bed. Don't let the day heat get much over 80. Regulate by sliding the sash down. Cover with quilts or blankets nights and cold spells. Head lettuce can go out into the open ground as soon as the ground is in good condition, as the frost will not hurt them. When the transplanted tomato plants are five or six inches high, say about the middle of April, it is a good plan to have a cold frame near by to transplant them into in order to get hardened for the outdoor life that is soon coming to them. No artificial heat is attempted in this cold frame, simply a protection from frosts and cold spells by covering with canvas, and banking up on the outside. The growth will be slow at first in this frame until the sun gets warmer as the season advances. It will then become quite rapid, and by the time the danger of frosts is over and they are to be set in the open ground, say 10th to 15th of May, they will be twelve to fifteen inches in height and many of them budded for blooming.

There is good money in a half acre of tomatoes. The picking is scattered along through the season, and is not at all burdensome. Some well-rotted manure should be used under the hill when planting. W. D. Boynton.

BRIGHTENING THE FARM HOME.

(Continued from page 3.)

washable draperies where they are nee

* * *

A little beauty, a cheap convenience, do wonders to make the farm home or any other home "the best place on earth," to the family. It is best when all the members of the family circle take an interest and work to make things attractive. It is "sense rather than expense" that counts. If all help they feel a personal interest in staying at home to enjoy the results. If there is a really good reading light (say a strong round-burner lamp or the specially designed student lamps burning kerosene or alcohol); a reading table with plenty of elbow room for writing letters, studying school lessons, or placing good magazines, farm journals and selected books (this may be an old kitchen table varnished up or covered with a pretty dark cloth); and some musical instrument, a harp, mandolin or organ, if you do not care for the piano; then home will mean a pleasanter evening than the street in town to the boys and the girls will be glad to entertain their company there.

For the sake of the mother who does the cooking and of the whole family when the kitchen is used for dining, why not spend a few dollars for a two or three burner gasoline, alcohol or kerosene stove with a portable oven? All summer, and for winter suppers when the room is warm enough from the range fire now low, meals can be prepared without "cooking the cook" and roasting the farmer.

Muddy boots, heavy overshoes, sweaty overalls, rain-soaked coats, for the husband and children cannot be avoided. They must be kept somewhere until cleaned or dried, and too often they hang all along the kitchen wall, unsightly and "odoriferous" from wet dye or perspiration. Any man has some spare time in winter, in "slack seasons" or on rainy days to "putter around a bit at odd jobs." And any farmer is sufficiently a "Jack of all trades" to be at least a "hammer and nails" carpenter. At an expense only of the lumber one can build a vestibule to the kitchen door, large enough for a row of hooks along one side and a wash bench and mirror on the other, with a big shoe box beneath. Here the soiled clothes and extra coats can hang and the men have their "wash up" before meals without trouble. Another suggestion of value is that this vestibule will protect the kitchen from cold drafts when the winter winds howl. The wash room problem could be met in another way, as one family did. A large closet, the size of a bath room, was built out from the kitchen and a curtain hung in the doorway. It had two opposite windows for a good circulation of air in summer. The open doorway kept it warm in winter.

Can you think of any better way to "brighten" the farm home in summer than adequate screens of wire netting or even "mosquito bar" at every single door and window? An unscreened bedroom window must be kept closed in summer, else the "skeeter bugs" come uninvited and do their worst, which may be very bad! A kitchen door screen with unpatched holes can undo the good of perfect screens over the balance of the house, for flies flock to the luring odor of good things to eat. I know personally a farmer's wife who, weary with cooking a hearty meal, stands by while the rest eat and waves a leafy branch above the table to shoo away the flies. No one fans them away when at last she has her belated meal! An hour's time and a little money to repair the screens would have saved her hours of weariness. Nor is that all. Once we considered flies only a tickling nuisance and a necessary evil. Now we know they breed in filth and feed daily in manure piles and swill barrels and that this sticks to them. A single fly can carry germs of typhoid or dysentery to a farm home as easil as into a squalid, filthy city tenement. Keeping all flies out is best; "swatting" them as soon as they appear is next best.

Another thing needed to "brighten" many farmsteads is to do away with the summer odors of an open swill barrel beside the kitchen door, a barrel of soured rain water breeding mosquitos under the eaves trough, and a pig pen too near the house. The water barrel can have a screened lid to keep the insects from laying their eggs and frequent emptying and rinsing will prevent souring of the water. The pig pens can be moved farther (I know of one not over fifteen feet from the kitchen it scented.) Covered metal buckets or cans or barrels for slops can be shut up against flies and scalded after daily emptying, with boiling water.

A room that has a faded or soiled wall paper that you cannot afford to replace can be made more cheerful at little cost. All the household and general magazines are now using full-page pictures and covers made by artists of high repute. Get a roll of plain dark green ingrain wall paper and either cut it into panels or tack it in one long strip as a frieze around the room about four or five feet from the floor. This makes a charming background or frame for pictures. Go over your old magazines or books and clip pretty pictures of landscapes, birds, people, or whatever suits your taste. Many picture postcards are worthy of a place also, and some calendar cards are artistic. These pictures can be pinned or pasted to the background. Some like also to clip poems, brief stories or anecdotes and pin them up in sight while they do mechanical work like mending or dish washing. One of my friends memorizes choice selections while she irons.

Rugs can be made cheaply of woven rags of solid colors in stripes; or taken to town to have "fluff rugs" woven from any old carpet. One woman dyed a faded rug with hot dye applied with a brush while the surface was wet from a washing in hot soapsuds. Another made a rug from her parlor ingrain carpet by turning back a hem half a breadth deep on all four sides. This made the size right and made the rug heavy enough that it was not easily "kicked up." The ends she bound with a cheap braid terminating in a knotted fringe of the color predominating in the rug.

Where the floors are bad the cracks can be filled and three coats of paint spread on; a hardwood border can be newly laid for two feet from the walls; imitation of floor veneer, a canvas back with the surface painted to resemble grained wood, can be had a yard wide, for twelve to twenty cents, and is laid like oilcloth; or matting can be bought for the borders. Housecleaning with rugs is easier than with carpets; the house is kept more sanitary, and most people consider it prettier. A good carpet sweeper or a hand-power vacuum cleaner will do wonders to keep them nice and fresh without lifting.

Short-horns as Milk Producers.

By B. O. Cowan.

FROM the very origin of the breed Short-horns have had two qualities to commend them to the favorable consideration of farmers and stockmen, and it is this dual capacity for beef and milk production that has made them so popular. As beef producers they are known over the civilized world, but their dairy qualities, though excellent when properly developed, are not so well recognized and so need advertising and further development.

The early history of the breed furnishes many instances of cows that were great milk producers. One of the earliest breeders to develop milk production in his herd was Jonas Whittaker, and in consequence his cows were known all over England for their excellent dairy qualities and at the same time he had a good trade in beef bulls with other herds in the kingdom. Sir Charles Knightley developed a tribe known as Fawsley Fillpails that did much to establish the fame of Short-horn cows as excellent at the pail. The herd of Thos. Bates was bred for beef form and soon became the foundation head of bulls for both English and American herds, yet the milking qualities of this herd were so carefully cultivated that the cows had a reputation as milk producers that was second only to that of their beef quality. As a result of this intelligent treatment, cows in Mr. Bates' herd gave from twenty-four to thirty-four quarts of milk per day, and their descendants proved good milkers for several generations. In consequence of this the opinion gained currency that only cows of Bates blood are reliable as milk producers, and this belief is pretty generally prevalent at the present time. While this opinion is founded on facts, there are notable exceptions. Even Amos Cruickshank, who did more than any other man of his time to develop the fleshing quality of Short-horns, was not unmindful of the dairy quality of his cows, and in that marvelous herd of beef cattle were many matrons quite good at the pail.

Numerous instances can be given of excellent milkers among Scotch cows of others herds, both in Great Britain and America. The writer bred Short-horns for twenty-five years and has some good milk cows in the herd, but the best one was a twin daughter of an imported Scotch cow. This cow was a winner in the beef rings when she was young and when she became a matron she would give two or three gallons of milk per day more than her calf could take when it was four to eight weeks old.

A notable example of a good dairy cow of this line of breeding was recently given by English papers. The Short-horn steer, Golden Arrow, was champion at the Smithfield and Birmingham Shows. His dam was the Cruickshank cow, Beatrice 22d, also dam of the noted bull, Bandmaster, winner of first prize at the Royal. Beatrice 22d sold when nine years old for 220 guineas ($1,100) and at the time of sale her daily milk yield was fifty-seven pounds.

At the present day the large herds that supply the city of London with milk and butter are composed quite largely, and in some cases exclusively, of Short-horn cows, either pure breds or high grades. To some extent this is also true in New York and New England. The dairy qualities of English Short-horn cows have been more widely advertised than those of American herds, and in consequence it is generally believed that the former are superior to the latter. But it is the expressed opinion of Mr. F. W. Harding, who has visited and carefully studied nearly all herds in Great Britain, that the leading dairy Short-horn herds of Pennsylvania and New York are better than those of England. But as general statements unsupported by specific evidence are apt to be regarded as "glittering generalities" it will be necessary to give a few of the available records.

Pansy of Stranton, at the Michigan Agricultural College, produced 10,058 pounds of milk and 456.5 pounds of butter in one year and during the same time gained 324 pounds in weight. At the Iowa State College, Ames, College Bell 2d gave 7,554 pounds of milk in ten months, showing 4.3 per cent butter fat; and College Moore produced 517 pounds of butter in one year. Florence Airdrie 6th, owned by Nebraska Agricultural College, produced 10,438 pounds of milk and 494 pounds of butter in twelve months and her calf of that year sold for $200. During a four-year test, from 1903 to 1906 inclusive, she produced 35,575 pounds of milk and 1,763.7 pounds of butter, an average of 8,893.8 pounds of milk and 440.9 pounds of butter during this period. Mamie Clay, owned by Innis & May, has a record of 13,232 pounds of milk in one year and an average of 11,127 pounds during a four-year test. At the New York State Fair, 1909, during a two days' test conducted by Prof. H. H. Wing, Juliet, two years and five months old, gave seventy-eight pounds of milk, showing 4.22 per cent butter fat. She won second prize in competition with the dairy breeds and lacked only .03 per cent of first place. Lula, owned by Missouri Agricultural College, under an official test of twelve months, produced 12,341 pounds of milk and 605 pounds of butter.

The best record of any Short-horn cow is that of Rose of Glenside, made under the auspices of the Pennsylvania Agricultural College. During a test of twelve months she produced 18,075 pounds of milk and 735 pounds of butter, an average of two pounds of butter per day, and 49.5 pounds of milk. This cow is owned by May and Otis, Granville Center, Pa.

During the year 1912 a new butter record was made, and it is the best ever scored by a Short-horn cow. It was made by a cow owned by Mr. Aver, of New York, Rose 3d, I think, is her name. In twelve months she produced 15,592 pounds of milk and 531 pounds of butter, showing her milk to be very rich in butter fat.

The essential characteristic of Short-horns is beef, but a beef breed that can show a herd with more than forty cows with milk records ranging from 10,000 to 13,232 pounds is worthy of the careful consideration of men who want cows that will pay their way as dairy animals, aside from their ability to produce profitable beef animals. Such cows are well suited to present-day farm conditions and the demand for such is rapidly increasing, and the men who are producing cows with good milking qualities and acceptable beef form will have a profitable market for their surplus. The motto of Short-horn breeders should be beef and milk and not milk at the expense of beef.

The agricultural appropriation bill, when reported to the house, probably will carry an item of $450,000 for the work of the office of farm management. The appropriation for the current fiscal year was $300,000, an increase of more than 100 per cent over the preceding year. The demands from all sections of the country for the privilege of co-operating with the farm experts of the department of agriculture are so numerous that the proposed increase will not be sufficient to meet all of them.

The first shipment of hay by parcel post was when a "bale" was mailed at the Bucklin, Mo., postoffice by Fred White, a local hay baler. The bale was an exact facsimile of a large bale and weighed two pounds. The postage was eight cents.

The above illustration is a likeness of one of the fifty-five great Hampshire sows to be sold in the sale of A. L. Goodenough, Morrison, Ill., January 27th. See page 44.

Don't Lose Another Hog—You Just Try Merry War Powdered Lye

If an epidemic of hog cholera should break out in **your** neighborhood, what assurance have **you** that it wouldn't attack **your** hogs? How are **you** fixed to prevent that dread disease from killing off **your** hogs like flies and wiping out **your** pork profits? Be on the safe side—don't wait—hog cholera breaks out suddenly—**ravages** and **kills** quickly! You **can prevent** it—easily and at a very small cost. Just mix with your hog feed a little MERRY WAR POWDERED LYE. (Directions on every can.) **Feed twice daily.** It's the **proven preventive.** Thousands of practical hog raisers and farmers **know** this by **actual experience.**

Read These Convincing Letters

J. E. Vawter, Beverly, Kans.—"25 hogs lost 1 mile east; 60 hogs lost 2 miles north; 20 hogs lost 2½ miles south of me, but I used Merry War Powdered Lye and escaped loss."

Mrs. Joseph Giesken, Parnell, Mo.—"After we began using Merry War Powdered Lye we never lost a hog."

Don't Experiment—Refuse Substitutes

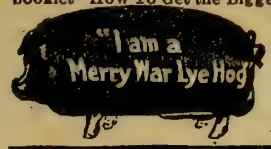
Don't be persuaded to try an ordinary, old-fashioned lye as a possible preventive of hog cholera. At best, it would be a doubtful, perhaps a **dangerous** experiment. MERRY WAR POWDERED LYE will **not** hurt your hogs. It is the specially prepared lye that is **safe** to feed to hogs as directed on every can, and **there are no substitutes.**

MERRY WAR POWDERED LYE is not only a **safe preventive** of cholera, but it is also the best hog fattener, and all 'round conditioner the world has ever known.

Users say it positively destroys worms. It keeps the hogs on their feed, makes them fat and sleek, skins free from scurvy and keeps the digestion in such perfect condition that every pound of feed is changed into profit making flesh and fat. One week's trial will convince you.

Prove This For Yourself. MERRY WAR POWDERED LYE is for sale at most dealers, 10c per can (**120 feeds**). It is convenient to buy in case lots—4 dozen cans, $4.80. Costs only **5c per hog, per month** to feed regularly—by far the best and much the cheapest hog insurance you can buy. If your grocers, druggists or feed dealers' can't supply you, write us stating their names. We will see that you are supplied; also send you FREE a valuable booklet "How To Get the Biggest Profits From Hog Raising."

Order Direct from us in case lots—4 doz. cans, $4.80—if your dealers' won't supply you.



Which Kind Do You Want?

$200

Takes possession of a fertile quarter section in

Southwest Kansas

There's not much vacant land left in Kansas. The five southwestern counties have remained unsettled and undeveloped because of inadequate transportation. The Santa Fe is building new lines to serve this territory, and thousands of farms next season will be put to creating wealth. This is your opportunity to get a good Kansas farm cheap. The terms are advantageous, the results certain.

If you had taken a Kansas farm ten years ago and developed it with intelligence and vigor, you, too, would now be lending money to Wall Street, as other Kansas farmers are doing. You, too, would have a piano in your parlor and an automobile in your barn.

The next best thing is not to lose this opportunity of securing a quarter section of this splendid wheat land.

Besides wheat, oats and barley, you can get good profits out of speltz, milo-maize and kaffir-corn fed to your own stock. Hogs thrive on milo and kaffir, and disease is unknown. Western Kansas farmers find peanuts a splendid hog feed, easily grown and easily fed. Broom corn brings fancy prices, and potatoes, garden truck, fruit and alfalfa will all do well for you.

There are some flowing artesian wells in this territory, and everywhere that wells have been put down water comes to within thirty to sixty feet of the surface. Irrigation by pumping will doubtless be commonly practiced, and the tremendously increased yields will pay big dividends on the small investment required for gasoline or oil driven pumps.

The climate is pleasant and healthful. Your boys and girls will find good schools. Churches, social clubs and farmers' institutes are being organized. Rural telephones and free delivery are coming in. In every way development is rapid, and only a few years will give you every advantage that older communities have.

You can secure a quarter section (160 acres) for only $200 down. The price is $10 to $15 an acre. The terms are astonishingly liberal. Only one-eighth down and one-eighth each year after the second year, with interest at only 6 per cent. You see you have two full seasons before a second payment on the principal is required.

For further information write for illustrated descriptive folder containing map and full details.

How to Do Tile Draining.

By J. C. Cowley.

AFTER you have made up your mind to drain a piece of land, first seek a proper and suitable outlet, which is all important and something to be studied before and after the work is done. I will refer to this particular point later on. Second, take a practical survey of the land to be drained, determine the location of the drains to be laid. A man who is used to the land will be able to do this better than some stranger.

There is one thing certain, that water will always finds its lowest level. Don't try to cut off the water by draining across the hill, for the water will flow under the tile, especially if your tile are not down to the proper stratum. There are three stages of water on land—surface, capillary, gravitational. This is something all farmers should study. In what stage is the water doing the most damage? Some people try to tell you how deep, how far apart, and what size tile to use, but that I cannot do without knowing something of the nature of the land, the amount of water to be taken off, the fall and the number of acres to be drained. I will do what I started to do—tell you how to do the work.

Now, there are two names for drains—"mains" and "laterals." The work you are about to do may require more than one main. Whatever size tile you use for your laterals, the size for the mains should be larger in proportion than laterals. Never use more than one outlet in a piece of work if you can possibly avoid it. The more drains you lay into an open ditch, the more trouble you have in keeping them open. Have one main sufficient to carry all the water off, and when laid, build up the mouth so that it can't wash away.

I have given the idea of laying out the work, now I will tell you how to do it. First, draw a line taut from open ditch where you intend to start your main. Dig about fifty or seventy-five feet with ordinary ditching spade, or about twelve feet past your first lateral or turnout, or submain. Make width of top to suit operator, for six-inch main about fifteen inches, for four-inch main, about twelve inches, for three-inch main, about ten inches. Slant the sides of the drain with your first spading so as to continue the slant on each side to correspond to the depth of the drain and size of pipe. This is called the first "bench," and each piece of dirt taken out with the spade is called a "split." What you have in the drain after digging, is called "crumbs." You may take them out with an ordinary shovel.

This done, now take a post spade and commence again at the open ditch. Dig another bench as before. Dig just as far as you can; if you use a "crummer" this should be used after digging about six or eight feet, having the crummer laying by the the side of the drain within your reach. It should be a flat-bottom crummer. The last bench commence as before at open ditch. This last bench must be right, with a nice straight uniform bottom and a graduated fall. Dig the sides of the last bench just large enough for the crummer you are about to use. It requires a crummer for whatever size tile you are using.

Now comes the laying of the tile. Have the tile laid with the ends to the drain about two feet from the edge. Now take your pipe hook, stand on top of ground alongside of drain, and lay in pipe very carefully, so as not to break. After one has done this a few times, he will be surprised how fast he can lay them. Never straddle the drain when laying the tile; you will knock dirt in the drain. When laid to first lateral, or where you wish to make the first turnout, make the same to commence on a line with the center of one pipe in main, dig same as main, about twenty feet after you have cleaned out and left the bottom about one inch higher than the main. Lay back in the main the pipe you took out when starting the lateral. Lay in one pipe in lateral tight up to main pipe, mark around main pipe with pipe hook just enough so you can see the mark. Then take a very small pointed hammer, pick a hole in pipe to fit in lateral. You can do this on bank, and with a little practice, you can make a very good job. The makers of tile make junction pipe, but they are never the right angle. After making the joint, lay a few pieces of broken tile on pipe joint around joint. When filling in drain, take a manure hook, pull in dirt, leaving the same loose on the pipe. Never get in the drain after you have laid the tile. The best dirt to put back on tile is the last dirt dug out, the filling done in a manner so that dirt will roll on to the tile. Don't put it in so that it will drop direct from the top of the bank hard enough to break the tile, or it may give you trouble.

In laying drain it is well to strictly adhere to the following rules: (1.) They should have a sufficient outlet. (2.) The drains should be dug, tile laid and covered the same day. (3.)

ALBERTA

The Price of Beef is High and so is the Price of Cattle.

For years the Province of **ALBERTA**, (Western Canada), was the Big Ranching Country. Many of these ranches today are immense grain fields, and the cattle have given place to the cultivation of wheat, oats, barley and flax, the change has made many thousands of Americans, settled on these plains, wealthy, but has increased the price of live stock. There is splendid opportunity now to get a

FREE HOMESTEAD OF 160 ACRES

(and another as a pre-emption) in the newer districts and produce either cattle or grain. The crops are always good, the climate is excellent, schools and churches are convenient and markets splendid in Manitoba, Saskatchewan or Alberta.

Fine Hunting and Fishing near. Bring your family—eat Florida Oranges and enjoy the balmy June weather in winter time. Special low rates for families.

Write THE HILLIARD INN, Hilliard, Florida.

Always commence laying tile at lower end of drain. (4.) Never dig open any more than you can lay tile in and cover the same day, always putting a spade in front of the last pipe we laid for the day. (5.) All drains must have a graduated fall and uniform bottom. Never dig your drain in bottom larger than the pipe you are going to lay. If the fall of the drain surface is broken, don't dig the same depth all the time. If you do, the bottom will be like the top. (6.) Every tile should be perfect in form, and if made of clay, well burned; if made of sand and cement they should be well cured. (7.) In laying the tile, take pains to fit all points closely, as with all care there will be sufficient space for the inlet of the water and closed joints will prevent the letting in of silt or washings. (8.) How to graduate the fall of a drain. Water is the best instrument. If you have eight or ten inches to the 100 feet, just keep the water running away from you to look about the same in bottom of drain all the time. If only two or three inches in 100 feet, or a back fall, and no water, then you must use stakes and line with a gauge arm. Be sure your line is taut and dry. Use no other but pure water cord, and set your stakes about twenty-five feet apart.

How to regulate the fall three inches to the 100 feet. With water set gauge in the drain. If gauge does not fit close enough in the drain to block the water, then puddle some clay around the sides of the gauge in drain. Then if you have water, and the bottom is finished even and smooth, the water will ripple on the bottom. In 100 feet with a three-inch fall, one and one-half inches in fifty feet and three-quarter inches in twenty-five feet. When the water reaches up to the three-quarter-inch mark on gauge and twenty-five feet back in drain without a ripple, it shows you have a true grade. Then when the water is up to the one and a half mark, the ripple will show fifty feet back, if to the three-inch mark, then 100 feet back.

Never use plow to begin drain with. There is nothing in it. You get loose dirt falling in the drain all the time and then if it rains, what a mess! Cut your drains with the proper tools, and you will have no trouble with the dirt falling in, and, besides, you can get close to the drain to lay the tile. When you commence the drain, lay the dirt on one side of drain, the one best to suit your hand. If right-handed, lay dirt on left-hand side. If left-handed, then on the right. Stack the dirt as close to the edge of drain as you possibly can, it will fill in all the better. Keep your tools alongside of the drain and within your reach at all times.

When cutting the drain, use a good taut line on one side of the drain and then commence to spade as though you meant business. No use to have a line on both sides, and no use to notch it alongside of line. You can be moving dirt while you are doing this. When you have had as much experience as I have had, you can dig a drain ten inches wide on top without a line, and dig it straight, too. Keep your tools sharp and clean. When not in use, keep them in the shade and out of rain. It pays well.

Don't try to dig a drain without a foot iron on your shoe. A blacksmith will make you one in a few minutes, but it generally takes them about an hour to make me one, and it costs me fifty cents. But they will save a good pair of shoes in one day, and besides you cannot get the spade in the ground if you don't use a foot iron.

In using a drain spade to dig a drain practice to use your foot on the inside of the spade. That is how we make them so narrow. And use the spade in front of you, and not down by the side of your leg. Of course, all drain spades have short handles. When finishing the bottom of the drain be sure when using your crummer to cut off every little bump in the bottom, and leave it smooth like a board. Always dig your drains in a straight and uniform shape, so the tile will fit tight in bottom, and not settle out of shape.

Leg weakness in chicks is often produced by feeding an improper ration. When the chick is fed a fattening ration altogether his body becomes too fat for the muscular strength of the legs to support. Feed plenty of bran to the growing chicks, as it makes bone and builds muscle. For leg weakness give quinine in water daily. It is made by putting five grains of quinine in a quart of drinking water. Bone meal, charcoal and green food should also be given.

Cockerels mated to pullets may do very well, but if they are mated to one or two-year-old hens they will produce stronger fowls. If one has pullets only he had better secure cock birds and mate with them. This will insure him more vigorous chicks.

Land cost him $600 $6000 profit now!

Mr. Hall, a former Michigan man, bought 100 acres of land in East Texas, at $10 per acre, a few years ago; planted 60 acres to peach trees; made a good living from melons and berries until trees came to bear—and *now* he is getting $6000 *net* from his sixty-acre orchard alone.

[Monkress Farm Jacksonville, Texas.]

You can not only buy lands at far less than yours would sell for; but you can raise more crops with the same effort and at less expense; because of the rich fertility of these lands and the milder climate, which cuts winter expenses *'way down*, along the

Cotton Belt Route in Arkansas and Texas

As Frank Federer says, who came here from Rhineland, Wis.: "I can raise here on $15 land as much as I could in Wisconsin on $200 land." S. N. Jackson of Piggott, Ark., declared that "This is better fruit country than in Tennessee; our orchard crops bring more money here, and there is a better market for what we raise." Jackson only paid $700 for his place. These lands won't stay cheap. They have already doubled in value since 1905; but even this year you can buy at $12 to $25 per acre, as good land there as you are farming now. And you'd have *every* advantage of schools, churches, close neighbors, good local markets, phones, rural free delivery, etc. This proposition deserves serious thought.

On the 1st and 3rd Tuesdays of each month there are low round trip excursions to Arkansas and Texas via Cotton Belt Route, allowing 25 days' time and free stopovers. Go on the *next* one.

Get our free books!

Written by a farm man who knows farming from A to Z. He traveled over thousands of miles in these sections to learn where the *real* farm opportunities were—the kind he knew *you* would grasp if you saw them. He tells you, in plain words, all about them. 100 pages and farm pictures. Send a postal today for your *free* copies.

1454 Pierce Bldg., St. Louis

COTTON BELT ROUTE

22 CALIBER HUNTING RIFLE FOR EVERY BOY

This Great Rifle

is over 30 inches in length. The barrel is bronze, 16 inches long and finely rifled. It has a built up steel jacket, giving it great strength and durability. The rear sight is open and adjustable and the front is a knife sight. The stock is made of fine walnut with pistol grip as shown. The gun has the hammer action and the shell is automatically thrown out when the barrel is "broken down" for reloading. The gun shoots 22 caliber long or short cartridges.

This is one of the finest rifles made. I want you to have one. All I ask is a little easy work. Write today and I will tell you about the gun and how to get it.

A. M. Piper, 133 Popular Bldg., Des Moines, Ia.

Mimbres Valley of New Mexico

No. 1

This is no ordinary irrigation proposition.

Its the best kind of irrigation, plus the best soil, the best markets and the best climate. The irrigation systems here are personally owned pumping plants, costing less than half what a Government or corporation controlled water right costs elsewhere, and making each man master of his own water supply; getting water just when needed and just as much as needed. This water is the purest in America and its source is inexhaustible. The land here is level, easily worked silt soil, free from harmful alkalis and wonderfully productive. The markets here offer the very highest prices. The section in which

Deming, New Mexico

is located is surrounded by vast mining districts which are entirely dependent upon Mimbres Valley for farm produce. Farm products here will always get highest price because there is no other nearby land suitable for agriculture.

The health-bringing climate here is famous the country over. Its pure, dry air and sunshine, work wonder cures. It not only offers a long-growing season and lowers the expenses of farming, but it offers an opportunity to gain health while making more money.

Picture No. 1 shows an irrigation plant supplying 1400 gallons per minute. Good irrigable land can be bought here now at $5 to $20 per acre and equipped with such a plant at a total cost of about $30 per acre. That's much less than you'd have to pay for irrigated land elsewhere.

Picture No. 2 shows alfalfa harvest on John Hund's farm. Mr. Hund says "alfalfa turned off six tons this year, which sold for $15 per ton—or $90 per acre! My bean crop made 1200 lbs per acre, selling at $6.25 per hundred or $75 per acre." Your investment of $30 per acre here could bring you such returns as Mr. Hund gets!

Prices of land here are low only because it was just three years ago that the great agricultural wealth of this section was known. Yet this section has all the advantages of a well settled place, because it has been built up by mining and railroad industries. Deming is the metropolis of Mimbres Valley: splendid city of 3000, with fine grammar and high schools, electric light, water and sewer system, paved streets, etc—as fine a town as you've seen, and good local market.

We don't sell land!

this organization is a body of farmers and business folks who feel so sure that this section can't be beat that they are spending money to tell you so—confident that YOU'LL want to live and farm here when you find out about the opportunity and the great advantages for you here.

On Square Deal Fence First

Send for this catalog and price list. See what it means to you to buy a fence woven at the mill that makes the wire.

Square Deal Fence is elastic, springy—made from wire that is hard but not brittle. The wavy strand wires keep Square Deal fences tight and trim the year 'round. The one-piece stay wires help support the fence—keep it from sagging between posts and from buckling at the bottom to let the pigs under—requires fewer posts, saving money, time and labor.

The Square Deal Lock—"the knot with a grip that will not slip"—locks every strand securely so stock can't spread the wires. No brittle welds to snap—locks are all self draining—moisture will not remain in the knot and rust the wires.

Drop Us A Postal Today—get our catalog, price list, local dealer's name and a high grade, four-section folding 2-foot rule—all FREE.

THE HAND SEPARATOR.

To the Editor of The Homestead:

There is no question that good cream can be produced on the farm by the hand separator and I believe it will be if the proper opportunities are had to value this cream according to its butter-making qualities. To the western farmer it has made dairying possible by making cream a marketable product that could be sold at the nearest railway station. It has also greatly reduced the expense of hauling the raw product to the factory, while the value of fresh skimmed milk on the farm can hardly be over estimated. But when it comes to the discussion of the handling and care of the hand separator and the care of the separator cream I am sure no one will dispute the fact that there is plenty of room for criticism.

In trying to sell a separator many agents impress the idea on the purchaser that it is unnecessary for him to have any facilities for cooling his cream and that the separator needs no washing, but can simply be rinsed with cold water. Such men are simply injuring the dairy industry. During my experience in handling hand-separated cream I have found that many patrons or producers are willing enough to do better if some one would only show them or explain to them how and why. In this part of the country this work has been sadly neglected, and yet the increased patronage and improved quality of cream supplied would more than pay for the extra work it would take for the creamery managers or cream agents to give full explanation to the patrons.

If a separator is run too slow while a full feed is given; if the milk is too cold or if the separator is so dirty that the milk tubes become clogged, a greater or less quantity of milk is likely to run in with the cream. The result of this is to produce unfavorable results in the butter especially in hot water. It is best to run a heavy cream, as this precludes the possibility of its containing milk and renders ripening more uniform. A 30 or 32 per cent cream is none too heavy, especially in summer. It will ripen better, churn more readily and produce a better flavored butter. Butter produced from such cream will keep longer and better and there will also be a smaller loss in the buttermilk.

Cream should be cooled as soon as it comes from the separator to a temperature of about 55 degrees. This is very important and a little neglect here may greatly impair the flavor of the butter especially if the milk from which the cream is taken is at all tainted or badly flavored. The separator should be located where odors and contaminating influences do not exist. The same farmer that will speak with horror of the filth and unsanitary conditions of the great packing houses will probably have his separator located in his cow barn and a very dirty and unsanitary cow barn at that. A small dairy house could be made cheaply and fitted to accommodate all the utensils and work necessary in the production of cream. The cans, pails, dippers, in short every utensil that comes in contact with the milk or cream should not only be thoroughly washed but should be immersed in boiling water for several minutes. The seams and joints in all utensils used should be filled with solder, plumb with the surface of the vessel, as these small receptacles form excellent breeding places for all kinds of germs. To many these precautions may seem unnecessary, but they are not, for analysis has shown that milk or cream put into cans that have been treated in this manner contains, a much smaller number of bacteria per cubic centimeter than does milk or cream from the same lot put into cans washed in the usual way.

The milk should not be allowed to stand in the barn or stable for any length of time. While it is true that milk will not be affected by odors as long as its temperature is higher than that of the surrounding atmosphere, the same is not true of germs. Therefore it is necessary to remove the milk at once to a place where the atmosphere is pure and the surroundings clean and free from flying dust. The morning's and night's cream should not be mixed until the latter has been thoroughly cooled.

The hand separator users are a vast throng and their influence should be used to improve their position. One of the most common causes for dissatisfaction with selling cream is the variations in the test. This is especially true when each can of cream is tested separately which is now considered the best method. It is quite a puzzle to the average man who has not had much experience with cream separators to understand why his test varies when the same separator run by the same man is used all the time and the cow's feed is not changed. but the tests do vary and this fact does not indicate that careless testing is being done as it is practically impossible to run a separator under farm conditions without having the cream vary, in fact if the cream test were always the same it would be more suspicious that when it varies slightly. The common causes are: Variation in speed of separator, variation in rate of feeding separator, amount of water or skim milk used for flushing bowl, changes in per cent of butter fat in milk, changes in cream screw. The higher a separator is speeded the greater the amount of

GALLOWAY SAVED HIM $45.00

Read this letter sent to me from P. H. Sells, of Garwin, Iowa: "We wore out a high-priced ——— separator which is the only kind we ever had and I would not give this Galloway for a half dozen high-priced separators, and they sold me their No. 1 for $65.00 and asked me over $100.00 for the size of your No. 14, so I saved $45.00 by buying your No. 14 and think we have a better one."

I have hundreds of *other* letters to *prove* that the Galloway

Bath-In-Oil Cream Separator

is the equal of any on the market at any price, and I save you $20 to $45 *cash.* I give you 30 to 90 days' free trial to *prove quality.* "I have never found one as well constructed, as close a skimmer" is the comment of Cornelius M. Hunter, of El Reno, Okla. Theodore Casper of Dodgeville, Wis., says he "wouldn't trade it (the Galloway) for any of those high-priced separators." So, any way you look at it the Galloway takes the banner for *Quality and Price.* Send a postal today for my separator book—my special offer to 10 or more men in every township, and I will also send my big 5-color catalog of my general line, new handsome, complete, truthful, convincing—all free and postpaid. Write me today. Address

skim milk thrown out and this results in giving a smaller amount of higher testing cream, a low speed gives a larger quantity of thinner cream. It is a very easy matter to vary a pint or more in the amount of water or skim milk used for flushing and this alone may be sufficient to change the test of cream 2 to 5 per cent.

William Sorensen.

FEEDING SILAGE TO DAIRY CATTLE.

To the Editor of The Homestead:

Silage is relished by all classes of dairy stock. Its natural function in the ration is to replace the grass of summer when a substitute must be found and to replace root crops as they are sometimes fed during the winter season. The former is accomplished very nicely in that the health, tone and vigor of the cows are kept up splendidly and the young apparently grows as rapidly and thrifty when fed silage as when on pasture. The superiority over root crops lies in economy and ease of handling. Silage is equally valuable for feeding purposes as root crops when they are compared by weight. The yields per acre are practically equal and the cost of silage only one-third as much. In handling at feeding time there is less work with silage in that roots must be run through a cutting machine and silage is ready for use as soon as thrown out of the silo.

Convenience and ease of handling should be sought in feeding silage. When it is considered that the greater portion of the natural moisture of the corn or other silage crop is stored up in the silage it is easy to see that an immense amount of weight is to be handled. Usually, some sort of a carrier can be arranged for carrying silage from the silo. Various means are employed for this purpose. Some barns are equipped with automatic carriers. Others have a large box mounted on two or four wheels, being so constructed that silage can be thrown into it from the silo and taken out at the bottom with a shovel or fork. It is positively too much work to carry the silage any distance for a number of cows. A great many miles are traveled unnecessarily every year by men who feed in that manner.

There need be no misgivings concerning the use of silage. When a man considers that it contains the same qualities as green grass he can feed it without producing ill effects of any kind. Very naturally a small amount should be fed at the beginning. This amount may be increased as the animal shows an appetite for it and her physical condition will permit it. In opening the silo for use the upper surface usually is found to be spoiled. That portion should not be fed, as with other spoiled feed it is very likely to cause indigestion. The grain in it may be utilized by throwing the discarded portion to the hogs and allowing them to work it over and pick out the grain. One of the factors in keeping silage from spoiling is to feed off a uniform amount daily. It has been calculated and experience has borne it out that if the level is lowered two inches each day there will be no perceptible spoiling. Some inexperienced men have made a mistake of leaving the silage standing higher next to the wall. This provides for a larger surface to be exposed to the air and for a longer time. Naturally some spoiling results which could be avoided by keeping the surface level at all times.

Silage does not taint the milk of cows to which it is fed. Numerous criticisms have been made on that ground, yet tests in sanitary and other dairies have proven that the criticisms are ungrounded. However, it is not best for the cows to have silage in their mangers during milking time as there is a possibility of the fresh, green odor that rises from it to get into the milk. A general and very satisfactory practice is feed the grain immediately before milking. As soon as the milking is finished the silage is fed and after it has been eaten up the hay is put into the mangers.

A careful feeder quickly learns the amount each cow will eat or should have. This, of course, depends upon the size of the cow, the length of time she has been giving milk and other purely local factors. In a general way it may be said that a cow giving a full flow of milk will eat about forty pounds per day divided into two feeds. It is well to bear in mind that a portion of the silage is composed of grain, especially if it is corn silage. It is estimated that ordinary corn silage be decreased.

What is best to feed with silage is asked by beginners everywhere. It is to be granted that silage will not make a complete ration by itself. The greatest value is for its succulence in keeping the heavily worked system of the cow in health and vigor. Corn silage lacks in protein which is necessary in composition of milk. Protein is furnished abundantly by good alfalfa or clover. The concentrated feeds, such as oil meal, cottonseed meal and gluten meal, are high in protein and may well be used in small amounts to supply the deficiency in case protein is not supplied in the hay. In this as in other factors local conditions largely govern the operations. A herd of cows that has probably produced the highest yearly average of all herds managed under practical farm conditions was fed for seven months on corn silage and alfalfa hay with from six to eight pounds of mixed grain per day.

Silage may well be fed to the bull, to the calves and to the dry cows. The bull relishes it and it has the same beneficial effects upon his health. Besides that just as with the cows it is an economical practice to feed it. For the calves it keeps them growing, keeps the coat soft and shining. Dry cows often need little in addition to silage. It has the effect of cooling out their systems and getting them into condition for a heavy lactation period to follow. With all these classes of stock the silage may be fed in the manner most convenient, provided there is regularity and system used in so doing. With the calves it is not a bad practice to place the silage in the manger first and to place the grain upon it, and then to feed hay later. This plan may be followed with the bull also. In the case of dry cows if they are running in a yard or shed it is just as well to feed them in a long, open bunk or manger. Care must always be exercised that no more is fed than is cleaned up. Should any remain from one feeding it should be removed as it is certain to sour when exposed to the air.

H. E. McCartney.

WINTER DAIRYING SUCCESS.

To the Editor of The Homestead:

To be successful with winter dairying and make the most money while the price is high, we must first have comfortable stables. They must be neither too warm, nor too cold, and, particularly, must they be well ventilated.

Water should always be accessible to the cows, and heated in some way, not very warm, but just enough to take off the chill.

It is the customary practice on some farms to drive the cows out and cut a hole through the ice on the pond or stream, as the case may be, and let them drink under the various conditions all they want in any kind of weather. Sometimes on a very cold day they will be too cold to drink and start back for the barn without getting a single drop of water. Next day is sometimes too stormy for them to leave the stables, and thus they do not get water for two or three days, perhaps. Cows in milk under such conditions of living and management could not by any means give a paying quantity of milk. Even when butter is selling for thirty and thirty-five cents per pound in winter time, it would be very difficult to make a dairy pay when the cows are watered thus.

In cold weather the cows should be turned from the stables only long enough to clean the stables properly. When turned out, especially upon a cold day, they should have their water supply before going out, so that they will not need to go to a tank of ice water to satisfy their thirst, and thus they will not suffer ill effects from the cold.

When the weather is mild, they may be turned into the yard for some time for exercise and for the benefit of the sunshine. If the weather is very fine they may be turned into the fields and they will enjoy the liberty.

But in case the cold winds are blowing, they should be kept in the shelter of the stables, for I have found that unless so protected, they shrink very much in their milk and when once the milk flow is stopped, or checked, it is exceedingly costly to bring them back to their full flow again.

I always clean out the gutter and put in a good bed of clean straw before milking, or better still, when feeding shredded corn fodder, I take the refuse out of the mangers before feeding again and put it back under them. The cornstalk thus is a great absorbent of liquid. In fact I think it superior to straw. I have used it for the last few years now with great satisfaction.

The manure from the cornstalks is wheeled into a shed adjoining the barn, where the house manure is also placed. The hogs that are kept during the winter time have access to this shed, and they mix the manure thoroughly from both the stables. This method prevents an undue heating of

Home of the Golden Rod herd, G. Van Patten & Son, Sutton, Neb. A great sale of Duroc bred sows will be made on this farm on February 19th. Send for catalog.

DE LAVAL
CREAM SEPARATORS

Merit Confidence

CONFIDENCE is one of the most important and satisfactory consideration in every act and interest in life.

There is nothing the dairy farmer buys that is of as great importance to him as the cream separator, which SAVES or LOSES money in quantity and quality of product every time he puts milk through it, TWICE A DAY 365 DAYS IN THE YEAR, and lasts from six months to twenty years according to the durability of the machine.

Hence the importance of only making so serious an investment with COMPLETE CONFIDENCE that you are buying THE BEST and that which will LAST LONGEST.

Every man who knows what a cream separator is knows that this is true of the DE LAVAL, the original and for thirty years the "WORLD'S STANDARD" cream separator. Somebody may CLAIM as much for some other separator, but no buyer can possibly have equal CONFIDENCE in its being so.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

the horse manure, and makes a better preparation for the field for fertility.

The hogs are fed grain, together with skim milk and buttermilk from my dairy. They are well, but carefully fed, and are ready for market before seeding time the following spring.

Many farmers are beginning more fully to realize the value of the corn plant as cattle feed, both in the form of shredded corn fodder and silage.

We can no longer afford to let it waste in the fields, as we have heretofore.

My experience is that it is far superior to many kinds of hay and much more economical. Nothing will beat silage for the dairy, and shredded corn is I believe much better than timothy hay, which I see many farmers feeding their dairy cows.

Subscriber.

THE PLACE TO BEGIN DAIRYING.

To the Editor of The Homestead:

Just now a good many farmers are turning their eyes toward dairying. No doubt the high prices which have prevailed for the past few years have had something to do with this determination on the part of a good many who have not heretofore paid much attention to that part of farming. Some, too, are beginning to see that if they would keep their farms in a good state of cultivation, they must in some manner get more natural fertility and have come to appreciate the fact that there is no better way of doing this than by keeping cows.

But two or three things stand in the way of these dairy plans. One is the high cost of cows. A man must have quite a lot of money to step out and buy cows that will be such as we want. Very few dairy cows are on the market at the present time. Their owners are well satisfied with their profits from milk, butter and cheese and do not care to sell.

Again, there is no surplus of cows at best. For some years the scarcity has been more and more apparent. Beef has taken most of the poor cows out of the country—poor, I mean in the way of milk production. I feel sure that there never was a better lot of cows in this country today than there are just now. Start out to buy cows and see if it be not true that there is a real scarcity.

How, then, and where shall the man begin who wants to establish himself in the dairy business? Can we afford to get in debt for cows? Would we be sure of paying out if we did? The price of milk and milk products may decrease and leave us in the lurch. This latter supposition is not very likely to be realized. We never will see milk and butter back where it was a few years ago. But I am not of those who advise going heavily into debt to carry on any farm operation. My way would be this: I would buy a few choice cows and place at their head a good bull—the very best I could. Then I would steadily work into the larger herd I desired. This would give me experience as I went along, if I never had any before in dairying. I would have the advantage of knowing every one of my little herd personally, which I consider a marked advantage. I would expect to take a great deal of pleasure as I went on, and before many years passed I would have as large a dairy as I wished without having expended a very large sum of money.

E. L. Vincent.

IOWA SHORT-HORN MEN MEET.

The Iowa Short-horn Breeders' Association which has recently been reorganized held its first annual meeting in the agricultural building of the state college at Ames on the afternoon of January 6th. A severe storm the previous day prevented many from attending, however, a good-sized crowd of enthusiastic supporters of the breed were in attendance and the association promises to become one of the strongest of its kind in the state.

A short, but extremely interesting program was rendered. Mr. George Burge, of Mt. Vernon, giving a talk on "The Past and Present Association and Its Future Possibilities," and Dean Curtiss spoke on the subject of "Short-horns and Iowa Agriculture."

At the business meeting it was voted that a committee be appointed to extend to the veteran Iowa breeders, Mr. L. S. Coffin and Mr. C. S. Barclay, an appreciation of their work as early breeders and as founders and promoters of the asociation.

It was also voted to accept the offer of $100 made by the state fair board for the building on the state fair grounds owned by this association, and a committee was appointed to select suitable premiums to the value of $100 to be offered at the coming state fair for cattle shown by members of this association.

A general discussion followed concerning the affairs of the breed within the state and a summer meeting was suggested and in all probability will be held some time in June, probably at some breeder's farm where the needs of the association can be more fully discussed.

Iowa has more Short-horn breeders than any other state in the Union, many of whom are young men, beginners starting in a small way, but in the end bound to become breeders of more or less prominence. It is to this class of breeders in particular that the association offers its greatest usefullness in the way of offering special premiums at the state fair, doing association advertising, holding bull sales or whatever the members may deem most valuable to all concerned.

New members are daily being added to the list and the membership enrollment promises to be larger than it has ever been.

Officers for the coming year were elected as follows: President, Wm. Herklemen, Elwood; vice-president, J. A. Benson, Sheldon, and secretary and treasurer, E. R. Thomas, Audubon. Howard Vaughn, of Marion, and Geo. Burge, of Mt. Vernon, were chosen as directors to serve two years and Ralph Watts, of Miles, and C. F. Curtiss, of Ames, were chosen as directors to serve one year.

EXIT THE RURAL PASTOR.

In the last few years 21 per cent of the country churches of the United States have fallen into disuse, according to figures given to 1,000 farmers in a lecture here today by the Rev. C. F. Adams, who recently has made an exhaustive investigation of the country church. Mr. Adams was one of the speakers at the annual farmers' week at the Missouri State College of Agriculture. He characterized the present country church conditions as appalling.

"Sixty-nine per cent of the country persons never attend church or have no church connection at all," he said. "The rural community has had to supply the pulpits of the cities and as a result the country church has gone down. Eighty-five per cent of our city ministers come from the country.

"The country church at present is used as an experimental station. The young ministers just try themselves out on the country people for a short time and then leave. In many cases the pulpit is filled but once a month and then the congregation does not see its minister again until he preaches another sermon."

Mr. Adams says the building of parsonages in the country and the spending of their leisure time in farming by the ministers is the only thing that will solve the problem. This will give the preacher an interest in the community and opportunity for making a living.

LOOK OUT FOR ASPARAGUS RUST.

Rust is one of the deadly foes of asparagus and when a bed has been infected with this disease one had just as well plow it up. By carefully caring for the bed one may be able to prevent the rust from striking it.

One of the worst things to infect the bed is the wild asparagus growing along the fences. Their influence can be easily traced later in the season. So it is a wise plan to dig up all these wild roots and burn them. The dead stalks from the wild asparagus should also be burned.

Watch the shoots in the bed and cut away all poorly formed ones, and above all do not let the asparagus that has grown rank fall about the bed and decay. They should be removed while green, and as soon as dry burned up. By keeping the bed clean there will be no great danger from the asparagus rust.

JERSEY CATTLE.

WINELAND FARM JERSEYS The Wineland Farm herd of Jerseys contains some of the most noted animals of the breed and has the greatest number of Register of Merit cows of any herd in the West. Some choice young stock for sale. Address, mentioning The Homestead, H. C. Young, Lincoln, Neb.

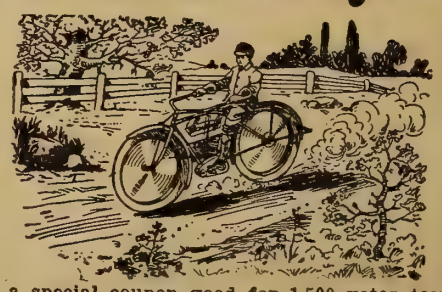
$250 Motorcycle Given Away



YOU SEE in this picture a boy riding one of the $250 Excelsior Motorcycles we are giving away. In other parts of the picture are the faces of several other boys. They are hard to find, but by turning the picture about you will be able to see them. Mark at least two of the faces with a cross (X) and send the picture to me. Be sure to send me your name and address, for I will tell you all about the contest in which you can win the seven-horsepower motorcycle and many other prizes.
1500 Votes Free I will send you a special coupon good for 1,500 votes toward the motorcycle. All you have to do to get this coupon is to send your name and address at once.
PEOPLE'S CO., - 515 Popular Building - Des Moines, Iowa

VETERINARY MATTERS.

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

CROOKED LEGS.

I have a last spring mare colt that has straight hoofs. She was all right when she was born, but this condition became noticeable when she was six weeks old. Her limbs are perfect and only her front hoofs are affected. She does not limp, but seems to walk on her toes.

In such cases persistent hand rubbing of the back tendons of the legs, several times a day, and forcing the feet to assume their proper position on the ground, sometimes gradually effects a cure. Each night during this treatment the legs should be bandaged from feet to knees. If these simple measures do not avail, then the only recourse will be to have the tendons cut by a graduate veterinarian. We refer to the operation of tenotomy, which can only be done safely and successfully by a qualified surgeon.

FISTULA.

I have an eight-year-old bay colt. When he was two months old a large lump raised up on his neck just back of his jaw. It got larger and larger and did not break, so I lanced it and it ran a little thick blood and went away. In about two weeks it raised again and broke. I thought it would be all right, but it raised again and broke and has been running ever since. Have used some liniment. Can this be cured?

We suspect that you may have caused a fistula of the salivary duct, by cutting into the enlargement, but without an examination we cannot decide just what is the matter. Try effects of painting with tincture of iodine each day, after clipping off the hair and also inject a little of the tincture twice a week.

INDIGESTION.

I have a brown mare, four years old, weight 1,130 pounds, that I think has weak kidneys. When not working her urine is a light yellow, but when she is worked or driven she passes bloody water and just a few drops at a time about every ten minutes. Her bowels also become loose when I drive her. Before starting she seems to be in natural condition, but after a short drive her bowels become loose and stay in this condition for about a day. The passage is just like water and the mare gets very weak. Have given no treatment.

Never let this mare stand for a single day idle in the stable. When there is no work for her to do turn her out in the yard and cut the ration in half. Give her a roomy box stall in the stable. Let her have free access to rock salt. Give the drinking water before feeding. Feed whole oats, wheat bran and best of hay, allowing not more than one pound of each, per hundred pounds of body weight, as a day's rations when ordinary work has to be done, but increase the grain ration when work becomes hard. It may be that there is a stone or gravel in her bladder and either can be removed by operation; but an expert will be required. She will not be likely to scour if you feed and manage the mare as suggested here. If she eats her bedding, bed with planing mill shavings or sawdust.

LAMENESS.

Would like some advice in regard to my sorrel horse, four years old and weighing 1,000 pounds. About two months ago, when I was in town, he got scared and broke loose, but did not go far until I caught him. I rode him home and did not notice anything wrong for a few days. Then he did not like to step over the barn door sill. I hitched him up and drove him and he seemed all right except that he sweat around the stifle joint. I turned him out for a few days and then drove him again and he got worse. I bathed the stifle with liniment and I noticed he would flinch from any pressure on the leg, but did not have any fever. Now there seems to be fever in the fetlock joint and he lifts his foot as high as he can get it if I touch it.

Confine the horse to a large box stall and poultice the affected joint with antiphlogistine, applied hot and covered with antiseptic cotton and bandage. Renew the poultice when the clay tends to become dry. Should lameness persist after the inflammation has subsided clip off the hair and blister with cerate of cantharides.

Los Angeles Herald: Five hundred beautiful queens, absolute rulers of a buzzing nation of 10,000,000,000 bee inhabitants on the sunny plains of old Italy, will soon be imprisoned, put aboard a transatlantic ship and sent to California, where, with their sturdy constitutions, they will help to breed a new race of bees and prevent the advance of "black brood," the plague of beedom.

IN THE FIELD MAKING MONEY—

or in the Barn Wasting It

Whether your horses work or not, their feed costs you big money. When a horse is laid up you not only lose the cost of *feed*, but also the profit that the horse would have paid if *able* to work in the field.

Since there is no way to *prevent* spavin, curb, splint, ringbone, sprains and lameness, your thought should be given to the quickest, surest and most economical *cure*. And for over 35 years, thousands of horsemen have depended on Kendall's Spavin Cure. It's the old, reliable, *safe* remedy that has saved thousands of dollars' worth of *horse flesh*, to say nothing of the *worry*, *time* and *trouble* it has saved horse owners. *You* should get and keep a bottle of—

Kendall's Spavin Cure

for emergencies. You never can tell when you'll need it, and when the time does come, you'll be mighty glad you had the foresight to prepare. Here are samples of the thousands of letters we receive from grateful horse owners every year. Mr. J. J. Sandlin, New Hope, Ala., writes:—"I am a great believer in Kendall's Spavin Cure. A few applications have just taken an unnatural growth off my horse's back, thereby increasing his value $25.00 at least." Mr. J. B. McCullors, Haleysville, Ala., writes:—"Last July I bought a mule for $65.00. He had a bad Spavin and was unable to work but after using three bottles of your Spavin Cure, I cured it and he was sold in March for $180.00. I advise all horse owners to use Kendall's Spavin Cure." And Mr. Wm. Booth, of Grovette, Ark., writes:—"I have cured both Blood and Bone Spavins, taking the bunch all off and leaving the horse as sound as he ever was. The horse does not need entire rest while using Kendall's Spavin Cure. Light work and careful handling are better than standing in the barn. If the horse was in the pasture not many people would take proper care of him. I use the Spavin Cure a week at least, sometimes three, according to the severity of the trouble. There is enough in one bottle to cure three large Spavins if used according to directions. It is excellent for bruises, both for man and beast. Your Spavin Cure will cure Thoropin in a hurry. With over twenty years' experience with this remedy I know what I say to be true. If one doubts my my word he may bring me a horse with a Blood Spavin on one leg, Bone Spavin on the other and Thoropin on both and I can make him a sound horse in six months. What I have done I can do again and what I have done others can do."

Why experiment with other remedies—when you know what Kendall's has done and can do. You can get Kendall's Spavin Cure at any druggist's, $1.00 per bottle, 6 for $5.00. Ask for free book. "Treatise on the Horse," or write direct to

Dr. B. J. Kendall Company, Enosburg Falls, Vt., U. S. A.

SAVE-THE-HORSE
(Trade Mark Registered.)

THE LAME HORSE is never cured whose owner reads and doubts,—BUT FAILS TO ACT—Here is a case in Point,—And what Happened to this Subscriber is Taking Place with Thousands.

Letter No. 1 Orleans, Vermont, April 26th, 1912.

Troy Chemical Co., Binghamton, N. Y.—Your adv. has given me courage to try again. I have a valuable pacer. Two years ago he went lame. I tried every remedy and Doctors have blistered three times for spavin and twice hip. The symptoms are—etc., etc. I determined to see what you think. HALE MASON.

Letter No. 2

Orleans, Vt., May 2nd, 1912.—I received your letter and book yesterday and believe you are right about its being a bone spavin. I was so encouraged I drove eight miles and bought a bottle of Fred D. Pierce, druggist at Barton, and will closely follow your special instructions. Thanking you for your quick reply to my first letter, I remain, HALE MASON.

Letter No. 3

Orleans, Vt., Oct. 9, 1912.—Perhaps you expected to hear from me before, but I have been waiting to see if any trouble would return after stopping the treatment. I am pleased to say the horse is well. I cannot thank you enough for your interest and the advice you gave. If I had known about it two years ago it would have saved me a lot of money. Yours respectfully, HALE MASON.

Save-The-Horse has stood alone and unique among veterinary remedies for over seventeen years.

Every bottle of Save-the-Horse is sold with an iron-clad contract that has $60,000 paid-up capital back of it, guaranteeing to permanently cure or refund the money; no matter whether it is Bone or Bog Spavin, Tendon disease or Puffs—nor how aged, serious or complicated the lameness or blemish may be.

But write, describing your case, and we will send our—BOOK—sample contract, letters from Breeders and business men the world over, on every kind of case, and advice—all free (to horse owners and managers).

Write! AND STOP THE LOSS.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be enclosed with inquiries. Address all letters relating to poultry topics to this office.

THE USE OF SPROUTED GRAINS.

To the Editor of The Homestead:

Foods and feeding are vital factors in the successful care of poultry. And there is not a careful poultryman today, whether on the farm or the commercial poultry plant, who does not recognize the imperative need for green food the year around. This need may be met in many ways, especially by stored vegetables, such as cabbage, mangels, clover and alfalfa hay, for use during the winter months, when nature is in her annual sleep. The idea of sprouting grains came to some bright mind a number of years ago, but it has only slowly taken practical form, and now promises to come into general use. The very fact that it is assuming commercial importance sufficient to develop regular plants for its production, and also the appearance upon the advertising pages of our poultry and agricultural journals of devices for minimizing the task of preparing this desirable food at home, shows the trend of the times. Sprouted grains have come to stay, and to assume a prominent place in the food rations.

"Green things growing!" We all know with what delight the feathered flocks, from the wee babies to the mature fowls, hail the tender green of the early spring. They are fairly ravenous for every blade coming through the brown old earth. And so if we can supply them with this luxury, which seems to meet such a vital need of their natures, we have taken a long step toward turning winter into spring, and bridging the difficult gap between the season of greenness and growth.

Such grains as oats, wheat and barley have been found to be the best adapted to the sprouting process. These grains increase considerably in bulk when soaked and if kept very moist for a day, and then spread out in a warm place and kept damp, will soon throw out shoots, which in a short time will become a perfect mat of green. The softened grains are still there, and the green growth still further increases the bulk of available food. Expert authorities tell us that in the process of sprouting certain chemical changes take place. Heat, water and atmospheric air are necessary to the germination of the grain. The water softens the grain, the carbon unites with the oxygen of the air, and carbon dioxide is liberated. The starch, according to this authority, changes to a compound closely resembling sugar, and the embryo plant begins growth, living on the material of which the grain is composed until the rootlet can strike into the soil and seek plant food there. Thus we see that sprouting grain does not increase the quantity of nutritive material which it originally contained, but it so changes it that it becomes more palatable and there is some reason for believing, more nutritious. Experiment seems to favor the idea that the process of germination in some manner predigests some of the elements of nutrition contained in the grain so that a larger percentage of it is assimilated, thus making it more valuable.

But how may the farmer or ordinary poultry keeper prepare these sprouted grains? This is a practical question, and one which has been solved in different ways. If a furnace cellar is available, with some sunlight, it is an ideal place for this work. After soaking, the swelled grain is placed in large, shallow boxes, something like the "flats" used for germinating seed. These may be placed in tiers for the first few days, since light is not indispensable for the period of germination. Occasional stirring is necessary, that the grain may be neither rot nor mold. After a thick mat of green has developed it may be cut into squares and fed to the fowls. If a cellar is not available, the process may be carried on upon a small scale about a big, accommodating kitchen stove, provided the mistress of the

Johnson's New Book

BERRY'S POULTRY FARM, Box 49, Clarinda, Iowa

Get This Big Help!

Don't do *all* the work yourself. Harness your farm to a team of French Dry Batteries.

For a *few cents* you can save hours of time, miles of steps and a pile of dollars. The convenience and luxury of electricity is at your hand ready for instant use *all the time*, summer or winter, rain or shine.

Just the pressure of a button or a twist of the wrist and presto! the gasoline and automobile engine is started; both party and exchange lines of the telephone are working; gates and doors are opened; call bells are rung, and scores of other duties are performed by the aid of

The marvelous French Dry Battery delivers a strong current of electricity for a *long* period. They are scientifically constructed packages of electricity. Poor quality batteries give a weak current for a *short* time.

Don't Take Imitations

French Dry Batteries are imitated the country over. Most batteries *look* alike, but in service and satisfaction there's a vast difference. So be careful. Insist on *genuine* French Dry Batteries. If you want to learn of *all* the ways French Dry Batteries can help you do your farm work, send your name and address at once. It brings *all* the facts.

kitchen is sufficiently interested in the chickens not to object.

The experiments of a clever farmer who utilized his silo for green feed for his poultry is quite interesting and suggestive. We quote from the Successful Poultry Journal:

Last year we built a silo and after our corn was run in we put a few loads of alfalfa on top to exclude the air, then put about four inches of oat straw on top of that, and a bushel of oats, wetting it down thoroughly.

In two weeks we had a rank growth of oats, the heat from the silage causing it to grow very fast; this we fed to our runner ducks. Later we took some of the silage out and found it turned brown and slightly acid, but gave some mixed with oil meal and middlings to our ducks and they ate it greedily. Then we gave some to our laying hens and they were simply crazy for it. After the alfalfa silage was used up we fed corn silage to good purpose. It was always mixed with warm water or warm milk from the separator. We mixed the corn silage the same way, and both hens and ducks would leave any other food for it.

Of course, silage is not sprouted grain, but in this case the bushels of oats was successfully sprouted on top the other contents, and the discovery that the silage served much the same purpose as the sprouted grain, may be suggestive to some of your readers.

So far we have considered the sprouted grains as a winter feed. It is equally adapted for summer use when needed. For little chicks or yarded fowls, or late in the summer when the vegetation is no longer succulent and tender, it is of immense value. I remember reading of a man some years ago who kept such feed before his yarded birds by the simple device of placing over it a wire netting cover, so that the fowls could only eat what grew up between the meshes, thus keeping it growing for some length of time. A growth of alfalfa could thus be kept available for a long time.

Digressing a little, we may say the wheat, oats, barley or kafir corn, even when soaked only a few hours, are preferred by the fowls to dry grains of the same kinds. This is especially good for hot weather. When the "Better Farming" special train was making its tour through North Dakota, the poultry exhibit claimed a large share of the attention and interest.

This poultry exhibit occupied a flat car, with its poultry house, coops, brooders, incubators and other equipment. A few birds were kept in the house, with a small covered yard for their convenience. The feature that seemed to attract the most interest was the way in which green food was supplied to the birds during the journey by means of sprouted oats in a box of dirt and covered over with wire poultry netting. It was a practical idea which the North Dakota farmers were quick to appreciate.

The many bright, resourceful men and women on our farms will not be slow to adapt this idea to their own conditions and surroundings. When it comes into general use old Mother Nature will have to own up that we have really gotten ahead of her for once. Mrs. S. B. Titterington.

If fowls are afflicted with any liver disease, change the food immediately. Indigestion is always followed by liver trouble if it is not remedied which finally results in serious bowel trouble that produces death in most instances.

Sprouted oats make an excellent ration for the laying poultry.

The "best" strain of poultry usually is the one that receives the best care.

POINTERS.

—Buff Orpington cockerels are advertised for sale by R. W. Halford, Manning, Iowa, on page 28.

—Buff Wyandotte cockerels of the large strain are advertised for sale by J. M. Sheehan, Stuart, Iowa, on page 28.

—Mrs. C. F. Sealock, Route 5, Neola, Iowa, offers choice Barred Plymouth Rock cockerels for sale at prices named in her advertisement appearing on page 28.

—Heavy-boned Black Langshan cockerels are advertised for sale, singly or in lots of six, by J. H. Rayl, Afton, Ia., in his advertisement that appears on page 29.

—Tom Sellers, Vinton, Iowa, will guarantee the quality of his Rose Comb Brown Leghorn cockerels that he is offering for sale in his advertisement on page 29.

—H. A. Hamilton, Yutan, Neb., has some choice Crystal White Single Comb Orpington cockerels that he is offering for sale in his advertisement that appears on page 28.

—William Meyer, Blue Earth, Minn., has seventy-five Barred Plymouth Rock cockerels and fifty Mammoth Pekin ducks which he is offering for sale in his advertisement on page 29.

—Quality considered, Chas. McCaskey, Ogden, Iowa, guarantees the price of the Barred Plymouth Rock cockerels, quotation of which is found in his advertisement appearing on page 28.

—Big-boned, farm-raised Black Langshans, unscored, are offered for sale by Alex Peterson, Pomeroy, Iowa, in his advertisement that appears on page 29. Mr. Peterson guarantees satisfaction.

—If desiring to purchase choice cockerels, either Single Comb Buff or White Orpingtons, the advertisement of Mrs. Roy McMullen, Hume, Ill., that appears elsewhere on page 28 will be of interest.

—Anyone wanting Buff turkeys would do well to write Mrs. L. C. Dennison, Monmouth, Ill., as she advises us that she has some fine birds for sale. They are large and pure buff and were awarded first premium at the Warren

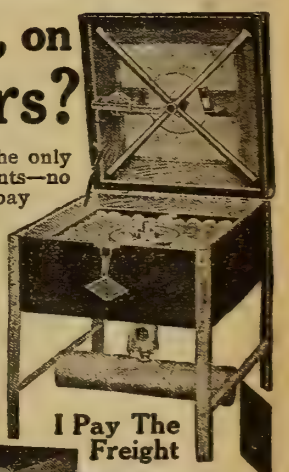
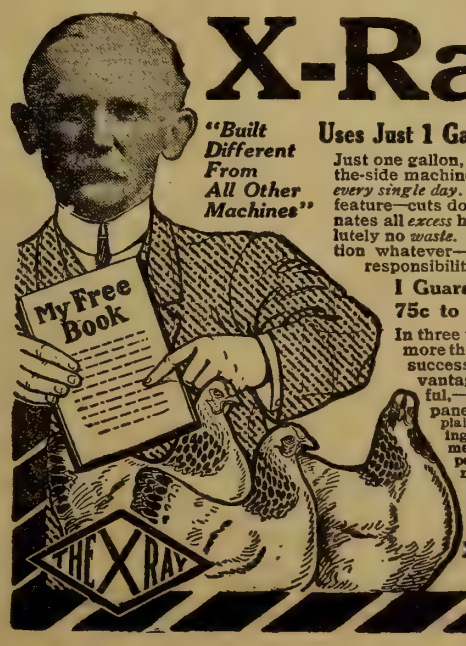
Will You Send For My New Free Book No. 41, on X-Ray Incubators and Brooders?

LET me tell you why the X-Ray is the best machine for *you!* My X-Ray Incubator is the only *improved* one on the market. It is shipped *direct* from my factory to you. No agents—no dealers. Guaranteed to please—your order filled the same day received. And I prepay the freight. Free book tells all. I put a big lamp *underneath*—square in the center—and *not* on the side! This makes an absolutely even temperature in egg-chamber *all the time*. No cold side or corners. Fill this tank *just* once, then forget about it till *next* hatch. Other machines have to be filled *every day!* The famous



X-Ray Incubator



"Built Different From All Other Machines"

Uses Just 1 Gal. Oil to Hatch—Requires Only 1 Filling of Lamp!

Just one gallon, that's *all!* The old-fashioned lamp-on-the-side machines use 3 to 5 gallons and have to be filled *every single day*. My automatic trip—an exclusive X-Ray feature—cuts down the flame *at the burner*. This eliminates all *excess* heat, smoke and smell. And there's absolutely no *waste*. My X-Ray regulator requires no attention whatever—it is purely automatic and takes all responsibility from *your* shoulders.

I Guarantee to Save You From 75c to $1.25 on Every Hatch

In three year's hatching I can save you more than what you paid me for my ever-successful X-Ray machine. The advantages of this machine are wonderful,—X-Ray has two double-glass panels on lid so thermometer can be plainly seen at any time—without chilling or disturbing eggs. To use my X-Ray means less handling of eggs, less oil expense, less heat generated, no waste, no fumes, no dirty, mussy lamp to be filled every day. Women, especially, prefer the X-Ray—it is nice and clean, so sanitary. Yours truly,

J. H. KATE, President,
X-RAY INCUBATOR CO.
Wayne, Nebraska

The X-Ray Brooder is Guaranteed to Raise Every Chick Worth Raising

Built with same perfect heating system as my famous X-Ray Incubator. Affords the best kind of a home for little chicks. Gives them plenty of light, air and ventilation. Four windows, all slide to ventilate. A better home than the old hen herself. Write me *today* for Factory-direct price on X-Ray Incubator or Brooder. Address me personally, J. H. Kate, Prest.

county (Illinois) poultry show last week. See advertisement on page 29.

—Read the advertisement of Mrs. T. M. Neal, Bristol, Iowa, offering turkey toms for sale, that appears on page 29 of this issue.

—If wanting strong, vigorous Rose Comb Rhode Island Red cockerels or Ancona cockerels, hens or pullets, the advertisement of J. E. Kafer, Rolfe, Iowa, appearing on page 29 of The Homestead, will be of interest.

—Mrs. H. A. Wohlsdorf, Lawler, Ia., is offering White Holland turkey hens and toms and Single Comb Black Minorca hens, pullets and cockerels, not related, at very moderate prices in her advertisement that appears on page 29 of The Homestead.

—R. R. Stewart, Charles City, Iowa, has been a breeder of Rose Comb Brown Leghorns exclusively for the past fifteen years. He is quoting prices on cockerels, pullets and hens, and also eggs, in his advertisement that appears on page 29 of The Homestead.

—"We have a choice lot of Mammoth Bronze turkey toms and pullets," write Ring Bros., Newton, Iowa, in furnishing copy for their advertisement on page 29. "Our Barred Plymouth Rock cockerels are all of good size, bone, frame and plumage. We ship nothing but choice birds. Write for description."

—"The Single Comb Buff Orpington cockerels we are offering for sale," writes the Evergreen Poultry Yards, Waterloo, Iowa, in sending in copy for advertisement on this page, "are from our extra heavy-laying strain and are an even shade of golden buff from head to tail. They are extra large, weighing eight and nine pounds each, with heavy bone. They will be priced reasonably."

—Mrs. W. E. Zimmerman, Neola, Ia., who has been advertising Single Comb Buff Orpington cockerels for sale, writes under date of January 17th as follows: "Discontinue my advertisement in The Homestead for a little while, as I am all sold out of cockerels. I want to use my space in the near future for advertising my eggs. It pays to advertise in The Homestead, for it does the business."

—We desire to call the attention of our readers to the advertisement of S. Harr, Riverside, Iowa, that appears on this page of The Homestead. Mr. Harr is a breeder of White Wyandottes and at this time is quoting prices on some good cockerels, also on pullets and hens. He can mate pairs, trios and pens. His White Wyandottes are bred for beauty and laying qualities combined. In writing him state just what is wanted.

—The advertisement of Henry G. Walker, Iowa City, Iowa, breeder of Rose Comb Rhode Island Reds exclusively, appears on page 29 of The Homestead. Mr. Walker proposes to ship stock and eggs on approval and a score card will be furnished with each bird sold. He also will give customers the privilege of examining stock before accepting same. As to his reliability our readers are invited to inquire of any bank or business firm in Iowa City.

—The Elmwood Poultry Farm, Blairsburg, Iowa, in sending copy for advertisement found on page 29 of The Homestead, write: "For a number of years we have found The Homestead a splendid medium for disposing of our stock and we now come with a fine lot of good, thrifty, farm-raised Rose and Single Comb Black Minorcas and Langshans for sale. Our birds have been first and second-prize winners at several shows this winter. Our Single Comb Minorcas were silver cup winners at Ottumwa. Our prices are reasonable."

—M. V. Leeper, Redfield, Iowa, has an advertisement of Barred Plymouth Rocks and Bronze turkeys on page 29 of The Homestead. In furnishing copy Mr. Leeper writes: "I took my scales and went into my cockerel house this morning and picked and weighed cockerels until I was satisfied that I had nothing weighing less than seven and one-half pounds, and lots of them weighed up to ten pounds. I will guarantee the weight of every bird I ship. I only have a few toms, but they are extra large fellows, easily worth the money I am asking."

—Silver Laced Wyandottes are offered for sale by the Trio Poultry Farm, Des Moines, Iowa. Mr. McDonald, proprietor of the Trio Poultry Farm, is a genuine poultry fancier and looks after and attends to the care and mating of these birds personally. Readers of this paper can rest assured that their wants will be personally looked after and satisfaction is guaranteed. Be sure and direct all letters to the Trio Poultry Farm, as there are other McDonalds, but if directed to the Trio Poultry Farm it will be sure to reach them and will be promptly attended to.

—Edward Meyer, Dyersville, Iowa, whose advertisements, one of Pekin ducks and the other of White Partridge Wyandottes, appear under their respective headings in this department, writes: "I took first prize at Vinton, Iowa, on Pekin young drake and first on duck. I also took first on Partridge Wyandotte cockerel, first and second on hen and third on pullet. I have a very fine flock of Partrige Wyandottes, cockerels scoring up to 93 and pullets scoring up to 93 for sale at reasonable prices. These Wyandottes are of a good laying strain. My pullets are nearly all laying now and laid early last fall. They are nearly all up to the standard weight and over, have the right shape and are marked well. My flock of Pekins is also very

fine. The young drake, the prize winner, weighed ten pounds."

—White Holland turkeys of both sexes of the Elephant strain will be sold at right prices to Homestead readers by Mrs. J. H. Hanlon, Lawler, Ia., as per her advertisement that appears on this page.

—In an advertisement on this page R. V. Keeney, Fair Ground Station, Des Moines, Iowa, announces that he wants to buy thoroughbred poultry, turkeys, ducks and geese. Those who have surplus fowls will do well to write him.

—Mrs. E. S. Kelley, Farmington, Iowa, advertises big Embden geese on this page of this paper. Geese are the healthiest domestic fowls, as well as the most profitable. For prices and descriptions write to the address named.

—Pure-bred White Wyandotte cockerels, scored and utility stock, also White Holland turkeys, are advertised for sale by A. J. Menefee, Adair, Iowa, in his advertisement that appears on page 28 of The Homestead. Mr. Menefee will also be able to supply Homestead readers with eggs in season.

—Mrs. N. W. Burbank, New Sharon, Iowa, in furnishing copy for her advertisement on page 28, writes: "I still have a few fine Bourbon Red turkeys and all of my customers have been well pleased with those that I have sent them. My White Wyandottes are noted for their fine color, size and good laying qualities."

—The advertisement of Mrs. W. S. Kern, Plainfield, Iowa, offering extra fine Barred Plymouth Rock cockerels for sale, appears on page 28. She writes that the most of these have good combs, yellow beaks and legs with good barring. Her cockerels weigh from 6 to 9 pounds, and they will be sold at prices that will suit her customers.

—Mrs. Wilson McIntyre, Red Oak, Iowa, writes: "I have the finest flock of Single Comb White Leghorns I have ever raised. They are from D. W. Young's strain. Scored cockerels at from $1.50 to $5. They are related to my Omaha and Villisca prize winners. I am booking orders now for eggs and baby chicks." See her advertisement on this page.

—Mrs. Jas. Pedley, Britt, Iowa, whose card appears on page 28 advertising White Plymouth Rock cockerels, has successfully raised this breed for over fifteen years, which experience has resulted in the production of some especially fine poultry. She now has a few choice cockerels left for sale, and since they are not scored will sell them at very reasonable prices. Mrs. Pedley's birds from the same strain have scored 94, having won many blue ribbons. These cockerels weigh seven and eight pounds and cocks nine to eleven pounds. It is a good chance to buy first-class stock cheap.

THE HOME

LETTERS intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Postoffice Box 639, Aurora, Missouri.

WITH THE EDITOR.

From time to time for several years past our circle has had the pleasure of talks from Miss Sarah Wood, of Anamosa, Iowa. From these talks I judged that our friend led a full life along lines that some of us are not as well acquainted with as we might be. Also a little bird whispered that it would be interesting for us to hear about The Pines, Miss Wood's home. And to add interest to these we induced our friend to give us her picture which we have pleasure in presenting.

Miss Wood's father and mother were among the easterners who settled in Iowa in the early days, and bringing with them the memories of a beautiful home they lost no time in beginning to make a beautiful spot of the unimproved farm land on which they settled. When Miss Wood tells us about The Pines we shall learn

MISS SARAH WOOD.

how well they succeeded, and how well their sons and daughters have carried on what they began. The only girl, it fell to Miss Wood's lot to make sunshine for her father as he slipped down the hillside into the Valley of the Shadow and to nurse her mother through years of invalidism. What plans and hopes she sacrificed on the altar of parental affection we may not know, but life has been good to her, she says, and as comrade and housekeeper to her two brothers time has given her many good things. One of them is the pleasure of travel and the collecting of souvenirs, shells, minerals, and Indian relics. Household duties, poultry and garden keep Miss Wood busy, but do not occupy all her time, for in answer to a question I asked she replied:

While I have led a busy life I have always made time to read and study. I am just finishing a three years' course of home study as outlined by the University of Chicago Correspondence School. Last winter we read Hume, Locke, Spencer, Huxley and Darwin, and I greatly enjoyed them all. I am fond of nature study and note down in my dairy the date of the first appearance in the spring of all the birds I can recognize and the date of their departure in the fall. I have a passion for trees and never go on an outing without bringing home new leaves to add to my "Nature book." I have never found country life humdrum; I have never allowed it to become so.

How could life be humdrum when added to the joy of useful work one has the joys of books, nature study, of travel and of the collector—not to mention the joys of comradeship with brothers and of a home such as Miss Wood will now tell us something of.

The editor invites me to step out from "the shadow of the pines" and tell "Among Ourselves" something about my home environment. Our house, a commodious fourteen-room one, is located quite a distance back from the public highway; a three-acre park, planted with a variety of trees, and set to blue grass is in front; an avenue fifty feet wide, with giant white pines on each side, leads from the road up to within twelve feet of the house and then stops at a terrace where stone steps and cement walks extend to the veranda. Wide cement walks lead around the house and out toward the barns. West of the house the terrace is on your left and cherry and pear orchards on your right. On the north a yard shaded with trees is met by an apple orchard of six acres, and the straight rows and symmetrical trees make a pleasant vista. When the dew like unstrung pearls is sparkling on the white clover and the apple blossoms are filling the air with their perfume, then the "lure of the orchard is strong," but deep down under the pines, where the fitful shadows come and go, is my favorite retreat. Here I played with the cones when a child. Here Spring first whispers that she is coming and the trees put on their first faint green. Down here the sun shines warm, wooing and coaxing out many a bud, here the willows put forth their catkins and mosses and lichens brighten up. The scent of the woods, when the sun warms the brown leaves, the fragrance of pine, hemlock and cedar and wild wood violets fill the air. Here the first note of robin and blue bird is heard and the scream of the jay rings out.

Here I my favorite authors read,
And think what a pleasant life to lead.
Each well-read volume has a glory
That seems a part of the Divine;
Each tells a truly perfect story,
Read 'neath the shadow of the pines.

Later on, when September skies are blue, the road a blaze of golden-rod and purple asters, too, and maples are hanging out their banners of red and gold,

And the sound of dropping fruit is heard
In the apple trees nearby,
The evening shadows damp and cool,
The hoot owl's mournful cry,

Then I know the time is short for lingering and dreaming in my favorite nooks. But when the frost king arrives and hangs his garniture of frost and ice on all the trees and the ground is white with snow, I walk down the avenue and think, "God must have let his imagination run riot in painting this beautiful fairyland." The rabbits crouch at my feet and the squirrels scamper from tree to tree and will venture up to eat bread from my hand.

He has no thought of any wrong,
He scans me with a fearless eye;
Stanch friends are we, our bonds are strong,
My squirrel chum and I.

I like to scatter wheat on a broad pine stump for the winter birds, also down under a broken limb and along the hedge row where the quail are snugly quartered for the winter. We are all good comrades at "The Pines."

Do the friends glimpse an ideal country life? I do, and I am happy that we are privileged to hear from this circle member whose coming should stir us to see more of the rich possibilities of farm life.

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY—DO THY WORK.

Do thou thy work; it shall succeed
In thine or in another's day,
And if denied the victor's meed,
Thou shalt not miss the toiler's pay.
—Whittier.

Let me but find it in my heart to say,
When vagrant wishes beckon me astray,
"This is my work, my blessing, not my doom;
Of all who live, I am the one by whom
This work can best be done in the right way."
—Van Dyke.

To make a baby's inexpensive crib, take a box about twenty-eight inches long, eighteen inches wide and twelve inches deep. This box will hold a good-sized pillow for a mattress. For the legs buy four ten-inch iron harness hooks from any hardware or harness dealer and fasten one to each corner of the box. If the box is made of light material, put in an extra bottom so you can bolt these hooks on, thus making them perfectly firm. Use two five-cent brass screen-door handles and fasten one on the top of each end so as to carry the crib. Cover the outside with light blue or pink lining and let it drop over on the inside about one inch and then fasten. Then make four quilted pads for the sides and ends of the crib and fasten these to your lining at top of box, so they will cover the inside. Make a ruffle of dotted swiss to hang outside of the box over the lining, using small brass tacks to fasten it with. When put alongside of the mother's bed it will be found to be just the right height for her to take care of the baby without getting out of bed, and there is no danger of the child's rolling out.—Mrs. G. M. F., Minnesota.

YOU WILL NEVER BE SORRY.

For doing your level best.
For being kind to the poor.
For hearing before judging.
For thinking before speaking.
For standing by your principles.
For stopping your ears to gossip.
For being generous to an enemy.
For being courteous to all.
For asking pardon when in error.
For being honest in business dealings.
For giving an unfortunate person a lift.
For promptness in keeping your promises.

EYE DON'TS.

Don't read facing a light.
Don't read while you rock.
Don't work in a poor light.
Don't write or read or sew lying down.
Don't try to enlarge or brighten your eyes by dropping belladonna into them.
Don't rub your eyes.
Don't use your eyes when they smart and water.
Don't tax them when you are exhausted physically.
Don't forget that eyes need to be petted.
Don't forget that happy thoughts make the eyes sparkle and glow in a most fascinating way.

HOUSEHOLD HINTS.

A simple remedy for cold feet is to drink slowly two glasses of very hot water just before going to bed. It will warm and relax the system and improve the circulation.

Milk will immediately and effectually extinguish the flames from gasoline or any form of petroleum, since it forms an emulsion with the oil, whereas water only spreads it.

Sleeplessness on a cold night may often be relieved by tying a silk handkerchief over the head, which sometimes gets cold while the rest of the body is warm.

To the ordinary combination of warm water and ammonia used for freshening carpets, add a tablespoonful of kerosene and the result will be still more satisfactory than usual.

A molding board makes a very satisfactory extra shelf for kitchen or sewing room, if fastened to the wall with hinges and chains to prevent its sagging when lowered.

A cement made by adding a teaspoonful of glycerine to a gill of glue is a great convenience in the kitchen and is especially good for fastening leather, paper or wood to metal.

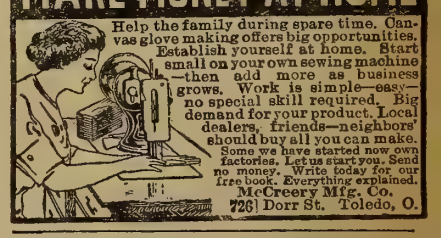
COOKING TURNIPS.

When cooking turnips this method not only prevents waste of a large part of the vegetable, but saves time. Choose medium-sized or small turnips to cook, as they are almost always sound. Wash them thoroughly, leaving peels and tails on; cook in a covered vessel with plenty of water and a pinch of soda. Put them on to boil about two hours before time to serve. Within an hour and a half they are done—try them with a fork. Drain the water off, turn cold water on them and the thin, tender skin will slip off like that of a boiled beet. Cut them, leave whole or mash; season to suit taste and put them in saucepan to simmer until time to serve. This is unquestionably an economical way to cook turnips, besides which they are more appetizing than those prepared in any other way.

AMONG OURSELVES.

As I sat at my desk scanning the letters that the postman had left me there came into my head a quotation from some author, Tennyson, I think: "How far that little candle sheds its beams!" Here comes a question from Iowa and later comes an answer from Mississippi; a reader in the domain of "My Lady of the Snows" comes into life contact with a daughter of the roses of California. Candles, candles burning everywhere and how far the lights penetrate when given the proper focus! Focus is a wonderful thing; have you found out the value of focusing your time, thought, attention on a few well-worth-while things? The Chinese have a saying, "Beware of the man of one book," meaning to imply the strength of him who knows something thoroughly. A focused life like a focused lamp throws great power in one direction at a time. These letters which come to your editor give hints of the focus in the life of each writer. Here Among Ourselves the lights of many gentle lives are gathered up and then sent out in wide sweep to brighten, to lighten, to point out, and those who have eyes, they see. Today we have first a visitor from California, a missionary minister's wife, Mrs. S. H. Seccombe, of Samoa, Cal., who says:

As I have been enjoying your letters I feel kindled to take my pen and visit with you a while, though it must be on paper at this time. As I perused the varied departments I could but wonder if any other dollar-a-year publication was giving its readers so much each week. "The Home" column is filled with such really helpful things, too; the only suggestion I would offer would be that more of you sisters use your pens. What a comfort it is to an isolated woman to receive and answer letters from those with whom she cannot visit. In the work of the ministry (our work) we meet all nationalities, classes and conditions, especially in comparatively new towns; so we soon get to love all. Away off here I have met some of my own dear New England people and also husband's Minnesota people. So, at times, we have almost felt at home. The little farm papers will always seem like a visit from home, too, as I first saw the light on a big farm in the old Pine Tree state. "Are you proud of that?"



CLUB RAISERS WANTED

I want a local subscription representative in each town in Iowa, Illinois and Nebraska, where I do not have a solicitor at present, to take subscriptions for The Homestead during the winter months. An energetic person can make excellent money working for me.

A Justice of Peace and farmer made $347.00 during December, January, February and March last year with practically no effort on his part. Just as he happened to meet his friends he asked them to subscribe.

An old soldier has earned $386.00 in the last year and has not been away from his blacksmith shop to solicit subscriptions.

A lady who had sold extracts all her life took up our work last winter and has made over $300.00 this year without leaving her home town.

It requires no particular ability to become a subscription representative. There is no reason why you should not make from $300.00 to $600.00 this winter, looking after my subscription interests in your locality.

If you prefer premiums to cash commissions, write us for a list of the nice presents we can make you for raising a club in your neighborhood. We have everything useful to give away from egg beaters to sewing machines and gold watches. Address

James M. Pierce, Publisher Homestead, Des Moines, Ia.

asked a friend recently, when I referred to the state of my birth. "Well, you may be sure I am!" I told him, "for I could not possibly be proud of any state that licenses a company of Godless men to demoralize my eight sons and daughters." Proud of it! They say that "prohibition doesn't prohibit in Maine any more than in the minds of a few women," yet one of my earliest recollections is that of seeing boxes taken off an incoming boat from Boston, quickly seized by Wiscasset officers, examined and found to contain what they didn't claim to contain, and quickly demolished. I wonder how your own beautiful Iowa stands? If any of you have temperance literature that you wish to pass on or Sunday-school or other good wholesome reading, we can make good use of it. But write first, so as to get our latest address, as our work is in various places. Hundreds of poor foreigners, who now speak and read English, as well as some of our own Americans, are too poor to subscribe for papers. We try to cheer the county poorhouse inmates, the jail, the cheap lodging houses and lots of other places with whatever good reading we can get. Last Sunday husband had to go to another place, so I took his place at the hospital and spoke to some of the most needy of the entire county. The papers I took along, all Sunday-school papers this time, gave much joy. This is a truly beautiful state, where the birds sing and flowers bloom the entire year. Write me freely. Good land is still to be had at a reasonable price and I can speak advisedly of the northern part of this state. Household help is very scarce and girls' wages high. Any girl or woman who will do housework can command almost her own price in our towns.

Having spent a number of years on the great prairies in an unbroken land I know what it means to receive a bundle of papers, magazines, to restore life to the fainting mind, for minds as well as hearts and bodies must be nourished or atrophy sets in. Perhaps you can do up a little bundle and spare the postage and so cast another "beam."

How it warms the heart to catch through the undrawn curtains a glimpse of happy home life! "Vera" gives us all a tiny look into her North Dakota home, and it is a satisfying peep that we get:

The letter of a "Mother of Three" in a late issue of this paper attracted my attention. From observation and actual experience, I have found that it pays to provide for an instrument and a musical education for the boys and girls. I think it best to get a piano without self-player and invest the cost of a self-player in lessons and music for the children. By learning to play they acquire a love for music and, incidentally, perhaps a greater love for all things beautiful and harmonious. A knowledge of music will provide for amusement when other plans fail. Another argument which should appeal to all parents, be they ever so prosaic, is that where there is music in a home you will invariably find that the young people have good associates, because refined and educated people enjoy visiting at such a place. To better illustrate my point of view, I shall describe conditions in my own home. We have a piano and all the music we desire, both classical and popular—both are necessary, as tastes differ. My sister, brother and myself take turns at the piano while the others sing. Especially is it enjoyable when a crowd of young people come over and all join in. We surely "raise the roof." It makes everybody feel at home and removes any possible embarrassment. But one reason why I would miss our music the most of anything we possess is because of the enjoyable hour we spend together every evening after our work is completed. (We live on a farm, so we have our share of work.) It seems to soothe and quiet our tired nerves to gather around the piano and through singing we unconsciously forget our troubles and cares. Or, if we feel too tired to sing, one of us plays either a quiet reverie or a sprightly selection, whichever we happen to prefer. At all times I have found that "Music hath power to soothe the tired soul."

FARM FOR SALE—320 acres all under good fence and cross fenced into several different fields. Most all of the fence is woven wire. 210 acres in cultivation and the balance in timber, and some of the timber land is good for cultivation when the timber is removed. The timber will more than pay for clearing the same. Part of the land is valley and part is gently rolling, just enough to drain well and does not wash or overflow. The soil is a sandy loam with a clay subsoil and produces splendid crops of all kinds of grain and grass that grow in this country and is also fine fruit land. Bearing orchard for family use. Good garden fenced with chicken wire. Good 2 story 6 room frame residence with halls and porches. 2 good frame barns with drive way through them. One 40x50 feet and the other 44x50 feet. Good frame granary, corn crib, machine shed, wagon shed, chicken house and hog house. A good concrete cellar. The buildings are painted and in good condition and are insured for $3,000. There are 2 tenant houses on the farm, one has 4 rooms with barn and other outbuildings, and the other has 3 rooms, small barn and other outbuildings. Have families living in each one of them. There are three good cisterns, 3 stock ponds and a living well on the farm. ½ mile to good school; splendid neighborhood and good healthy location. Daily mail and telephone in the house, telephone and telephone stock go with the farm. The farm is in good state of cultivation. One of the best grain, grass and stock farms in the county. This farm can be rented ½ (one-half) of all the crops put into crib and stack. There are about 100 acres or more in clover and timothy meadow. The buildings are on the main county road. The farm is 2½ miles from county seat, a town of 2,000 inhabitants, where there is a good ready cash market for anything one has to sell. Will furnish good title. Price $65 per acre, $4,000 cash. Good terms on balance. Address Box 217, Salem, Dent county, Mo.

HOMESEEKERS OF LIMITED MEANS and little experience are making $50 to $300 an acre from poultry, fruit, and general farming in the south, $10 to $30 an acre buys excellent farms. The Southern Railway Lines will find a suitable location. The "Southern Field" magazine free. M. V. Richards, Land & Industrial Agent, Room 60 Washington, D.C.

"Community of interest" is a phrase you have probably heard used before this. "Vera" gives us a practical example of it. There is nothing like having people doing the same thing, living somewhat similar lives, to teach them the great lesson of how much more alike we are in all things than we are unlike in anything. Every such feature as a piano in home life puts far more than is seen on the surface into the lives of all concerned. When you play music by a Russian, sing songs by a Norwegian, feel the rhythm of an Austrian dance or march you come a step nearer to the universal brother of the highest religious thought.

Another focused beam reaches this gathering of Among Ourselves. Amy M. Clark, a newly writing sister, is a community helper. Perhaps you can give her the help she requires:

I have been a silent reader of your bright and cheerful letters for some time and at last made up my mind to drop in among you and tell you how I like your letters, especially the ones relating to what books for the young people to read. I have read a great many books, the best of which I think are Louisa M. Alcott's works. They are all pure, entertaining and educational. Now, sisters, I have a request to make which I am sure someone will grant. We are getting up an entertainment for the benefit of our Sabbath school. If anyone will recommend some tableaux, pantomimes or recitations suitable for this purpose you will be helping in a good cause and I will be very grateful to you. Please excuse any blunders I have made and accept my thanks in advance.

This question of fit things for children to recite is a serious one—there is so much trash published—so much that give false standards, untrue relations—that I hope this will receive some really well-grounded replies, for here some sound seed may be sown. It is worth while to cultivate the librarian of your state traveling library on this point as well as in the town nearest to you that has a library.

Now Mrs. Grace Jenkins has the floor; she will give us out of her experience what may be useful to our homemakers:

I write to tell you how much I enjoy your talks, the Home and Homemaking helps and also the many letters that give us the benefit of what the writers have learned by experience. I am sure we all profit by what we read, although there are many, like myself, who never sit down to write and tell you about it. I can give just a few home hints this time. I am not much of an authoress, but I love to spend my spare time (and it is very spare, as I have three little ones under six) in reading and with paper and pencil, taking little lessons from the children, doing and making verses for them. How many mothers play with the children? I think that is the chief joy of having the little children with us. I always devote Sunday afternoon and an hour before bedtime to read, play games or tell stories or make candy, anything that suits the childish fancy. In warm weather we take a walk or sometimes a ride through the country to take lessons from nature. In cold weather dip a rag in vinegar to wash windows and they will not freeze. In making pie crust turn pie pan upside down, put your paste on, prick with fork and then reverse, and you will always have an even crust to fill. If baby has a bad cold give castor oil in small doses and put a raw onion in a bag or stocking, crush the onion until the juice comes through, then tie around baby's neck. The odor from the onion makes the child sleep and you have a good night's rest as well. [Be careful about using castor oil on account of the after effects.]—Editor. If a child swallows a penny don't worry yourself sick. It will come through in forty-eight hours. A large box for baby to play in is the best baby tender you can get when baby begins to sit up alone. Put a heavy quilt in the box to sit on and playthings, and he will be good two or three hours. A teaspoonful of vinegar in a dark cake that has molasses in it will shorten and keep it moist twice as long.

A personal query from Mabel for your attention:

Please tell me how grease or oil may be taken off of white buck shoes. I have tried washing them with warm water and soap, but that does not remove it. I will be very thankful to anyone who will suggest something. Also please tell me about a safe way of removing freckles from the skin.

The "merry" feature of Christmas which has grown so much of late years, makes anything like sickness seem then out of place to very many, but no time or season is exempt from the last visitation. One of our most valued friends, one who for years has been "Among Ourselves," passed to the other side just before the Christmas season--Mrs. Vanderhoef left us for the larger life after months of intense suffering. I love to think that these "little candles" of ours have not been snuffed out and the surrounding darkness made that much darker for the rest of us, but I am happy in the thought that these "candles" are lifted from one room to another, from here to where they will shine brighter in a broader service.

Here is a little poem from the pen of "Literature Lover" that has a good ring to it, though it is tinged with the doubtful philosophy of the old proverb, "Where ignorance is bliss 'tis folly to be wise:"

THE SOUL UNMARKED.

As I gaze from my window at dawning,
On a beautiful white world unmarked,
My heart is often filled with a longing
For a life untarnished, undarked.

To me seems this white, gleaming surface,
With its fulness of soft, snowy white,
As a life with a definite purpose,
Unstained in its luster of light.

How often we strive for the highest,
But to think that this life is unjust,
For we struggle and strive, but too often
Ere night we are trampled in dust.

So, too, is the beautiful picture
That Nature before us has spread,
For by night the white surface is crumpled
And marked with the strife and the tread.

Oh, would that our lives might be ever
As pure as the white world at dawn,
Instead of so darkly disfigured,
When the shadows of eve are long drawn.

What pictures come before one thinks "The coming of the snow." What has the coming of the snow meant to you? Have you shared in the feeling of the poem or have you seen a different picture? Won't you tell us about it? We would be glad to hear in "Among Ourselves." What wonderful pictures the artists of Europe and America have drawn from the coming of the snow! How writers have delighted to put snow seasons into words that will live forever, and great musicians have sensed their emotions in such sounds as thrill audiences to the heart! When you stand at your door, sit by your window, or ride out in the expansiveness of nature, are you not stirred? Can you express it? What recollections does it bring up? Tell us.

THE YOUNG FOLKS

Letters and Articles for this Department Should be Addressed to Aunt Mary, Hawley, Minnesota.

LEARN THIS BY HEART.

A gaudy dress and gentle air
May slightly touch the heart,
But it's innocence and modesty
That polishes the dart.
—Burns.

ROLL OF HONOR.

Ayfa	Lady Kate
Badger Boy	Lovelight
Cherry Blossom	O. L.
Corn Husker	Oriole
Dante	Partner
Fern	Rosetta
Humpty Dumpty	Schoolmate
Irene	Spit Fire
Jolly Jack	Spring Beauty
Kansas Girl	Topsy Turvy
Kertella	Zamanda

These young people have won their places here by sending in good original stories, verses or letters, written on one side only, with full address.

Cleo and Irene have been given pansy badges this week for three publications of their names on the roll of honor. Remember to give the dates your name appeared when writing for the badge.

Partner has won his silver honor badge. All who have the pansy badge may earn a silver badge in the same way—three times on the roll of honor after the notice of winning their pansy badge has been printed.

Snowdrop and Chipmunk forgot to give their real names, so they don't get on the roll this time.

THE FUN I HAD.

One sunny day I went to play
Out in the hay.
I played all day out in the hay:
Much fun I had that day.
—Rosetta, age 11.

FOR A STORMY DAY.

If you don't know what to do with your brothers and sisters when the snow is deep outside and it is cold and stormy, just get the big catalog, a tablet and pencil, and sit down around the table. Then let each child choose a coat, shoes, stockings, dress, hat, and all the other clothing they wear. Put down on paper what articles each one chooses, and the price, and then add together what it costs for each. When it is done, show it to your parents, and see what they say.—Dante, Wis.

Beheadments.

1. Behead a wrap and leave a monkey. 2. Behead spectacles and leave girls. 3. Behead a color and leave writing fluid. 4. Behead something to write on and leave tardy. 5. Behead a two-wheeled vehicle and leave skill. 6. Behead what thread is wound on and leave a puddle. 7. Behead a three-legged seat and leave something to work with. 8. Behead a fruit and leave the organ of hearing. 9. Behead to brush and leave to cry. 10. Behead what's on your head and leave what you breathe.—Humpty Dumpty, Ill.

Aunt Mary offers a bunch of ten dandy postcards for the first perfectly correct list of answers to these beheadments. Only one prize will be given.

New Year Resolutions.

How many made resolutions for the New Year? I hope you all made good ones. I am going to tell you the resolutions I made:

1. Resolved, not to take a drink of liquor in any form, unless it be in

case of severe and continued sickness.

2. Resolved, not to use any profane language throughout the year.

3. Resolved, not to tell lies to anyone or about anyone.

4. Resolved, to treat all dumb creatures kindly, and to do harm to none.

I hope that I may be able to keep them. I hope you all made good resolutions and will keep them.—Partner, S. D.

Finish This Story.

One December morning Will and Tom buckled on their skates for the ten mile trip down the river to Melbourne, to take their fall catch of furs.

It is growing dark when they were returning home, and suddenly they were surrounded by a pack of wolves. In an instant they were going fast, leaving most of the wolves away behind.

Some of them soon caught up, and one large wolf leaped upon Tom, bringing him down instantly. Will, seeing the fate of his brother, fainted.

Can you finish this story so as to save both of the boys? This, and a very weak ending, was written by Chipmunk. Now, Aunt Mary likes to see all stories end happily, yet naturally, and she offers a prize of twenty-five cents to the boy who writes and sends the best ending for this story, before February 28th.

An Interrupted Picnic.

I am a new cousin, but have been a continuous reader of the Young Folks Department for nearly two years and like it fine. I am going to tell you of the picnic our school had two years ago. We had it in a neighbor's grove about a quarter of a mile north of the schoolhouse. We took our lunch baskets and started about nine o'clock.

We boys had a ball team and were going to play the men folks. The first game stood 14 to 9 in favor of our team. By this time it was dinner time, so we went and had dinner, which was a very good one. After dinner we started to play another game of ball; we had played two innings when suddenly my father noticed that smoke was rising above the trees of a neighbor's house which was about one-half mile from where we were, we felt sure the house was a fire, and so it was. We ran all the way there. We found the man of the house lying close to the house where he had fainted. He had been planting corn in the field when he noticed the fire. He left his horses and ran to the house, and ran in the kitchen door, and crawled out the bedroom window, where he fainted, and there we found him. The fire had been too hot for him, and as he could not save anything, but crawled through the window and that was all he could remember.

We stayed there and watched the barn so no sparks would set it on fire, too. We stayed there till four o'clock and then went home; but our picnic had been interrupted.—Corn Husker, Neb.

PLEASANT FIELDS OF HOLY WRIT

SAVE for my daily range
Among the pleasant fields of Holy Writ
I might despair. Tennyson.

The International Sunday School Lesson

FIRST QUARTER Lesson IV. Genesis IV., 1-15; January 26, 1913

CAIN AND ABEL—THE STORY.

The next picture flashed upon the inimitable canvas of Genesis shows the seed of God and the seed of the serpent in that mortal combat which had just been foretold. The tragic scene holds the eye. The stream of human life seems there to part. On the one hand it flows in larger volume, casting up mire and dirt, foaming out its own shame, sending forth its ominous detonations, falling at length with a Niagara roar into the abyss of hell. The smaller stream has a gentle flow. Heaven is mirrored on its surface. It empties at length into the sea of glass before the throne. The eldest brothers of the race, on a Sabbath, approach the gate of the lost paradise, where there was Shekinah, flaming from between the sentinel cherubim. They build their respective altars; it is possibly the very first instance of sacrifice. Cain, in his perversity, chose to make a eucharistic offering. He presented his own works. There was no confession, contrition, or faith. Abel makes a piacular sacrifice. In it there was a confession of sin, an expression of faith. There was no arbitary election of Abel, or reprobation of Cain. The case was decided by the subjective state and intent of the worshiper's heart. The form and quality of the gift was the material and objective expression of this. Abel's offering complied exactly with the form no doubt explicitly prescribed. God turned the light of His countenance upon Abel's lamb, with its ensanguined fleece, and set it on fire. That moment the flame of murderous jealousy sprung up in Cain's heart. His lofty pride in himself and the fruits of his industry was cut to the quick. He beguiles his brother into the open. He mockingly preaches to him there. He blasphemously rails against God's partiality, until his fiery speech, like intoxicating liquor, has nerved him to his deed. He strikes the fratricidal blow. How soon at best judgment and retribution follow the sinner! There is neither escape nor appeal from the Great White Throne. The cumulative and definite power of sin manifests itself. Adam fled. Cain dared approach the Theophany after his deed. Adam confessed. Cain denied, with insolent additions. Cain's repentance was judicial. It was the groan of the villain who feels the halter draw. Like all murderers, "the earth full of avengers," and is in terror. In the first great contest between the serpent seed and the seed of God, the latter, as in many a subsequent encounter, seems to be in defeat. But, after all, it is only the heel that is wounded. Abel survives in those who imitate him. Though dead, he speaks. Jesus ranks him head of all the holy martyrs.

The Teacher's Lantern.

Sin's hideous features stand out in blackest silhouette in this paragraph. Adam and Eve realize the hateful stream of hereditary influences their sin has started down the ages. How poignant the first mother's disappointment when she discovers that he, whom with "womanly precipitancy" she has called the "Gotten One," turned out to be not a "crusher of the serpent," but one of the serpent's seed! That motherly foreboding which led her to name her second son "swiftly disappearing breath of life," had a terrible realization. Well may Schiller sing:

That evil deed's avenging curse it is
That evil evermore it shall beget.

These lessons reveal God as directly interested and watchful in the moral actions of his intelligent creatures. God is after the sinner. He was on Adam's track before sundown, and Cain's as early. The motives and modes of worship are here portrayed. There is no finer commentary upon the incomparable parable of the Pharisee and Sinner. Serpent seed and God's seed—there are but the two on earth. Every living human being falls into the one or the other class.

Ask your neighbor to subscribe for The Homestead.

AGENTS SOMETHING NEW

Brandt's newly patented Combination Shaving Brush and Beard Softener. Little rubber fingers attached to shaving brush ends hand rubbing. Only sanitary method of rubbing in lather to soften the beard. Just the thing for a man with wiry beard and tender skin. Gives a facial massage with every shave. Prevents ingrowing hairs. Bristles set in rubber. Sells on sight; every man wants one. SLED THAT STEERS, FREE

YOU CAN HAVE ONE.

Send No Money

This is the greatest sled for boys and girls ever manufactured. Known all over the country as the "sled that steers." Runners are spring steel, and when you coast down hill a slight pressure of the foot curves them and steers the sled to one side. No digging in the snow with your heels or plowing the snow with your foot. Not one boy in a hundred has one of these sleds. You can have one for a little easy work. Write me today and I will tell you all about it.

A. M. PIPER, 840 POPULAR BUILDING, DES MOINES, IOWA.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

5589 Lady's Kimono—The kimono illustrated herewith has a little fulness in front and this is taken up in shirrings at each shoulder, while the back is plain and scant, fitted by a center seam. Any of the crepe materials can be used to make this garment.

The pattern, No. 5589, is cut in sizes 32, 36, 40 and 44 inches bust measure. Medium size requires 6 yards of 44-inch material. Price of pattern, ten cents.

5160 Lady's Apron—This apron is made with a bib which protects the front of the waist. Muslin or sateen can be used to make this apron.

The pattern, No. 5160, is cut in one size and requires 2 yards of 36-inch material. Price of pattern, ten cents.

6007 Lady's Dress—This dress is made with the stylish sailor collar and turned-back cuffs. It closes at the front and is made with a removable chemisette. It can also be made with long or short sleeves. The skirt is a five-gored model. Serge or cheviot can be used to make this dress.

The pattern, No. 6007, is cut in sizes 32 to 42 inches bust measure. Medium size requires 6½ yards of 36-inch material with ⅝ of a yard of 27-inch contrasting goods. Price of pattern, ten cents.

5328 Child's Box Coat—This simple coat is cut on plain box lines. It is double breasted and finished at the neck with a wide collar, while inside the opening at the neck there is a shield and this is attached to a standing collar. The sleeves have a very little fulness at the shoulder and a turned-back cuff at the wrist.

The pattern, No. 5328, is cut in sizes 2 to 12 years. Medium size requires 1¾ yards of 44-inch material. Price of pattern, ten cents.

Grading Seed Grain Increases the Profits.

By M. Coverdell.

YOU ask our opinion on the subject of grading for seeding purposes. We will first take notice of the process through which this graded grain is secured and see if there is any loss occasioned by it. The fanning process not only removes all seeds foreign to the one we desire to sow, but it separates all small, light, ill-shaped, shriveled grains.

These undesirable seeds are not wasted, but can be fed to the stock and poultry, while, if they were used for seeding purposes, they would be practically lost, since they cannot possibly propagate healthy, productive plants, and when deposited in the earth simply rot away or produce a growth that will yield little or no grain.

Nor does the loss end simply with the wasting of these puny seed when sown without grading. Not only is one's time, labor and expense of seeder and teams wasted, but the space taken up by these weak seeds will lie practically idle for the season, the quality of the grain crop will be lower and the yield much lighter than if the seed had been graded before sowing.

It seems a waste of space (to the progressive farmer, at least) for us to argue that a plump, solid seed will propagate a stronger and more vigorous plant when deposited in the ground than will a soft, shriveled or in way damaged grain, which is low in germinating qualities. This being the case, however, the grain produced by the graded seed at harvest time is pretty sure to be heavier and of higher quality even than the one planted. Not only that, but by careful, systematic grading of the seed before sowing every year, the yield and quality of the crop will continue to increase gradually, the strain growing stronger and more pronounced in type, productiveness and purity each succeeding season.

Considering the moderate cost of a fanning mill, that it will last practically a lifetime, and can be operated to a big advantage when there is little else to do (the latter part of the winter), buying one would seem but a wise investment. Briefly summarized, its use prevents the waste of land by sowing seed that has not the vitality to avail itself of the soil's fertility; separates and saves these weak, undesirable seeds for feeding purposes, and guarantees a grain product at harvest time that is superior in every respect to the one produced by ungraded seed a product which can be fed to live stock with greater profit; will overweigh and command a premium if sold on the market, and furnish seed for sowing that will insure the quantity and quality of future crops.

SHEEP SALE---SHROPSHIRE EWES
CORNING, IOWA, FRIDAY, JANUARY 31, 1913

125 HEAD registered ewes safe in lamb to Imported Minton, Buttar and Instone rams. Quality and type will please you. Your price buys them. Piper Bros., Auctioneers.
DANIEL LEONARD & SONS, - - CORNING, IOWA.

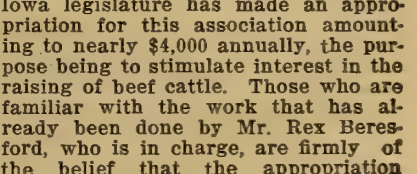
H. H. REED, - MARENGO, IOWA.

REGISTERED Shropshire rams and ewes of the best breeding and quality. Prices reasonable.
Willard Miller, R. F. D. No. 2, Anita, Iowa



THIS department is edited by a gentleman who has long made the management of sheep a special study. He will be pleased to answer, in this department, all questions of general interest relating to the care of the flock and other kindred topics. Address inquiries, communications, etc., in relation to sheep, to this office.

WINTER CARE AND FEED OF PREGNANT EWES.

To the Editor of The Homestead:

The sheep is the most sensitive and fragile in construction of any animal on the farm, the ewes—and more especially the pregnant ewes, being even more delicately constituted than the males of the flock, yet, there is a constant neglect prevalent among the majority of farmers with respect to the management of these animals upon which they depend for their valuable lamb crop.

In the face of such conditions, is it to be wondered at, that so many farmers condemn sheep raising as unprofitable? When the lambing season comes, and the ewes begin to lose their lambs, or drop puny, weak, undersized ones, all as a direct result of their keeper's careless management, he ignorantly blames the helpless sheep for his "ill-luck." Even where these slack methods are practiced, sheep often net their owners a neat profit. In such cases, what wonderful dividends they would return, if properly housed, fed and cared for during their period of pregnancy!

In ninety-nine out of every one hundred flocks of sheep, they are allowed to range with live stock of all kinds, sizes and dispositions. Pregnant ewes are apt to be injured, crippled or killed in such cases by being run over, bitten, kicked or hooked. Abortion, or the dropping of small, weakened lambs result from such practice. Even the excitement and exertion of a close chase by some other animal is liable to result in the above-stated damage to the ewes. Pregnant ewes should not be in a lot where there are hog guards to be jumped over in leaving and returning to it. A little crowding of the flock while leaping these guards, a sheep is overbalanced, falling on the guards, and her struggles, short they may be, are very painful and injurious to her, especially on account of her delicate condition, and may result in abortion. The detrimental effect of such abuse is sure to be felt by her dropping either a dead or stunted lamb at lambing time.

Any straining or excitement of a ewe while in her state of pregnancy will wield a deteriorating influence on her and her unborn offspring. Where a ewe is caught in a position that causes her to strain, abortion often follows. Passing over a fence that has been laid down in such a manner as to cause the ewe to drag or struggle over it, is to be avoided. Any protruding nails, snags or projecting pieces of boards around where the pregnant ewes are kept should be removed to prevent accidents. Dogs, or at least strange ones, must be kept strictly away from the flock in which there are pregnant ewes. Who has not seen the ewes stricken with sudden fright at some dog, dash off at full speed; then whirl about with head erect, dilated eyes and trembling bodies, to see what was coming next? Such fear is at the expense of the pregnant ewe and her unborn lamb. The shooting of firearms, or other loud or unusual noises, should be discouraged around the pregnant ewes.

While the pregnant ewes wear heavy coats of wool, they should not be exposed to severe cold rough piercing winds, snow, rain or sleet, the three latter being especially harmful. The thick, dense covering of wool becoming damp, it is a long time in drying out, so that ailments of the most serious character are liable to follow exposure to snow, rain or sleet at this season. It is of course an easy matter to overdo the housing of sheep. They do not require as close quarters as the other stock; shelter from the rough elements is what they must be provided with, and if they are confined in anything but an open-front shed, there should be ample ventilation. One always should manage to turn the pregnant ewes out every day when the weather will permit, as the sunlight and open-air exercise are two of the pressing essentials to their good health and vigor. Damp quarters are to be avoided, the floor of their sleeping place being kept clean, dry and level. These provisions for dry; comfortable and sanitary quarters will demand even closer attention as the lambing period draws near, and if a few individual stalls for the confinement of the pregnant ewes can be provided, where they can be given special care and feed, they are more apt to pass through this strenuous period in good condition and produce strong, vigorous lambs.

Most sheep raisers do not give enough attention to the feeding of pregnant ewes. They should be provided with rations especially adapted to their condition from now on till lambing time. Soiled, musty or moldy feed of every kind is to be carefully avoided, as they are productive of various digestive ills, and their continued use will bring on abortion or other complications when the lambs are dropped. Roughage of a woody, tough or fibrous consistency, is also to be fed very sparingly, if at all. Such roughage as timothy hay, or thoroughly ripened millet, and oat or wheat-straw, are the ones that are most commonly fed through ignorance or supposed necessity. If these are the only roughage feeds on the farm, it will pay any sheepman big profits to sell off such feed and invest the money received for it in more succulent roughage, such as clover, alfalfa, and oat hay, the latter having been mown while the grain was in the "milk." All sorts of roots and vegetables, such as cabbage, beets and turnips, are especially beneficial as a tonic and appetizer for pregnant ewes. The grain portion of the rations should be formed of a variety. Corn alone is not advisable, as it is too heating for the ewe in her already congested condition, but some corn is beneficial in maintaining body heat and building up fatty tissue. The ewe should be kept only in normal flesh, however, as a fat ewe is more apt to bring unsatisfactory results at lambing time than one in just ordinary shape. One part corn chop, one part oats and one part bran, with a handful of oil meal or cottonseed meal added for each sheep, forms an excellent ration for the pregnant ewes, one that will nourish the body properly and maintain the unborn lamb; keep the digestive and assimilative organs in smooth, easy running order; regulate the bowels; and act as a soothing panacea to congested conditions peculiar to an animal in a state of pregnancy; all of which not only insures the health and vigor of the developing lamb crop, but furnishes the ewes with a supply of energy from which they can draw a profuse flow of milk for the profitable support of their young.

Cole Co., Mo. Albert Marion.

IOWA BEEF PRODUCERS' MEETING.

The annual meeting of the Iowa Beef Producers' Association will be held at the Savery Hotel, Des Moines, Iowa, on Wednesday, January 29th, beginning at ten o'clock. The purpose of this meeting is to elect officers for the ensuing year and to receive a report of the work that has been done since the association began operations last March. A program has been prepared for the evening session which will be devoted to the discussion of the various phases of the beef industry.

The Homestead hopes to see this meeting well attended. Most of our readers are aware of the fact that the Iowa legislature has made an appropriation for this association amounting to nearly $4,000 annually, the purpose being to stimulate interest in the raising of beef cattle. Those who are familiar with the work that has already been done by Mr. Rex Beresford, who is in charge, are firmly of the belief that the appropriation should be continued and, therefore, the coming legislature will be importuned for further support.

That there are thousands of acres of marsh land in upper Wisconsin which are admirably adapted to the production of cranberries is the belief of F. E. Huser, of the Wisconsin College of Agriculture. Wisconsin growers are already raising, according to his report in a recent issue of the Wisconsin Horticulture, 12 per cent of the cranberries of the United States. However, if the industry is to develop in the Badger state as it should, the growers, it is believed, will have to change their methods of culture and follow the clean culture system as they do in the East where good crops and safe returns on the capital invested are more certain.

Shirley President Suspenders
Guarantee on each pair

They're *so* Comfortable

JUST the suspenders you've been wanting—because Shirley President Suspenders move freely—won't pull on your shoulders—and don't strain. Millions of men have proved it—why don't *You*?

Wear a pair for a month. If you don't like them, we will buy them back at price you paid.

Made in Light and Medium Weights. Extra lengths for tall men. Each pair guaranteed.

Price 50 cents everywhere.

The C. A. Edgarton Mfg. Co.
Shirley Guaranteed Suspenders
504 Main Street, SHIRLEY, MASS.

Increase Your Crop 8 to 15 Bushels to Acre

The Brillion Clod Crusher will increase your yield from 8 to 15 bushels per acre. It crushes, pulverizes, rolls, levels and packs the soil. Makes a perfect seed bed which retains all the moisture a few inches below the surface. Free booklet tells all. Write today.

FIELD MEN.

M. T. White, western Iowa and Nebraska (north of the Platte river). Address 4015 Izard St., Omaha, Neb.

Carlos C. Palmer, eastern half of Iowa and Minnesota. Address 2714 High St., Des Moines, Iowa.

Fred V. Johnson, Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address 924 Hearst Bldg., Chicago, Ill.

Ray L. Gribben, northwestern Iowa, South Dakota and southwestern Minnesota. Address West Hotel, Sioux City, Iowa.

A. T. Cole, Missouri, Kansas and Oklahoma. Address 3900 Holmes St., Kansas City, Mo.

H. E. Browning (swine division), Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address Hersman, Ill.

John C. Halderman, Kansas. Address Inez Hotel, 9th & Troost Sts., Kansas City, Mo.

A. W. Hopkins, Wisconsin. Address 201-202 Washington Blk., Madison, Wis.

J. C. Price, southern and western Nebraska. Address 145 So. 28th St., Lincoln, Neb.

C. C. Carlin, special assignments in central, southern and northern Iowa. Address 715 Clinton Ave., Des Moines, Iowa.

FIELD NOTES.

Some splendid Belgian stallions and mares are advertised for sale by Ed Boll, Jr., Scribner, Neb., on page 53.

Write C. W. Hurt, Arrowsmith, Ill., for a catalog of the big breeders' horse sale at Bloomington, Ill., January 28th to 31st inclusive.

Fred Hanks, Winnebago, Minn., has a new advertisement on page 53 of this issue in which he is offering for sale some Duroc Jersey bred gilts and one Shetland stallion.

Big-type Poland China gilts, bred for March and April farrow, with lots of size, bone nad quality, are offered for sale by H. A. Wohlsdorf, Lawler, Iowa, in his advertisement on page 42.

In an advertisement on page 51 S. J. Philson, Harlan, Iowa, announces that he is prepared to furnish high-class Chester White sows and gilts bred for March, April and May litters.

Taylor & Jones, the stallion importers at Williamsville, Ill., announce they have a little booklet ready for distribution, and that they will be glad to send one to any reader of this paper who will write for one, mentioning The Homestead.

The Minneapolis feed grinder, advertised on page 9, is sold direct to farmers on a free thirty days' trial, particulars concerning which may be learned by writing to Minneapolis Separator Company, 334 Erie St., Minneapolis, Minn.

Remember the Poland China sale of James G. Long at Harlan, Iowa, on January 24th. He will sell thirty head of B Wonder sows in this sale and four daughters of Fesenmeyer's celebrated old boar, A Wonder. Make it a point to be at his sale.

Going to the postoffice is getting popular again since farmers have bought so many Mitchell cars. The Mitchell is such an easy runner and it is such a pleasure to ride in it that the old-time visits to the postoffice have been resumed in a great many instances throughout the country. The advertisement of the Mitchell car on page 6 is worth reading by those who have not yet purchased cars. It gives a lot of interesting facts. Other important information may be secured by writing Sears Automobile Co., 923 Locust St., Des Moines, Iowa.

Perry O. Brown, Lamoni, Iowa, offers Short-horn bulls for sale on page 53 of this issue.

Scotch and Scotch-topped bulls are advertised for sale by M. A. McWilliams, Wall Lake, Iowa.

Some high-class Poland China bred sows are advertised for sale at private treaty by Wigstone Bros., Stanton, Ia., on page 50.

E. F. Escher, Manning, Iowa, is closing out all of his big-type Poland China sows at private treaty. See advertisement on page 50.

Chester White sows are offered for sale by Frank A. Gould, Rockwell City, Iowa. He also has a few boars to offer. See advertisement on page 51.

P. J. Eggers, Denison, Iowa, has a nice bunch of Percheron stallions on hand and will be pleased to have those contemplating buying to call and inspect his horses. See page 54.

John E. Griffith, Washington, Iowa, can supply Aberdeen Angus bulls and females of the leading popular and reliable families at a price within reach of any farmer. See page 52.

Thirty-eight head of good, useful Scotch-topped Short-horns, including seven young bulls by a grandson of Imp. Cock Robin, will be sold at public sale February 25th by R. M. Parker, Midland City, Ill. Write him for a catalog, mentioning The Homestead.

The Hampshires advertised on page 51 by J. Crouch & Son, Lafayette, Ind., are immunized against cholera. Their herd is headed by General Allen, champion at the International Live Stock Exposition, and early buyers can have the pick of over 150 head of desirable young stock.

Level farms of rich, clay loam soils, located near live cities and towns and well watered by rivers and creeks and having an abundant rainfall, may be purchased at low rates in the cut-over sections of upper Wisconsin. For further details write the Wisconsin Advancement Association, 317 Caswell Bldg., Milwaukee, Wis.

J. Nissen, Meservey, Iowa, is closing out his herd of Aberdeen Angus cattle. On page 52 of this issue he has an advertisement in which he is offering for sale eight cows, two two-year-old heifers and seven calves, also his herd bull, Benton N. 134802, a three year old that was champion as a yearling at the North Iowa Fair.

An advertisement of the West Side Nursery and Fruit Farm will be found on page 17 of this paper. This nursery is making a specialty of flower collections, small fruit collections and berry collections at low prices, or as a premium with $10 orders. These are all described in an illustrated circular, for which write to West Side Nursery, Postville, Iowa.

Anyone desiring a few choice registered Holstein cows, heifers or bulls can make their own selection from a herd owned by C. B. McCanna and maintained upon his Edgewood Stock Farm near Burlington in Racine county, Wisconsin. All of his animals have been tuberclin tested by the state veterinarian and will, therefore, be regarded as unusually free from the disease. See page 24.

A poultry book which gets right to the heart of those subjects most essential to success in poultry raising has been prepared and is sent free to readers of this paper who ask for it by the X-Ray Incubator Company, whose incubator and brooder advertisement will be found on page 27. The book also describes the X-Ray incubator. Write for it. Address inquiries to X-Ray Incubator Company, Wayne, Neb.

Mason & Brackmyer, Morrison, Ill., will hold a sale of Duroc Jersey bred sows on January 28th. They will sell fifty head sired by S. E.'s Crimson Wonder, State Fair Col. and Z. K.'s Col., and they will be bred to Chief Orion, Royal Col. and Mason Wonder. Any of our readers in need of some useful Duroc Jersey sows should arrange to attend this sale. See advertisement on page 52.

Some splendid Belgian stallions and mares are advertised for sale by Ed Boll, Jr., Sribner, Neb., on page 53. Some of these young stallions were leading winners at the Nebraska State Fair and the Interstate Fair last fall. He also offers a splendid span of five-year-old mares and some cracking good young fillies. When writing Mr. Boll about his Belgians kindly mention The Homestead.

H. C. Mehring, Manson, Iowa, whose advertisement appears on page 42, informs us that he has a fine lot of Scotch Collie pups for sale. These are all well marked and from the highest breeding. He has the right kind with prices to suit. Write him for prices and description. He ships over the Illinois Central and Rock Island railroads. Address H. C. Mehring, Manson, Iowa, R. 2, mentioning The Homestead.

An exhibitor of Poland China hogs at the Iowa State Fair last fall won first on boar in class under six months with a grandson of Long Prospect. He also took first and third ribbons on sows under six months with the get of a son of Long Prospect. This information is of interest because of the fact that Wm. Lentz, Ankeny, Iowa, had Long Prospect in service in his herd for a considerable length of time and retains in a large degree the blood carried by the winning pigs mentioned. Mr. Lentz expects to hold a brood sow sale shortly at which he will offer for sale animals closely related to those mentioned. In addition to winning at the Iowa State Fair, the same pigs gathered in like honors at the Minnesota and South Dakota State Fairs.

The advertisement of David Roberts Veterinary Company on page 25 is of general interest. Principally it presents for consideration Dr. Roberts' practical "Home Veterinarian," a big, good book full of facts profitable for stock raisers to know, and one which may be had without cost, or rather by a postal card request sent to the David Roberts Veterinary Company, 9121 Broadway, Waukesha, Wis.

Framers are, of course, always interested in the proper shoeing of horses. Those who want it rightly done will be interested in the advertisement of the Capewell nails to be found on page 6. The Capewell horse nail has been in use for thirty years and its value has been completely demonstrated. Every good blacksmith should use it. A pamphlet describing all its good points may be obtained by writing to Capewell Horse Nail Company, Dept. A, Hartford, Conn.

Now that spring is approaching and farmers will be compelled to get out in wet and muddy weather, it is of some importance that they be provided with boots capable of preventing feet from getting wet or cold. This is just the kind of boot made by the Mishawaka Woolen Mfg. Company and advertised under the trademark of "Ball Band." If additional information be desired send for illustrated booklet to Mishawaka Woolen Mfg. Company, 315 Water St., Mishawaka, Ind. See page 11 for advertisement.

Under recent date Chas. Irvine, importer and breeder of Belgian horses, advises us that he has just sold a pair of mares to a Canadian buyer, three good yearling mares to J. Seibert, Grimes, Iowa, and one mare to J. W. Thompson, Ankeny, Iowa. He still has on hands a fine selection of both stallions and mares and will be glad to show them to prospective buyers. See advertisement on page 54. For any additional particulars write to Chas. Irvine, Ankeny, Iowa.

S. M. Thompson, Birmingham, Iowa, writes as follows: "My stock is in fine shape and I am anxious to close them out at a low figure. To show that my patrons are pleased I quote from a customer and you can see what he has to say about the pig I shipped him. 'I received the pig in good shape. He is a good one and in fine condition and is O. K. I thank you many times.' Anyone being afraid the stock will not be what I represent it to be will do well to read this man's experience." If you want Chester Whites see page 51.

Of course, there are a great many good incubators on the market, but Sam Thompson declares in his advertisement on page 26 that the Fairfield incubator is just a little in advance of most others. It is worth while for prospective buyers to read fully the statement Mr. Thompson makes with reference to his guarantee, which, aside from insuring a 90 per cent hatch, covers the manufacture of the machine and other points at which an incubator would need any guarantee. The free catalog tells all about it. Write for it to Sam Thompson, President Nebraska Incubator Company, 99 Main St., Fairfield, Neb.

We have before us the annual garden catalog of Cole's Seed Store, Pella, Ia. As usual, it is replete with gardeners' and flower growers' information as well as handsomely decorated by engravings of practically all varieties of garden and flower seeds. Cole's Seed Store is one of the old standby Iowa seed-selling institutions. Each year it has persisted in furnishing patrons with absolutely dependable seeds and at a reasonable price. Some special bargains in flower seeds are this year offered. You may learn all about them by obtaining a copy of the catalog, for which write to Cole's Seed Store, Pella, Iowa. See page 15.

An illustration on one page of the Studebaker almanac for 1913 shows a pioneer cabin in which the almanac was probably the only literature to be found. Almanacs have improved since that time and the Studebaker almanac represents about the latest word in that improvement. It starts in on the very first page by giving facts that every farmer ought to know. All the usual almanac calculations are summed up in a single page where a glance will show any particular item wanted. Each month's almanac is accompanied by a table of historical facts that are as good as a big volume of history. Every alternate page contains a condensed article on some feature of farming. The whole is prepared in an attractive way that makes it a desirable addition to the library table of every farm. It may be secured without cost by writing to Studebaker Mfg. Co., South Bend, Ind.

Breeders of Poland China hogs who are in need of herd boars of approved lines of breeding should consult the advertisement of the dissolution sale of the Menzie Poland China herd on page 50 which announces a clearing up sale of the entire herd on February 4th. In this sale will be a two-year-old boar by the noted big hog and representative of the big strain, Columbia Chief 2d. On the side of the dam this hog traces to some of the more popular tribes produced by the Peter Mouw herd. He is right in every way, a big fellow and a proven breeder. Another two year old is C Wonder. This fellow is by B Wonder, he a son of Fesenmeyer's A Wonder and a grandson of Columbia Chief 2d. On the side of his dam he traces to Dude's Wonder and Gay Monarch, a rare combination of size and quality. This hog weighs 800 pounds today. There will also be sold a yearling by Mammoth Jumbo and out of Lady Haivor 2d. Taken as

a lot, the consignment is a remarkably good one. Address inquiries to Anna E. Sharp, administratrix, Hampton, Iowa.

The big advertisement of the Belle City incubator on page 26 is full of information for poultry raisers. It gives some of the reasons why the Belle City is so popular among those who want to raise early chicks and do it at the smallest expense of labor and the least loss of eggs. The Belle City is sold under absolute guarantee at remarkably low prices, with freight prepaid. For these low prices write to the Belle City Incubator Co., Box 52, Racine, Wis.

That popular tool grinder, the Luther, is again advertised on page 11 of this paper. A grinder of this sort is essential on every farm because it grinds quickly, with little labor and does not draw the temper of the tools ground. The Luther Dymo-grit Compound Grinder will sharpen cycles, disks, axes, saws, plow points, ensilage knives, etc., in the shortest possible time. A free book on tool grinding and a liberal free offer on the grinder may be secured by writing to the Luther Grinder Co., 412 Stroh Bldg., Milwaukee, Wis.

The illustration in the advertisement of Kendall's Spavin Cure on page 25 hints at the next month's work, which will demand that the horses go into the field in good condition. For nearly forty years Kendall's Spavin Cure has been a standard remedy for the ills of the horse, and it should be found on every farm. Read the advertisement carefully. It gives many testimonials. The preparation may be obtained from druggists at $1 per bottle. A free book, which is in itself an encyclopedia of veterinary advice, may be obtained by writing Dr. B. J. Kendall, Enosburg Falls, Vt.

That old-time seedsman, R. H. Shumway, Rockford, Ill., starts his annual advertising with an announcement of good seeds on page 15. Mr. Shumway is one of those pioneers who has gained the confidence of seed buyers through more than a quarter of a century of honorable dealing. He expects to round out his career in a manner which will add credit to his name. Buyers should secure a copy of his new free catalog which contains more than 700 illustrations of vegetables and flowers and describes garden and flower seeds in their greatest variety. For copy of the catalog write to the address named.

The manufacturer of the Wilbur stock food has adopted a new plan for popularizing that preparation. He proposes, as announced on page 56, to organize 500 Wilbur Stock and Poultry Tonic clubs. In order to make this organiaztion doubly interesting he presents particulars by which those who take up his plan may participate in a distribution of $500,000. It doesn't cost anything to learn all about this and it may make a little money for you to do it. That is the reason why we urge you to fill out the coupon in the advertisement and forward it to Wilbur Stock Food Company, Dept. C, Milwaukee, Wis.

The old, reliable four-burr Bovee grinder is advertised on page 18. The announcement of this grinder has appeared in the columns of this paper annually for a great number of years and the number of mills bought by farmers runs up into the thousands. As rapidly as the manufacturer found any point that needed strengthening or improving, the change was made, and today it stands as a perfect grinder, not excelled by any other grinding machine made. The Bovee is sold at remarkably low prices, which are quoted in the free illustrated catalog, for which address Bovee Grinder & Furnace Works, 100 Eighth St., Waterloo, Iowa.

Successful farmers now know and appreciate the fact that plowing means more than merely stirring up the soil. It means turning it over, stirring it, disintegrating the clods and leaving the entire depth of the plowing in that condition most suited to the preparation of a seed bed. The illustrations in the advertisement of the Rock Island Plow Company on page 16 show the difference between good plowing and bad plowing and go a long way towards illustrating the point we make. It will be noticed that the correct plan shown in the illustration is that provided by the use of the Rock Island C. T. X. Universal plow. There are a great many reasons for the superiority of the Rock Island. These, however, are described in a new catalog, for which write to Rock Island Plow Company, 138 Second Ave., Rock Island, Ill.

Farm power at low cost is the real cry of the Fuller & Johnson Manufacturing Co. The Fuller & Johnson people have published an illustrated catalog which gives completest information with respect to their double efficiency gasoline engine. It starts out by giving the guarantee furnished to every buyer. This guarantee is liberal and important. It assures every buyer of a Fuller & Johnson double efficiency engine that the engine shall be of first-class materials and workmanship and that it will develop more than its rated horsepower. Every engine will exceed its rating by a good margin. The engine will run properly and do good work if given reasonable care and proper handling. Any part that may be broken within five years will be furnished free of charge on board cars at the factory if the breakage results from faulty material or workmanship and the defective parts are delivered to the company at Madison, Wis. The catalog shows the many uses to which the Fuller & Johnson engine may be put. It goes into the minutest detail in descriptions, showing the simplicity, effectiveness and lasting qualities. The book is really one full of instruction. It may be obtained by writing to Fuller & Johnson Manufacturing Co., 1 Wyatt St., Madison, Wis.

In furnishing copy for their advertisement found on page 42 of this issue, A. Nevins & Son, Modesto, Ill., write: "Our Duroc Jerseys are doing nicely and we think we have a herd that has as much history as some of the leading herds, carrying such lines as Tippy Col., Kant Be Beat, B. & C.'s Col., The Professor, Model Chief, Good E. Nuff Again, King of Cols. and Defender. Our herd boars are Col. Kruger 106107 by Tippy Col., Model Chief I Am 123263 by R. L.'s Model Chief and Defender's Likeness 37135 by Defender."

C. H. Pewsey, Sioux Rapids, Iowa, on page 42 of this issue offers some well-bred Duroc Jersey sows which will farrow pigs by a big boar in March and April. There are some very toppy gilts in the lot worth good money to any buyer, as they are the kind which are profit makers. Many of them are by a big, well-proportioned boar, King Pewsey by Col. Grant 2d. The boar used in service was Cronk's Choice by a Col. sire, dam Lady Critic. Write now for a chance at the best in this herd. Mr. Pewsey will be glad to show you his stock or give you descriptions. Address C. H. Pewsey, Sioux Rapids, Iowa.

Daniel Leonard & Sons, Iowa's pioneer breeders and importers of Shropshire sheep, will hold a public sale of registered Shropshire bred ewes at Corning, Iowa, January 31, 1913. These ewes are bred to imported rams, such as Minton Buttar and Instone rams. The ewes are of the best of quality and are bred up to the standard Shropshire type. Do not fail to attend this sale if you are wanting some good Shropshires that are money-makers. Your price will buy them. Send mail bids to Piper Bros., Corning, Iowa. No postponement on account of weather, as sale will be held in the sale pavilion in Corning. See page 33 for their advertisement.

It may be a little out of season to talk about binders, but the little Cushman engine is always seasonable. It is a light engine, being built for service and with the especial purpose of running the machinery of the binder, thus leaving the pulling of the machine as the only work for the horses. The seasonableness of the Cushman is due to the fact that it may be detached from the binder and used for nearly every possible purpose on the farm requiring power. A free catalog tells all about it. A postal card request will secure this catalo. Address Cushman Motor Works, 2057 St., Lincoln, Neb.

Cranking a gasoline engine is sometimes dangerous and always hard work. It will, therefore, be recognized that an engine supplied with an electric starter has an advantage over one started by the old plan of cranking. The advertisement of the Electric Starting Woodpecker engine on page 12 is important in this connection because the engine advertised is not only a good one from all other points of view, but is supplied with an electric starting device on which absolute dependence may be made. The engine may be procured by any reader of this paper on a thirty days' free trial and with no cash in advance. For special particulars concerning this offer write to the Middletown Machine Company, 1313 First St., Middletown, Ohio.

Dobry's hog conditioner, which is the subject of the advertisement of the John Dobry Manufacturing Company on page 25, is fully described in a little book, neatly printed and published by the advertiser. The book is of particular interest because it not only tells the uses of the conditioner, but presents testimonials from a large number of farmers who have given it a trial and who are loud in their commendations. The Dobry Company also manufacture a steel hog trap which is something out of the ordinary and which enables the farmer to handle a hog of any size with none of the usual disturbances connected with such an operation. For a copy of the book or other information write to John Dobry Manufacturing Cmpany, Cedar Rapids, Iowa.

One of the most interesting picture books that has come to this office is that prepared by the M. M. Johnson Company, Clay Center, Neb. Of course, its object is to describe the famous Old Trusty incubator and brooder, but the object is so snowed under by the extraordinary array of pictures that our readers will certainly be glad that we told them about it. It has something else besides pictures, too. It gives in a mighty entertaining way the history of M. M. Johnson's beginning and progress as a maker of incubators. Several big pages are filled with this story and they, too, contain illustrations of humorous and instructive character. Page after page of pictures appear representing the success of hundreds of different users of the Old Trusty. The book is not an incubator catalog. It is a poultry book. It is a dandy. It doesn't cost a cent. Write for it to M. M. Johnson Co., Clay Center, Neb., and mention this paper. See advertisement on page 26.

NEXT WEEK'S SALE PROGRAM

Monday, January 27	Duroc Jerseys, David Boesiger, Cortland, Neb. Hampshires, A. L. Goodenough, Morrison, Ill.
Tuesday, January 28	Duroc Jerseys, F. Alldritt, Atlantic, Iowa. Hampshires, Mike Sharp & Sons, and R. L. Bollman, Coal Valley, Ill. Duroc Jerseys, A. J. Duerr, Milford, Neb. Poland Chinas, G. F. Marshall & Son, Monroe, Iowa. Short-horns, O. M. Healy, Marshalltown, Iowa. Horses, Breeders' Sale, C. W. Hurt, Mgr., Bloomington, Ill. Duroc Jerseys, Paul Mason and John Brackemyer, Morrison, Ill.
Wednesday, January 29	Poland Chinas, W. M. Wright and Sons, Allen, Neb. Poland Chinas, F. P. Robinson, Maryville, Mo. Duroc Jerseys, E. E. Handley, Carroll, Iowa. Horses, Breeders' Sale, C. W. Hurt, Mgr., Bloomington, Ill.
Thursday, January 30	Poland Chinas, G. A. Kissinger, Milford, Neb. Poland Chinas, E. E. Farver, Ocheyedan, Iowa. Poland Chinas, C. W. Schram, New Castle, Neb. Poland Chinas, O. J. McCullough and L. Saturday, February 1	Poland Chinas, A. J. Podendorf and Frank Rainier, Logan, Iowa. Duroc Jerseys, O. E. Osborn, Weston, Iowa. Poland Chinas, N. B. Freeman, Kearney, Neb. Hampshires, G. H. Dodds, Kenton, Ohio.

Smith's Duroc Sale—Last Call.

On Saturday, January 25th, will occur the Duroc Jersey sale of J. E. Smith, Victor, Iowa. Mr. Smith will sell forty head of high-class sows and they will be as big and smooth as can be found anywhere. Don't forget the date and arrange to attend the sale if interested.

Shaw's Duroc Sale.

A sale of Durocs that should interest all Duroc men in the hog belt is the one that will be made by H. H. Shaw, Hebron, Neb., on February 11th. Mr. Shaw's sale will contain some very noteworthy animals and the offering, on the whole, is better than it was a year ago, at which time he made one of the good sales of Nebraska. Mr. Shaw has bought a new boar since last year. He is Crimson Wonder Chief by Crimson Wonder 3d and out of Lady Chief by the noted Chief To Be. Most of the sows will be bred to this boar and the remainder are bred to Rosebud's Wonder by Welch's Wonder by Col. Wonder and out of the great sow, Rosebud's Pride. A big sow by Lincoln Wonder, the top sow of Geo. Briggs & Son's last year's sale, will be offered at this time. We are of the opinion that she is as good a sow as will be sold this season anywhere. She was the best that we saw sell last year. She has raised a good litter for Mr. Shaw, and while the writer is of the opinion that Mr. Shaw is making a mistake to sell her, yet she should appeal to the buyers. Crimson Wonder Chief was one of the top boars of the Baxter & Comer fall sale and was pronounced by good judges to be one of the good pigs sold last all. Keep the sale in mind and send in your name, that you may get the catalog as soon as out. Mention this paper when you write.

Hereford Females for Sale.

On page 42 B. W. Gregory, Harlan, Iowa, advertises ten head of registered Hereford heifers for sale. These are well bred, as Mr. Gregory is one of the well-known breeders in the state. He is pricing these ten heifers where they will sell. When writing him kindly mention The Homestead.

Choice Hereford Bulls.

The breeder or farmer who wants to buy a choice young Hereford bull should read the advertisement of Ben Broughton, Lake View, Iowa, on page 53 and then see or write him at once. He has some of the best young bulls we know of for sale and these are good enough to head any herd in the West. Write Mr. Broughton about these bulls at once and mention The Homestead.

Foss Offers Choice Duroc Sows.

Theo. Foss, Sterling, Neb., offers for immediate sale a choice lot of Duroc Jersey bred sows. They are the Foss kind, big, growthy, smooth stock. They are sows of good breeding and mostly bred to a choice son of Prince of Cols. Homestead readers in the market for sows will do well to write Mr. Foss and when doing so kindly mention that you saw this notice in The Homestead.

Choice Aberdeen Angus Heifers.

On page 52 will be found the advertisement of Chas. Escher & Son, Botna, Iowa, who are offering a very select lot of yearling heifers that are sired by or are out of imported sires and dams. These are strictly choice and carry the blood close up of some of the most noted Aberdeen Angus sires now living. They are pricing these right if taken soon. When writing the above firm kindly mention The Homestead.

F. A. Stooker's Percherons.

One of the best appointed stock farms and one of the best herds of Red Polled cattle and Percheron horses in eastern Nebraska is owned by F. A. Stooker, Dunbar, Neb. Just now there is being offered from this farm a choice selection of Percherons, including a couple of young stallions and a few mares. Mr. Stooker is the sort of man one likes to do business with, and this stock is first class. Mention The Homestead when you write for prices. See advertisement on page 53.

Wilson Makes Nice Bull Sale.

One of the nice sales of Short-horn bulls that has been made so far in the new year was made a short time ago by Irvin E. Wilson, Belvidere, Neb. In this sale Mr. Wilson disposed of his entire crop of yearling bulls. They went to the Cherry County Cattle Co., owned by A. G. Prey, St. Joseph, Mo. Mr. Wilson maintains a very choice herd of cattle and still has for sale a number of coming yearling bulls and a choice Scotch herd bull. Should you write Mr. Wilson kindly mention The Homestead.

Holbert's Imported Horses.

A. B. Holbert, proprietor of the Greeley Horse Importing Company, Greeley, Iowa, informs us that they have an importation of Percheron, Belgian and Shire stallions and mares arriving in Greeley this week and that another importation is now leaving Europe, and that another lot will be sent later on. Mr. Holbert has gotten out a beautiful lithograph showing his barns and residence and 200 head of stallions and this will be mailed to anyone free of charge who will write him, mentioning The Homestead. See page 53.

Seddon's Great Col. Gano Sale.

One of the greatest offerings of Duroc Jerseys that will be sold this winter will be that of W. H. Seddon, at Persia, Iowa, on January 31st. Here was the original home of that noted sire and breeding boar, Col. Gano, and he still owns a half interest in him and will sell fifteen of the very best sows in this sale bred to him. It will be a great place to buy sows bred to this celebrated boar and you can just take our word for it he has some good ones. Another feature of the Seddon sale is that he has all kinds of size, in fact, he always breeds them big, and he has some of the largest spring gilts we have seen in our inspection of the various herds. Most of the sows not bred to old Col. Gano will be bred to Mr. Seddon's young boar, Model Select, and we think he is about the best Chief Select boar we have ever seen. He has plenty of size and all kinds of finish and he has a head and ear him on him that are hard to beat. One of the outstanding good gilts that he will sell is a daughter of Chief Select and she is bred to Col. Gano for an early litter. He has two of these Chief Select gilts and they are both good and are both bred to Gano. Then he is also listing five very good and very large gilts by old King The Col. and these are bred to the young boar. There will be three splendid gilts by A. F.'s Pilot Wonder and six good Col. Gano gilts in the sale. Then he has two exceptionally large gilts, in fact, these are of the big-type kind, and they are sired by Junior Special, a son of C. H.'s Special. Among the outstanding matured sows in his sale, of course, will be O. R., a line-bred Ohio Chief sow that he bought last year at $280, and she is bred to Col. Gano and has every right to produce him a great litter from this mating. Get a catalog at once and then go to the sale and if you cannot get there in person send

your bid to M. T. White, Homestead representative, in care of Mr. Seddon, and it will be looked after on sale day. See advertisement on page 51.

High-Class Angus Sale.

Isenbarger Bros., Battle Creek, Iowa, will make a public sale of about forty head of Aberdeen Angus cattle on March 12th. These gentlemen have one of the best herds today in the state of Iowa and they can show you a grand lot of high-class individuals. In other words these gentlemen are splendid cattlemen and they have a most excellent herd, composed of Blackbirds, Trojan Ericas, Prides, Heatherblooms and Queen Mothers. They are going to sell a great lot of cattle in their sale on the above date. To be sure of your getting their catalog make it a point to drop them a postal card at once, asking for the same, and kindly mention The Homestead.

Alldritt's Duroc Sale—Last Call.

On January 28th F. Alldritt, Lincoln, Neb., will sell a draft of choice Duroc Jersey sows in the sale barn at Atlantic, Iowa. Mr. Alldritt says that they are the best lot of sows that he has ever offered and we all know that he has sold some good ones. He says that they are the sort he would wish to buy if he were starting in the business, and his years of experience should help some if selecting a new start. These sows will be bred to high-class boars, some of them extra choice ones, and they should make the breeders of western Iowa some hogs that will make money. Try and attend the sale, which will be held in the city of Atlantic, Iowa, on January 28th.

Freeman's Big Poland Sale—Last Call.

Probably nowhere this month will better big-type Poland China breeding be sold than will be offered in the sale that will be made by N. B. Freeman, Kearney, Neb., on February 1st. This sale will be held in a comfortable sale barn and there is excellent train service to and from this point. Sows sired by and sows bred to the great Price Wonder will be offered. Also daughters of Price Wonder, bred to Big Wonder, will go in. Still others are bred to a son of Big Wonder that we think a very valuable big boar. The writer would like to see a good gathering of Poland China breeders at this sale. However, those who cannot attend may send bids to J. C. Price, representing The Homestead. Send bids early and send them in care of Mr. Freeman.

Handley's Large-Type Durocs.

Those of our readers who are going to want some large-type Duroc Jersey brood sows should attend the E. E. Handley sale at Carroll, Iowa, on January 29th. He is selling forty head of yearling and matured sows and spring gilts and these are as large as you will find in any sale this winter. Five of the best tried sows he will sell will be bred to his old champion boar, Frankfort K. Fifteen of the spring gilts will be sired by the old hog and he is also selling daughters of that noted boar, Col. Gano; Golden Model 17th; Ashgrove Col.; Regulus, Chief I Am, and other well-known boars. The sale will be held in his new heated sale pavilion, so no one need hesitate going to his sale on account of the weather. His catalog is now ready and will be mailed on application. Bids send to M. T. White, in care of Mr. Handley, will receive attention on day of sale.

H. H. Reed Has Good Trade.

H. H. Reed, Marengo, Iowa, a breeder of Aberdeen Angus cattle, Shropshire sheep and Poland China hogs, was recently visited by a Homestead representative and we found that the demand for all classes of live stock he handles has been so brisk that he is nearly sold out. He has sold over thirty Angus bulls and females during the past ninety days, only having two bulls eleven months old on hand. These are good ones and are priced worth the money. This demand indicates an increase in values for pure-bred Aberdeen Angus cattle. Mr. Reed disposed of his Shropshire rams that he has been advertising in The Homestead, but will be glad to hear from anyone needing an Aberdeen Angus bull. Mr. Reed is an enterprising young man who has stocked his farm with pure-bred stock and our readers will find him ready to treat them right in all his dealings. See advertisement on page 33.

Podendorf and Rainier's Sow Sale.

For the last time we want to call attention to the Poland China brood sow sale of A. J. Podendorf and Frank Rainier at Logan, Iowa, on February 1st. These two well-known breeders are selling one of the best offerings of sows that ever went through a sale ring at this point. They have cataloged fifty head and the greater number of these are bred to two of the best boars today in the state, Chief Price Again and the great Long Nelson. It would hardly seem necessary for us to dwell on old Chief Price Again, but for fear some might not know about him we will say that he was a winner at the Iowa State Fair and his sons and daughters have been winning ever since. He sired Chief Price Again 2d and the great boar, Mable's Wonder, the former boar a winner at Des Moines and the latter boar a first-prize boar at Lincoln. There are a number of other sons of his that are standing at the head of good herds and they are breeding on. Over half the offering will be bred to these two splendid boars and you will not make any mistake if you buy sows bred to either boar. We have personally inspected both of these offerings and we will say to Homestead readers that they are selling a most excellent lot of brood sows and they are bred to just as good herd boars as you will find today in the West. It behooves every breeder who is going to want bred sows to get a copy of their catalog and be sure to mention this paper when writing for it. Bids sent to C. C. Carlin or M. T. White, in care of either of the above breeders, will be properly looked after on day of sale. See page 46.

Duerr's Crimson Col. Sale—Last Call.

We are calling attention for the last time to the sale of Duroc Jersey bred sows that will be offered by A. J. Duerr, Milford, Neb., on January 28th. This sale will comprise nearly the entire herd owned by Mr. Duerr, as he was a little short on material for the sale and is selling some sows that he would like very much to keep. However, he expects to replace them with ones just as good. A big lot of the sows that sell are bred to Crimson Col., one of the good boars of the state. A few are bred to Critic King, a son of Critic B., the 1912 champion. Do not forget this sale. There will be a lot of high-class hogs and Mr. Duerr is the sort of a breeder to support. He has the hogs and he does business in a mighty obliging way. If you cannot get to the sale send a bid to J. C. Price, the field man for The Homestead, and your wants will be well looked after.

Digester Tankage and Hog Cholera.

There has been considerable discussion at different times regarding the liability of diseased meats creeping into digester tankage, thereby rendering hogs liable to sickness. A representative of this paper recently investigated the matter to some extent. Among others he interviewed F. S. Markey, of Hine Bros. Co., Union Stock Yards, Chicago, who has had a wide experience in the digester tankage business. Mr. Markey said: "I wish to say that our tankage is made from residue of meat scraps of animals that have passed government inspection, which does away with any possibility of diseased meats going into its manufacture. In fact, we are at present getting in our best work in localities where hog cholera is prevalent, as there can be no question that hogs fed on tankage of proper make, such as ours, are conditioned so that they rarely, if ever, are infected with hog cholera."

Last Call for Bollman and Sharp's Big Hampshire Sale.

On Tuesday, January 28, 1913, R. L. Bollman and Mike Sharp & Sons, Coal Valley, Ill., will hold a great public sale of ninety head of select Hampshires. They are the pick of these two noted herds that have won more prizes than any other herds in the land. It seems to the writer that he never saw so many good Hampshire hogs and they say they are not going to show next year, so they have decided to sell the stuff in their sale that they had intended showing next year. Many are aged and yearling sows, while the very best of the gilts have been picked out and bred for this sale. We believe it one of the greatest opportunities ever offered Homestead readers to buy this popular breed of hogs. Trains from Peoria or Rock Island each way on the morning of the sale. Everybody will be taken care of in good shape. For further particulars address either Mike Sharp & Sons or R. L. Bollman, Coal Valley, Ill.

Marshall's Poland China Sale.

G. F. Marshall & Son, Monroe, Iowa, write as follows regarding the sows they will put in their sale January 28th: "We are putting a bunch of sows in this sale of big-type breeding that gives the buyer a chance to get a variety of the best blood known to the breed and the big-type blood lines of most of the well-known herds. There will be yearling gilts weighing from 500 to 600 pounds and the spring gilts are as large for their age. There are no creases or wrinkles on these sows and they have great length and extra heavy bone. People who see the herd say I have more bone than they usually see. Giant King gilts and boars are big and have quality. I have been offered more money for Giant King than any boar I ever owned. It will take $2,000 to buy him, so you see what I think of him. He is one of the biggest, smoothest boars ever produced and could be made to weigh 1,200 pounds in another year. A sow sired by him or bred to him will be a good investment. I have been selling his pigs up to $100 each. Sows sired by Giant King will be bred to a son of Big Jumbo. The sows have had a range of forty acres and have been fed for results. My sows usually farrow from ten to twelve pigs each litter. Two fall boars that are herd headers will be worth a lot of money to the right man. Spend the day with us and see them sell."

Kent Offers Chester White Sows.

Thos. F. Kent, Walnut, Iowa, offers 200 head of Chester White sows and gilts for sale. These will farrow in February, March and April. Mr. Kent, it will be remembered, had the great prize-winning herd out last fall. If you want a few of these sows you will have to get your order in early, as they are going fast. Mention this paper when writing Mr. Kent.

Tower Surface Cultivation.

The Tower surface cultivator has done such good work and for such a great length of time that it has become a watchword with those who appreciate the gains to be made by a scientific surface cultivation. There is no other implement which does such efficient work in dry seasons as the Tower. It has oftentimes been the salvation of a corn crop where other systems of cultivation failed. Additional information and free illustrated book may be had by writing to J. D. Tower & Sons Company, 81st St., Mendota, Ill.

Podendorf's Holstein Sale.

On February 6th A. J. Podendorf, Logan, Iowa, will make a public sale of forty head of registered and high-grade Holstein-Friesian cows and heifers and young bulls. Ten of these cows will be giving milk at time of sale and the remainder will be fresh in February and March. He will also sell ten head of good two-year-old heifers and these will make splendid cows. There will also be a choice lot of good young bulls in the sale. Parties attending the H. C. Glissman sale the day before at Omaha can go directly to Logan, Iowa, for this sale. Write Mr. Podendorf at once for catalog and kindly mention this paper. See advertisement on page 24.

Adding to Dairy Profits.

Every farmer who aims to make every division of his farm work profitable realizes that there are wonderful possibilities for profits in the dairy which a little extra pains in careful labor and a little better equipment in appliances would turn to his advantage. The Home creamery belongs to a class of machinery which cannot fail to prove profitable on any farm. Readers of this paper are urged to obtain complete information with respect to it. They may do so and at the same time they learn much about butter making and cream handling that will aid them in their later work. This is given in a book called "Dairy Dollars." It not only tells how profitable this work is, but at the same time shows how most farms are losing money instead of making it. A copy of this book can be secured free of cost by writing to the Home Creamery Manufacturing Co., Dept. 10, Owatonna, Minn. See page 22.

O. E. Osborn's Last Call.

Those of our Duroc Jersey friends who want to purchase a few good sows cannot do better than attend the O. E. Osborn sale at Weston, Iowa, on February 1st. He will sell forty head, among which will be that splendid Ohio Chief sow, Chief's Last Pansy. She is bred to King Gano, possibly the best son of old Col. Gano that was sold last fall. He is also selling some splendid fall sows and spring gilts that are sired by Osborn's Prince of Cols. and Osborn's Chief Select. Some good Model Critic sows will also be attractions in his sale. A few choice February gilts by Osborn's Prince of Cols. are of the outstanding kind, and would look good in any sale. These are bred to Valley King Again, a grandson of that old grand champion boar, Valley King. Every sow that he is selling will show safe in pig by day of sale, and take our word for it he is selling a lot of useful and well-bred sows in this offering. Some of these might well be termed big-type sows, as they have plenty of size. Another feature of the O. E. Osborn offering is that sows sold in his sale always prove good breeders and they will be in the condition that will do the buyer good. His catalog makes excellent reading for those who are engaged in breeding Duroc Jerseys. Write for it at once and kindly mention The Homestead. M. T. White, Homestead representative, will care for any bids sent in his care on day of sale. See page 49.

Kissinger's Poland China Sale—Last Call.

When making the last call for the Poland China sale that will be held on the Kissinger farm, about six miles northeast of Milford, Neb., on January 30th, we believe that we are calling attention to one of the choicest Poland China offerings to be sold this season. Mr. Kissinger has been breeding Polands for a long time and he has held to a type that is hard to find. They are sure enough big hogs and yet they have a lot of quality and bone. The greater part of the offering is sired by Hillcroft Model and one of the best boars we know of. A part of them are bred to Hillcroft Model and his get are bred to Big Martin, a young boar of much promise. We would like to see a number of the readers of The Homestead at this sale, and we feel certain that they will be well repaid for their trouble. If unable to attend send bids to J. C. Price, in care of Mr. Kissinger. Send bids early and give as wide a range of selection as possible, and your wants will be looked after in a businesslike manner.

Chas. H. Murray's Chester White Sale.

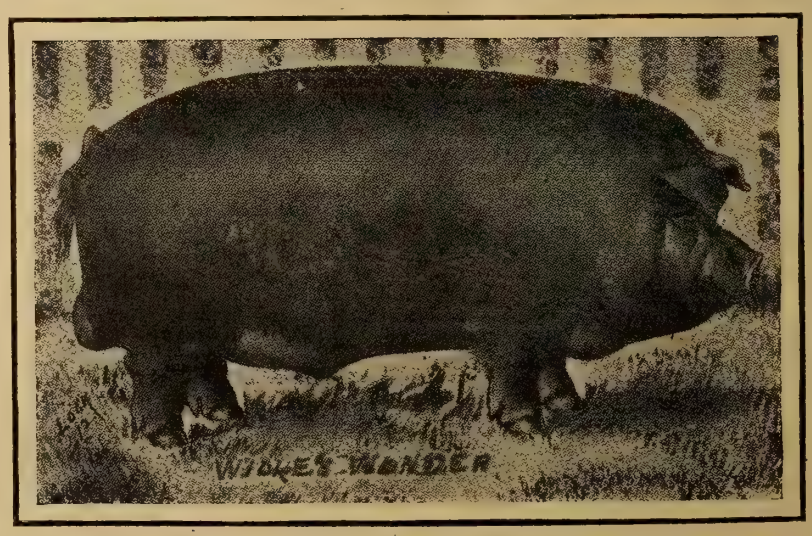
One of the greatest offerings of Chester White bred sows to be offered this season will be put up by Chas. H. Murray, Friend, Neb., on February 7th. This is one of the great herds of Chester Whites of the country and this offering will contain much of the very best of the herd. They were all immuned early in the fall and are in excellent shape at the present time. They should be safe stuff to put in one's herd and they are certainly worthy of good homes, judged from either the standpoint of breeding or individuality. The writer would like to see a good turnout of breeders at this sale. We are certain the efforts of Mr. Murray are worthy of support, and we feel that all who attend will find they have spent the time very profitably. Those unable to attend and wishing a choice bred sow should send bids to J. C. Price, the field man for this paper, and they will be well treated. Hogs will be bought for these men well worth the money and careful selections will be made. Address all communications to Chas. H. Murray, Friend, Neb., and mention this paper when you write. See page 39.

An Excellent Poland China Offering.

The engraving which appears on page 37 shows a few of the fall yearling Poland China sows to be sold by Carl Rosenfeld at his public sale at Kelley, Iowa, February 3d. There are twenty-four of these and they are so nearly alike that it would take an expert indeed to select one which was much better than the others. As noted in our last issue, the consignment which Mr. Rosenfeld has selected is a remarkably good one. We have not space to go into details in the blood lines, but it is of interest to all buyers to know that the strains represented are those which have been the basis of the very best results in big-type breeding, and in this case the animals are a credit to their breeding. There are also a few mature and tried sows cataloged for this sale. One of these is Susie's Giantess, a September yearling that has an excellent gilt in the sale. This sow is a daughter of Mastodon, he being by King Mastodon and out of Lady Mastodon 95th by A Wonder. The latter is the hog which has made the great reputation of Mr. Fesenmeyer, Clarinda, Iowa. The dam is Daisy's Giant by P. W. Giant. This is a remarkably good sow and one which will prove a great investment at almost any price for which she may be sold. There are a number of others equally good and, in fact, the entire consignment is such as to be worthy of the investigation of good breeders. For catalogs write to Carl Rosenfeld, Kelley, Iowa.

D. K. O'Day's Big Duroc and Flue Stock Sale, February 4th.

A sale that should interest Homestead readers is that of D. K. O'Day, Burnside, Ill. Seventy choice Durocs will be offered, including the herd boars, Oliver the Great 131455 by Superba 31403, dam Lucy Wonder 139th by Crimson Wonder III., and Winser Boy by Wonder Boy, dam Red Wave by Col. Freed. One of the attractions of the sale is a Volunteer gilt out of Helen's Duchess that sold in the Browning sale recently for $675. She is bred to the great champion of 1912, Prince Educator 100679, on December 11, 1912. This will perhaps be the only sow sold bred this way in the West this winter. Others of good breeding are offered. Seventeen head of high-class draft and road horses will be offered, including draft mares weighing 1,600 pounds, due to foal early. Matched gelding and fancy drivers broke double and single will be offered. Also nine head of high-class Hereford cattle, including herd bull; fancy poultry, chickens, ducks, geese and turkeys; seventy-five bushels selected Reid's Yellow Dent seed corn, twenty-five bushels Boone County White, etc. The sale will be held at the farm near Burnside, Ill. Trains will be met at Burnside on T. P. & W. R. R., these being due from Keokuk at 7:45 a. m. and from Peoria and the east at 11:27 a. m. Trains on the C., B. & Q. arrive at Adrian from Burlington at 8:00 a. m., from Quincy at 9:45 a. m. Parties coming on Wabash railroad will be met at Ferris, Ill. H. E. Browning will represent The Homestead. Bids by mail or wire should be sent to him in care of Mr. O'Day at Burnside, Ill. Cols. Fred Reppert, J. W. Story and C. L. Greer, auctioneers.



The above is a likeness of the well-known boar, Widle's Wonder, at the head of the Plainview herd of Durocs owned by David Boesiger, Cortland, Neb. This was the first-prize boar at the Nebraska State Fair, 1912. Many sows bred to him go in the sale made by Mr. Boesiger on January 27th.

Look up the advertisement on page 51 of this issue and for further information address D. K. O'Day, Burnside, Ill.

Closing-Out Shetland Pony Herd.

With this issue o The Homestead, Spivey Robb & Co., University Place, Neb., are starting an advertisement in which they offer their entire stud of Shetland ponies at prices that should sell them quickly. These gentlemen have been breeding ponies for many years, and the herd is one that is well known for the excellence of the ponies produced there. Readers of this paper who are interested should address as above for full information and when writing kindly mention The Homestead. See advertisement on page 42.

Oltmanns Bros.' New Importation.

An importation of Percheron and Belgian stallions has just landed at the barns of Oltmanns Bros., Watseka, Ill., and this reliable firm is in good shape to care for the wants of the buying public. The horses are all good young ages, the low-down, good-boned, well-made kind, selected from the best studs in Belgium and France by the senior member of the firm, who resides at Leer, Germany, and is consequently in close touch with the horse-producing interests of Europe and possesses exceptional buying advantages. This is one of the old established importing firms and they can be depended upon to make good every statement. Buyers will make no mistake by inspecting their horses and will get satisfactory treatment in every way. See page 55.

Trees at Half Price.

Mr. Earl Ferris, proprietor of the Earl Ferris Nursery, Hampton, Iowa, has an interesting offer on page 14 of this week's issue. Mr. Ferris delivers trees direct from the nursery row to the farm at a price he claims is just about one-half what is paid for nursery stock when it is bought of a traveling agent. Although he only specializes on evergreens, he handles Delicious, Wealthy and other apple trees, as well as choice varieties of plums, strawberries and other fruit. Mr. Ferris' evergreen offer is especially attractive. He sends 100 transplanted, root-pruned evergreens for $7.50, express prepaid. This is a remarkable offer that he has been making for three years, during which time hundreds of farmers of Iowa and adjacent states have taken advantage of it.

Boesiger's Duroc Sale—Last Call.

The last call for the David Boesiger sale means the last call to the opportunity to buy a choice Duroc sow bred to the prize-winning boar, Widle's Wonder. It will be the last chance to buy first hand this season. Widle's Wonder made a great showing at Lincoln last fall and he has a right to sire good stuff. He was the highest-priced boar sold at auction in Nebraska last season and the competition was made by men who are conservative breeders. Mr. Boesiger has a great lot of stuff for this sale, they are descended from good foundation material and mated with Widle's Wonder they should prove absolutely right. A few sows are bred to Lincoln Lad, a son of Lincoln Wonder. Lincoln Wonder is generally regarded as one of the very best sow sires of the breed and Lincoln Lad is not far behind his sire. If unable to attend this sale send a bid on some of the good sows to J. C. Price, field man for this paper, at this sale. Send bids early that they may reach Mr. Boesiger in plenty of time.

DeKalb's Hampshire Sale.

On March 12th, H. D. DeKalb, Dekalb, Iowa, will make a public sale at Council Bluffs, Iowa, of sixty head of the best Hampshire sows that have ever been listed for a sale in the West. It will be remembered that Mr. DeKalb made a sale a couple of months ago at the same place and that proved the best sale ever made in the West up to that time. In fact, it was such a success that Mr. DeKalb is going back again with sixty sows that for breeding and individual merit cannot be excelled. The DeKalb herd is one of the oldest in the state of Iowa and the West, and many of the most noted prize winners have been descendants of sires and dams bred and used by Mr. DeKalb. In his forthcoming sale he expects to surprise the breeders with an offering such as has never before been listed for a western sale. Many of these sows will be bred to DeKalb's King 15th, a young boar bred by himself and now in service in his herd. Without question this is the best young Hampshire boar we have ever got our eye on and we have seen some boars in our time. He is a son of Mr. DeKalb's old boar, Major, that in turn was a son of that celebrated boar, Stone's Duke, he by old General Munson. It will be remembered that Stone's Duke was out of Madam Aylor, the noted grand champion sow at all of the leading state fairs and also at the World's Fair at St. Louis. The dam of this young boar is Jennie Aylor's Best and she was a daughter of old Major, and he therefore carries a double cross of Stone's Duke and Madam Aylor. A student of Hampshire breeding will find that this young boar carries more of the blood of old Stone's Duke than any boar now living. He is an outstanding good one, has an ideal Hampshire herd and a good eye, a splendid back and spring of rib, good length and depth of body, well filled in the hams and has more quality than any Hampshire boar we have ever looked at. After looking him all over you will say he has fewer holes in him than any boar you have ever looked at. There will be fifteen sows in the sale bred to him. Those of our readers who are interested in Hampshire hogs can secure a copy of the DeKalb catalog if they will only write their name and address on a postal card and send it to Mr. DeKalb and mention this paper.

The Missouri Auction School.

The January term of the Missouri Auction School is on with eighty-five students enrolled, and on February 3d the next term will commence. Colonel Carpenter desires to have all who are interested and contemplate taking a term know that they may enroll any time during the January term and finish with the February class, thus securing the advantage of extra training during the last of the January term. The actual practice sales conducted in the auction house conducted by Colonel Carpenter and in the city horse market gives students ample practice selling all kinds of merchandise and live stock. The instructors, who have proven so proficient in this line of work, are retained and the working organization is such that students who attend the Missouri Auction School receive instruction that is of untold value to them in their chosen profession. Colonel Carpenter will gladly mail you his latest catalog on receipt of your request for same, mentioning this paper. Note page 46 for advertisement.

Standard Poland China Record Association Meeting.

The annual meeting of the stockholders of the Standard Poland China Record Association was held at the live stock pavilion at South St. Joseph, Mo., Wednesday, January 8th. A banquet was tendered those in attendance by the Live Stock Exchange at the Transit House the evening preceding the meeting. F. P. Robinson, Maryville, Mo., was elected president for the ensuing year and the old vice-presidents from the various states were re-elected. The new directors are H. L. Faulkner, Jamesport, Mo.; W. O. Garrett, Maryville, Mo.; B. F. Gilmore, Sheridan, Mo.; John W. Lawson, Clarinda, Iowa; T. J. Meisner, Sabetha, Kan., and J. R. Roberts, of Oklahoma. It was decided to hold the next annual meeting at Maryville, Mo., and a vote of thanks was tendered the Live Stock Exchange for the favors shown the association at the various meetings held at St. Joseph. The members of the Live Stock Exchange were also tendered an invitation to attend the meeting at Maryville next year when a banquet will be given in their honor.

Pedley's Prize Clydesdales.

Jas. Pedley, Britt, Iowa, makes an announcement on page 42 of this issue which will be of much interest to Clydesdale fanciers. He is offering for sale a full brother to the stallion, Forest King, that has made such a grand record at the Iowa State Fair the last few years. There are some excellent judges who pronounce King Robert, a grandson of Baron's Pride, a better horse tha nhis brother, Forest King. One of the nicest things in the Clydesdale line is a yearling stallion colt sired by Forest King, out of a good brood mare that is also for sale. He is a very big colt, will develop more size than his sire and will be just as good, and has everything in his favor. The mare is a fine sort of a brood mare, a producer of the right sort as shown by her stud colt, and is priced right. Write Mr. Pedley and ask him about these horses. He will give you an honest description and a square deal. Address James Pedley, Britt, Iowa.

J. O. James' Big Oranges.

One of the best offerings of Poland China bred sows that J. O. James has ever sold at public auction will be ready for his coming sale at Braddyville, Iowa, on February 7th. Those who want daughters of that noted old boar, Big Orange, will find them in this sale in good and plenty. In other words there will be eighteen head of outstanding good spring gilts and three very choice fall sows by Big Orange in this sale, and many of these will be bred to his well-known boar, Big Sensation. Here is a cross that should make good, as it is a commingling of blood lines that has made good. About ten sows in his offering will be bred to Big Orange, and these are his very best brood sows. Then he has a lot of sows that are bred to his great yearling boar, Ott's Big Orange, and these will be good propositions to buy. Many of the Big Orange gilts in this sale will weigh 400 pounds or over by sale time, so you will know they are good. Among the many good Big Orange gilts in his sale are Nos. 1 and 2 that are litter sisters to the Story and Walker boars that sold in his fall sales for $225 and $200 last fall. These are outstanding good gilts and should bring good money. There are quite a few others that are about as good. The breeder who buys sows bred to Ott's Big Orange or Big Sensation will get good bargains, because these boars are growing stronger in the minds of the best breeders every day. There will be a wide variety of breeding in his sale this year, such as daughters of Long King, Pawnee Nelson, Big Sensation and other good boars. He is offering a combination of Big Orange-Pawnee Lad-Giantess-Longfellow King blood lines that have been the standard among big-type breeders for several years. It is a good offering from beginning to end. Write Mr. James for his catalog at once and mention The Homestead. M. T. White will represent The Homestead at this sale and will care for any bids sent in his care. See advertisement on page 48.

Westerhoff's Poland China Sale.

On Tuesday, February 4, 1913, Henry Westerhoff, Wynot, Neb., sells forty head of Poland China bred sows at his farm on the edge of town. The sale will be held off a little from the time usually set to allow anyone who might wish to come in on the Omaha from the East to be in good time for the early part of the offering. Mr. Westerhoff has in his herd a boar he calls A Wonder, but he is of a slightly different line of breeding than the other boars of this name. He is by Sunny Slope Chief, out of a Remington sow, Lady Wonder 6th. The boar has been a good breeder, producing considerable size, in smooth packages. The gilts by him are grown out to about 300 to 325 pounds, possibly more in a few instances, and being bred to the young boar, Big Longfellow by Dorr's Expansion, out of a daughter of A Wonder 107353 are the kind of hogs the farmers are looking for and that breeders are buying to supply the farmer trade. The spring gilts are by A Wonder 60397, Long King, Hadley's Mogul by Hadley's Surprise, Mastiff's Pointer by King Mastiff, and are bred to the Dorr's Expansion boar above noted. The entire offering is worthy and can be recommended to people looking for good stock without expecting grand champion prospects, but practical hogs to make money on the farm. Write for catalogs, mentioning The Homestead. Address John Westerhoff, Wynot, Neb. See page 40.

Smith & Son's Sow Sale.

One of the very best offerings of Poland China bred sows to be held this winter will be the one presented by Albert Smith & Son, Superior, Neb., Tuesday, February 4th. A splendid lot of big, roomy, growthy spring gilts, thirty-eight in number, in additon to five fall gilts and two tried sows, will constitute the offering. The gilts, a remarkably growthy bunch of March farrow, are by such well-known sires as Big Sam by Sampson, Big Quality by Blue Valley Quality, Smith's Big Hadley, Jumbo Jr. and Victor Prospect and are bred to Jumbo Jr. by Nebraska Jumbo; Victor Prospect, a son of the noted Big Victor, and Mogul's Monarch by Mogul. Two tried sows, Queen's Victoria, a litter sister to Lonergan's Big Victor, and White Ear by Chief of Pawnee 2d by Chief of Pawnee will be offered as special attractions. Both have proven themselves among the best producers in this herd. In addition to the hogs five spring Short-horn calves, four heifers and one bull will be sold. The latter, a great prospect, is by Cedar Hill Pride and out of Orchard Lady and the heifers are by General and Cedar Hill Pride. If you have not received a catalog send for one at once and arrange to attend the sale. The sale will take place on the farm, nine miles northeast of Superior and two miles southeast of Cadams. If unable to attend the sale bids sent to John C. Halderman, who will represent this paper, sent in care of these breeders, will be carefully looked after. See page 43 and in writing mention this paper.

Young Breeders of Short-horns Have Good Chance at Oxley's.

Once in a while a breeder of live stock who has no wide acquaintance will sell either at public auction or by private sale a bunch of stock which deserves real attention on the part of buyers from a distance. Oscar Oxley, Corwith, Iowa, on January 31st sells about twenty-five head of Short-horns which we would advise young breeders looking for chances to buy pure-bred cattle of this breed which will pay their way, to look over. They are all in calf to a great Scotch bull, Corwith Goods by Carter's Choice Goods, and include some of the good families of the breed, as Seraphina, Young Phyllis, Elizabeth and Victoria. There are cows right in their prime as producers and some young calves which are worth buying for future disposal. There are two especially good roan bull calves by the Corwith Goods bull, he out of an imported Brawith Bud cow, Imp. Golden Wreath 12th, that most any breeder could take and make money on when they are grown out for service. They are both July calves, out of a cow, Rose Seraphina, and her daughter. This sale offering, though small, should attract the attention of young breeders who want moderate-priced starting stock. The whole herd is strong in milking strains, and has been built up on the "pay for itself" plan by Mr. Oxley, who is moving to Minnesota to a newly purchased farm and will be unable to take care of so many head of cows there. It must be borne in mind that the bull, Corwith Goods, a pretty roan, is a real good type of Scotch breeding and the young stock in the herd show him to be the right sort of a breeder. Write for a catalog of this sale, mentioning The Homestead. Sale is at farm, four miles southeast of town. Address Oscar Oxley, Corwith, Iowa. Address Oscar Oxley, Corwith, Iowa. See advertisement on page 49.

Gilsaman's Holstein-Friesian Sale.

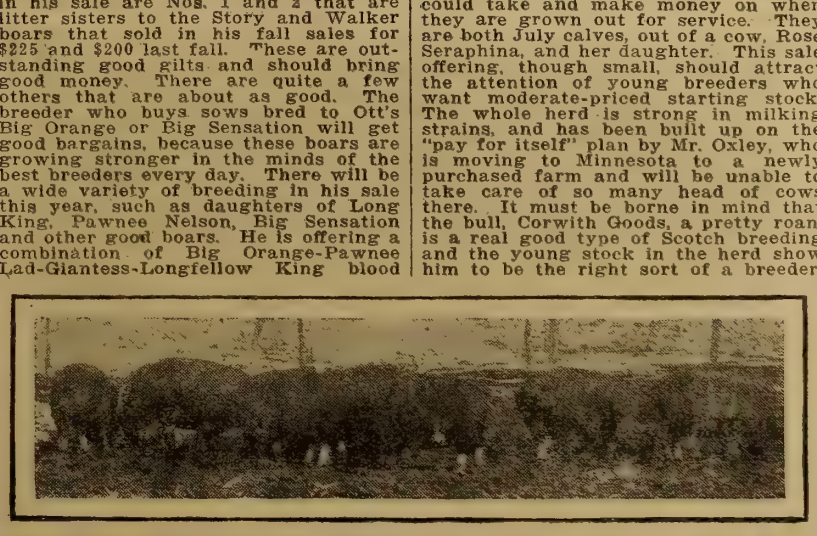
One of the greatest strings of Holstein-Friesian cattle that has ever been offered here in the West will be the dissolution sale of H. C. Gilsaman, at South Omaha, Neb., on Tuesday and Wednesday, February 4th and 5th. The senior member of this celebrated Rock Brook herd is retiring from the firm and this dissolution sale. They are selling 125 head, eighty of which are registered cattle and the remainder will be high-grade Holstein-Friesian milk cows and heifers. There will be forty head of registered cows and heifers whose breeding and individual merit is all that could be desired. There are a number of cows in this offering with A. R. O. records, and some of them with records of 1,700 pounds of milk in a single year. Most of these cows are milking or will soon be fresh, and besides these there will be twenty choice two-year-old heifers. These females will all be bred to sons of either King Segis, King of the Pontiacs or De Kol's 2d's Butter Boy 3d, three of the greatest bulls of the breed. There will be ten bulls in the sale that are sired by the most noted sires of the breed, and are out of dams with A. R. O. records. There will be forty-five head of high-grade Holstein-Friesian cows and heifers in this sale, many of them sired by noted bulls, and these are strictly right for those farmers or dairymen who are looking for good milking cows. Never before in the West have so many or so good an offering of Holstein-Friesian cattle been listed for a sale here in the West. The catalog is now ready for distribution and will only be sent on application and provided you mention this paper when writing for it. See page 50.

Deierling & Otto's Mammoth Jacks and Jennets.

Deierling & Otto, Queen City, Mo., have in their barns in town and on their farms near Queen City a greater string of Mammoth jacks and jennets than they have ever owned before. These gentlemen have always been interested in the Mammoth jack, either as breeders of jacks and jennets or high-class mules, hence they know the kind that make good, siring superior stock. In 1912 these gentlemen made the strongest shows and their stock won a great string of prizes. At the Missouri State Fair, the strongest show of the year, the following prizes were won: First on jack four years old and over, fourth on jack three years and under four, first on jack two years old and under three, first on jack one year and under two, first on weanling jack colt, second on aged jennet and second on jennet under one year old. At the Illinois State Fair they won every first prize but one on jacks, had champion jack, won second prize on aged jennet and second prize on aged herd. The prize-winning jacks are, with the exception of one, for sale and our readers looking for jacks standing from fifteen to sixteen hands high, with plenty of bone, substance, quality, head and ears should not fail to see these. On Mr. Deierlings farm is found the greatest load of big mules the writer ever saw and as they are largely the product of jacks these gentlemen have bred or owned the visitor will see that they are breeding and handling the kind that sire market-topping mules. Deierling & Otto want you to come and see their stock. Queen City is on the Des Moines, St. Louis line of the Wabash. Note page 42 for their advertisement and when writing or visiting these gentlemen kindly mention having seen their advertisement in this paper.

Schram's Excellent Poland China Offering.

C. W. Schram, New Castle, Neb., whose sale of big Poland Chinas occurs next week, January 30th, has an offering of a lot of worth, both in blood lines and the type of hogs that will be sold. He has planned carefully the method of mating he has wished to use and then has bought individuals that have pleased him for breeding purposes. As a result his herd is big, but has quality as well, making it an ideal foundation for a profitable pork producing herd. There are several sows in this sale that for symmetry throughout, smoothness, size and bone are worthy a place among the leaders of the breed, and they all come from sows that have been producers on this farm. We would like to call especial attention to the two sows, Arabelle and Mollie Fair, both by Fair Chief, a son of the famous Chief Price 2d, out of Fair Maid 2d, and out of sows by Expansion Prince. This combination of blood has certainly proved a winner and the sows bred to Hadley's Mogul, a boar by Hadley's Surprise, are prospects for placing right blood lines that stand for plenty of size at an early age in herds where this is a prime object. These sows need not be passed up because of a fear of lack of bone or stretch, for they are both "there" with these points. A two-year-old sow, rather a common looker just now, but a big one and built well for pork production, is Lady Wonder by Fair Chief, dam by A Wonder 107353—the Fesenmeyer boar, Villisca Belle, also one of the matured sows by Young Look by Young Tecumseh, dam Nodaway Belle, is the kind most people would keep in their herds, but Mr. Schram is keeping some other good ones and can let her go. There are gilts by Hadley's Mogul that have made good size, and though they have not reached their complete development, they have been kept going steadily to give room for development by their future owners. They are big now, even in width and wide, too. There are also a number of spring gilts by Mastiff's Pointer.



SOME CHOICE POLAND CHINA SOWS. SEE FIELD NOTE OF CARL ROSENFELD, KELLEY, IOWA, ON PAGE 36.

a great son of the champion, King Mastiff. These gilts are much the same in type as the Hadley Mogul gilts. Write in for catalogs of the sale and if wanting to buy real toppy stock from a herd not yet well known, but which will be if the past methods are followed, come to the sale on January 30th. Address, mentioning The Homestead, C. W. Schram, New Castle, Neb. See page 46.

Cooper's Poland China Sale.

The work of W. H. Cooper, Hedrick, Iowa, is an excellent example of what a man with little resources can accomplish with energy. A few years ago Mr. Cooper was working on a farm by the month, but he saved his money and started in the breeding of pure-bred Poland Chinas. What it has done for him is known by most Poland China breeders. Today he has a beautiful modern farm home and the best equipped hog farm in the state. This has been accomplished by good work, good judgment and applying the golden rule when dealing with his customers. On February 4th Mr. Cooper will hol his annual sale of bred sows and this year he has the best offering he has yet been able to put up. Twenty-five head of great yearling and two-year-old tried sows will be sold and a few fall yearling sows. The balance of the offering will be gilts that are large, long, heavy boned and many of them will weigh 400 pounds sale day. The very best blood lines of the breed are contained in the pedigrees in Mr. Cooper's catalog. Mr. Cooper has never lost sight of the value of a herd boar and the boars these sows are bred to are the best Mr. Cooper could obtain regardless of price. If you want a good, big Poland China sow bred to a good boar write Mr. Cooper for a catalog, mentioning The Homestead, and arrange to attend the sale. See advertisement on page 50.

Maasdam & Wheeler Sell Percherons.

Maasdam & Wheeler, Fairfield, Iowa, well-known breeders, importers and exhibitors of Percheron horses, have recently sold to C. L. Anceney and H. W. Child, of Montana, probably the best two-year-old Percheron stallion imported this year, together with several of the best Percheron mares they had. This young stallion was pronounced by good judges to be one of the best and largest two years old imported this year and was being held in reserve for next year's shows by Maasdam & Wheeler. In this stallion Messrs. Anceney and Child secured the best individuality and breeding that could be obtained, but both of these gentlemen are excellent judges of live stock and knew what they wanted. They had visited the International Stock Show looking for a stallion, but finally decided that this colt was the one they wanted. The mares they secured are one of the best bunches that ever left the Mississippi valley. They also purchased through Maasdam & Wheeler fifty Short-horn cattle from Iowa breeders and in these they secured excellent individuals combined with good breeding. Montana is to be complimented on having such enterprising gentlemen within the borders of the state. It is such men as these who build up the live stock industry in any country. Maasdam & Wheeler have an exceptional lot of two, three and four-year-old imported stallions weighing a ton and imported and home-bred mares of all ages that they will price worth the money. Visitors are always welcome. Write them for any information you want, mentioning The Homestead. See page 55.

Swan & Ellis' Sow Sale.

On February 8th, Swan & Ellis, Indianola, Iowa, will make their first annual public sale of forty head of Duroc Jersey brood sows, and while this is their initial appearance in the public sale ring, they nevertheless are listing a splendid lot of sows for the occasion. One of the chief attractions in their sale will be the boar that now stands at the head of their herd. This is I Am A Crimson Wonder II., a well-known prize-winning boar himself and the sire of prize winners. This hog is a son of I Am A Crimson Wonder, one of the most sensational young boars that was ever shown at the Iowa and the Nebraska State Fairs. This was the great son of Crimson Wonder Again that John Morrison paid Will Sells $500 for, and he in turn was out of that celebrated brood sow, H. A.'s Queen. After a long search for a boar Swan & Ellis bought this hog of Mr. McDuff, who in turn bought him at the Beem dispersion sale. He was a second-prize winner at Lincoln and Hutchinson and was also a first-prize winner and champion boar at the Interstate Fair. He sired the first-prize and junior champion pig at Lincoln in 1911 and a number of others that were winners then and since. He is a splendid individual himself and, best of all, he is a great breeding boar and these gentlemen are selling thirty-four head of sows in this sale bred to him. The best sows they are offering will be bred to this boar. Among these are four splendid daughters of the old champion boar, Crimson Wonder Again, and some of these are just as good brood sows as you will see in any sale this winter. There will also be a daughter of the great boar, Superba; Valley Chief; L. E.'s Col.; Wonder Chief; Freed's Col., and Ohio Col. Besides these there will be two splendid gilts by Col. Gano that are simply choice and have plenty of size. Two others that will not be overlooked in their sale will be daughters of Muncie Prince and these have all kinds of size and quality. In next week's issue we will individualize on the several choice sows they will sell in this sale. In the meantime remember to get a copy of their catalog and when asking for it kindly mention The Homestead. Bids sent to M. T. White, in their care, will be attended to on day of sale. See page 41.

Skillen's Duroc Sale.

R. M. Skillen, Greene, Iowa, a well-known breeder of Duroc Jerseys, will hold a sale of forty bred sows on February 10th at his farm. Mr. Skillen has been breeding Durocs for many years and has constantly worked an improvement in this herd. Chuck's Model is a son of Model Chief that Mr. Skillen has been using in the herd for two years and he is siring a great lot of stuff. There will be eleven fall yearling sows in the sale by Chuck's Model and they are a fine lot of sows, all being bred to Prince of Wonders, a son of Crimson Wonder Again, and this cross should result in some excellent litters. There will be one two-year-old sow by the Ohio champion, Kelly's Pilot Wonder; three by Waveland Ohio Chief by Ohio Chief, and twenty-five spring gilts sired by Select Goods, Merfield's Wonder, Waveland Ohio Chief and Chuck's Model. There is a litter of five gilts by Select Goods, he by Chief Select and out of a dam by Tippy Col., that are worthy of mention. A number of the gilts are bred to Skillen's Col. Gano, a full brother to R. J. Harding's noted prize-winning sire, Col. Gano, and the balance of the offering will be bred to Chuck's Model and Advancer Chief by Model Advance. Mr. Skillen's offering will look very good sale day to the man who wants high-class Durocs and we urge all interested to write for catalog at once, mentioning The Homestead. Send bids to Carlos C. Palmer, representing The Homestead. See advertisement on page 49.

Robinson's Greatest Sale of Mammoth Poland Chinas.

The sale of mammoth Poland China bred sows and gilts which F. P. Robinson, Maryville, Mo., will hold on Wednesday, January 29th, at Maryville, is one of the opportunities of the year to get hogs with size and quality that are so bred that they will produce their kind. Fifty head of tried sows and gilts, two tried herd boars and twenty fall of 1912 pigs are listed. Mr. Robinson has never sold any but such as in his judgment will make good and his guarantee in the catalog of this sale is so broad that the buyer runs only the risk of accident or death. Mr. Robinson's great herd boar, Pawnee Pete, conceded to be one of the greatest of the hogs that actually have weighed over 1,000 pounds, is well represented in the sale. His dam, Miss Corwin, a number of his daughters and granddaughters are listed and bred to boars that Mr. Robinson has such confidence in that he uses them on his reserve brood sows. Prince Ito, the boar Mr. Robinson says is the best boar he ever owned, is also represented by a few head. This boar was lost while being fitted last summer. He weighed better than 1,000 pounds, was a great sire of sows and those in this sale should be appreciated. His brother, Prince Tom, is well represented in the offering and they are the same kind. Mr. Robinson thinks so much of the get of Prince Tom that he is keeping a number of his daughters and several sows bred to him. Prince Tom will be included in the sale, as Mr. Robinson has so much of this blood in his reserve herd. He will make good in most any herd needing a good breeding boar that will get size and quality. Pete's Best, a full brother to the great Pawnee Pete, but two years younger, is also listed. He would not be sold but old Pete will not be fitted again and is just in his prime as a sire. Mr. Robinson is reducing his herd of brood sows and many that would not be priced under other conditions are selling. He is listing twenty-one head of these yearling and two-year-old sows, three fall yearling gilts and twenty-six head of as good big spring gilts as will go in a sale this year. These sows and gilts are bred to Pawnee Pete, Prince Tom, spotted King, a son of Long King's Equal, and Lady Jumbo 3d, Fred Jamison by Pawnee Pete, Tom's Model, a Prince Tom boar reserved for show, and Monticello Boy by Big Expansion. This latter boar was first-prize boar pig in under six months class at Missouri State Fair last year and third at Iowa. Mr. Robinson thinks he is the pig to use on Prince Tom and Pawnee Pete gilts and many are bred to him. Mr. Robinson is desirous of sending his catalog to all who are interested and will write for same. His herd boars are illustrated and the breeding will be seen to be strictly first class. Note page 49 for the advertisement and when writing Mr. Robinson kindly mention this paper.

WM. RETZLAFF'S
ANNUAL SALE

DUROC JERSEY BREDSOWS

Will be held on the farm 4 miles southeast WALTON, NEBRASKA,

Tuesday, February 4th

THIRTY head of choice sows will be listed and they are every one of the sort that we would retain for our own use. We are selling sows that we would much rather keep, but we are selling close to make up the sale offering. Some of the very best that is in the herd will go in this sale. Some daughters of Crimson Critic, as choice sows as will be sold this winter are listed. Others are by Sensation Again by Wallace's Wonder, Col. Stoner by King of Cols., Queen's Crimson by C. W. Again, Lincoln Wonder by Ohio Chief and a few others. They are bred to Sensation Again, Gold Col., Col. Willetta 2d and Crimson Advancer. Try to arrange to be with us sale day. Walton is eight miles east of Lincoln and on Mo. Pac. Also free transportation from Bennet on the Burlington. J. C. Price is the field man. Col. W. J. Thompson, auctioneer. Address for catalog

WM. RETZLAFF, Bennet, Nebraska.

Larson's Large-Type Durocs.

The Duroc breeder who is wanting to buy some big-type sows will find some that will strike his fancy in the O. S. Larson sale at Logan, Iowa, on January 30th. He is one of the breeders who has been getting all kinds of size in his herd of late years and his offerings always make the boys sit up and take notice. Mr. Larson is certainly putting up an attractive offering this time, as he is selling twenty-five of his very best sows bred to that noted boar, King The Col. You might say that Mr. Larson made his reputation on this King The Col. breeding, as he got them so big that everybody wanted them. He sold the old boar, but after Col. Gano came into the limelight he went back and bought the old hog back. While, of course, Col. Gano is the best thing that King The Col. ever sired, yet he has sired other good ones that were so far above the general average that everybody is now wanting sows bred to him. We cannot do our friends a better service than to urge them to attend the Larson sale and buy sows bred to this noted sire. He has a lot of good ones listed, among which is a daughter of the grand champion boar, B. & C.'s Col., two choice gilts by Chief Select and two by old Advancer, and these are all bred to King The Col. He is selling two splendid fall sows that are full sisters to Col. Gano and one Col. Gano gilt bred to King The Col. He is selling four daughters of King The Col. in the sale and these are practically full sisters in blood to Col. Gano. Besides these there will be daughters of Proud Col., Golden Model 11th and other well-known sires. The place for you to buy sows this year bred to King The Col., the sire of the great Col. Gano, will be in the O. S. Larson sale. Bids sent to M. T. White, Homestead representative, in care of Mr. Larson, will be looked after on day of sale. See page 52.

One of the herd boars that sells in the D. K. O'Day sale, February 4, 1913. See advertisement on page 51 of this issue.

Algona Sale of Poland Chinas.

A sale of Poland Chinas at Algona, Iowa, by J. M. Glasier, of that place, at the Kossuth County Fair Grounds, is an attraction for Wednesday, February 5th. Mr. Glasier has been gathering together in a quiet way a really first-class herd, and is offering a draft from it to the appreciation of breeders looking for quality goods in this breed. His gilts will have more than the average size at the sale and there are some sows in the catalog which are good property to look for. Breeders will find lots of good things here and the quiet way Mr. Glasier has built up his herd means an advantage to buyers in this season when high-class brood sows will be needed so badly. Heading this herd lately has been Big Kossuth, a big boar by Ellerbroek's A Wonder, out of Mollie B. 2d, out of Mollie B. by Chief Leader dam, old Mollie Fair. A number of the spring gilts are by him and out of some sows that won't be bettered much in most of the sales this year. There are one or two brood sows and yearlings in the sale which are equal to the better offerings in any herd. A few are by Up To Date Jr. by old Up To Date, dam Our King, representing the good breeding of W. J. Crow. No. 12 in this catalog is by Longfellow Type, a boar which was produced by mating the big, lengthy Longfellow blood on some sows that carried lots of quality on a big carcass, and his daughters, among which is the fall yearling, No. 12, are good, big brood sow prospects which can be recommended to the most discriminating. This No. 12 is exceptionally good all through. No. 1 in the catalog is a big, roomy sow which is herself an unusually typey sow, but is in addition the dam of a yearling by the great Colosso, which is quite a good prospect. This yearling has two gilts in the sale which for big bone, good feet and size with quality are mighty worthy pigs. They will be bred to Valley Longfellow by Chief Longfellow, dam Valley Wonder by

Blue Valley Boy, a young boar with length and which promises to grow into one of the big ones. He has a very big bone and is exceptionally good on his feet. The other service boar is Count Halvar Jr. by Count Halvar 2d by Big Halvar, a representative in every line of accepted big breeding. His blood lines show the product of the Gritters and Mouw herds in each generation. It will pay breeders to see this offering, and if that is not possible C. C. Carlin, Homestead representative, will take good care of any orders you may send him. Address for catalog, mentioning The Homestead, J. M. Glasier, Algona, Iowa. See advertisement on page 46.

Galbraith & Son's Clydesdales.

Alex. Galbraith & Son, DeKalb, Ill., the old established importers and breeders of Clydesdale horses, call attention in their advertisement on page 40 to the fact that their present lot of horses is unsurpassed by any competitor for quality, action, size, substance, style or fashionable breeding. That tells a big story. For several decades the name of Galbraith has been connected with the draft horse industry of the United States and particularly with the interests of the Clydesdale horse. The senior member of the firm of A. Galbraith & Son is a native of Scotland, with the inherent love of a good horse that has made the representatives of that country so big a factor in the live stock world wherever they are found. Other draft breeds have had the benefit of Mr. Galbraith's aid and experience, but his largest efforts have been put forth for the sturdy Scotch drafter, and as a consequence the high place that the Clydesdale today occupies in the estimation of the American farmer is due in no small measure to the work of Mr. Galbraith and the high-class horses that he has imported to this country. A keen and discriminating judge, a gentleman of the strictest probity, he has earned the respect and confidence of the buying public, has been the means of placing a very large number of high-class sires on American farms, and has been a potent factor in the draft horse world. The stables of this firm are well filled at this time with a class of stallions that should appeal to discrimnating buyers. They are the right sort and among them are several prize winners, including an International champion. That Galbraith & Son handle the right sort of horses has been demonstrated times without number in the show rings of this country, where they have demonstrated their superiority in the hottest kind of competition. Any reader of The Homestead in the market for a representative Clydesdale horse will make no mistake by inspecting what Galbraith & Son have to offer. Not only will the horses be found right, but the men behind them are right and can be depended upon to give the buyer satisfactory treatment.

Davis' Closing-Out Sale of Durocs.

E. W. Davis, Glenwood, Mo., for several years has been a prominent figure in Duroc Jersey circles and breeders generally will regret to hear of his decision to disperse his excellent herd. Mr. Davis has served in the capacity of an advertising solicitor for the Duroc Bulletin during the past year and finds that he cannot give his herd proper attention and for this reason has decided to sell everything at public auction on February 7th. A number of celebrities will be sold, including the grand champion boar, Ohio Col.; the noted show and breeding sow, Model Queen; Chief's Maid, the grand champion sow of Iowa in 1912; Ohio Queen by Ohio Chief, and many other valuable animals. Ohio Colonel is sired by King of Colonels and out of a High Chief dam. He was grand champion of Kansas in 1910 and is recognized as a great sire of high-class Durocs. Any breeder in need of a herd boar should consider well before he passes up this opportunity, as such boars are very seldom offered for sale, either at public or private treaty. Model Queen was grand champion of Nebraska and Kansas in 1910 and sold for $750 to Mr. Davis, which is the highest price paid for a sow during the year 1911. She has proven a valuable brood sow, raising two litters each year, and a number of her daughters sired by Proud Colonel will sell. Model Queen 10th, Model Queen 15th and Model Queen 20th are three fall yearling daughters of the noted Model Queen that were winners at the Iowa, Nebraska and Kansas State Fairs this year. This litter won third in produce of sow, fourth in young herd, fourth in young herd bred by exhibitor and fifth in the get of sire class at the Iowa State Fair. These sows, as well as Model Queen, are bred to Successor, an extra good yearling boar by Advancer No. 1 and out of Mill Hope, a litter sister to the dam of Model Queen. Successor also sells in the sale and he is a good prospect for someone wanting a herd boar. Chief's Maid not only won the grand championship at Iowa this year, but was second at Des Moines and Lincoln in 1911. She is a daughter of Valley Chief and has raised a fall litter by Ohio Colonel and is rebred to him for a middle of March litter. Ohio Queen also raised a fall litter and will farrow March 15th to the service of Ohio Colonel. This sow was third in class at the Iowa and Nebraska State Fairs in 1912 and fourth at Nebraska in 1911. Model Queen also raised a fall litter and the litters from these three sows will sell in the sale. Owing to the fact that these valuable sows have raised fall litters, they will be in much better condition to do good for the purchasers than they would be were they carrying excess flesh. Model Queen 6th is a great daughter of the noted Model Chief and out of an Advancer sow. She is bred to Ohio Colonel for March 15th litter. Keep this sale in mind and see the next issue of this paper for further particulars. The catalog can be had by writing Mr. Davis, mentioning this paper. Bids sent to Carlos C. Palmer, in care of Mr. Davis, will be carefully handled. See page 43 for advertisement.

CHAS. H. MURRAY'S GREAT SALE OF 40 CHESTER WHITE BRED SOWS

WILL BE SOLD AT FARM 3½ MILES SOUTH OF

FRIEND, NEBRASKA, FRIDAY, FEBRUARY 7, 1913

Choice breeding sows, show material of high order and good blood lines will be offered. It will pay you to attend this sale, at any rate be represented.

J. C. Price is the field man. Send bids to him.

Sows and gilts by such sires as Plainview Choice, O. K. Winner, U. S. and others, and mostly bred to U. S. and Fairmont Chief make up the sale.

Mention The Homestead. Address for catalog

Col. W. J. Thompson, Auctioneer.

CHAS. H. MURRAY, FRIEND, NEBRASKA

Retzlaff's Duroc Jersey Sale.

The writer recently called on Wm. Retzlaff, Bennett, Neb., and spent some little time in looking over the sows that will make up the sale of Duroc Jerseys that will be sold by this gentleman on February 4th. The sale will be held at the farm, four miles southeast of Walton, Neb.; six miles southwest of Eagle, Neb., and seven miles north of Bennet, Neb. It is one of the real good lots of sows that will be sold this season that we saw on our recent visit to this place. They are all fashionably bred stuff and they are nicely grown and conditioned. Probably as good gilts as we have seen is the litter sired by Crimson Critic and out of a daughter of Golden Model 5th. Crimson Critic was sired by I Am A Crimson Wonder 2d, the boar now owned by Swan & Ellis, Indianola, Ia., and he was out of the great breeding sow, Royal Blossom 6th, out of the champion, Royal Blossom 5th. Crimson Critic is sure some breeding boar and these gilts are the kind to tie to. Some other extra choice ones are sired by Sensation Again by Wallace's Wonder and out of Sensation Girl by Chief Sensation. Sensation Again is a big, smooth boar and a breeder of merit. We believe he is one of the good breeding boars of the West. The sale offering is largely bred to Sensation Again and to Crimson Advancer, a son of Advancer 5th and out of a Crimson Wonder sow. He is a splendid young boar, in fact, one of the good ones sold in the Beem sale last August. One mighty choice Lincoln Wonder sow will go in the sale and another choice sow is by Belle's Prince by Red Wonder and his dam was Clay Center Belle. These sows are both bred to Sensation Again. Breeders generally will find that it will pay them to attend this sale. Mr. Retzlaff has a good herd and is a lot of support to the Duroc Jersey business in the West. If unable to attend send a bid on some of the choice ones. Send same to J. C. Price, in care of Mr. Retzlaff, and careful selections will be made for you. Mention The Homestead when you send for the catalog. See page 38.

Harding's Great Col. Gano Sale.

On February 3d, R. J. Harding, Macedonia, Iowa, will make his annual public sale of forty head of Duroc Jersey brood sows in the sale pavilion at Carson, Iowa, and he has one of the splendid offerings of the winter season. One of the great attractions of his sale is the fact that he is selling seventeen head of his very best sows bred to that sensational of all great boars, Col. Gano. Just a word at this time regarding Col. Gano. He stands today one of the greatest boars of the breed and this was conceded by most of the more noted breeders who attended the fairs last fall. When it comes to a boar of the size of Col. Gano, and one that has the quality, the bone and the feet and legs that he has under him, we will just say you will travel several days and over several states and we doubt whether you will find him then. Among the splendid attractions in his sale will be Base Moss Duchess 4th, a daughter of old Ohio Chief, and she is also a full sister to Henry Matern's great boar, The Professor. She is bred to Col. Gano for March farrow and should be one of the best propositions in the sale. He is selling four daughters of Chief's Protection, litter mates, and these were all in his second-prize young herd at the Nebraska State Fair in 1912. He also offers his fifth-prize senior yearling at Des Moines last fall and all five of these are bred to Col. Gano for March farrow. Another good sow he is selling is H. A.'s Queen Again, a fall yearling by the champion boar, Crimson Wonder Again, and out of Will Sells' celebrated old broow sow, H. A.'s Queen. She is also bred for March farrow to Col. Gano. One more good sow is a junior yearling sired by Ira Jackson's noted boar, Orion Chief, and she is also bred to Col. Gano for March litter. He is selling twenty fall yearlings, most of which are sired by Chief's Protection. Ten good matured sows and ten gilts make up his offering and fifteen of these are bred to his splendid young boar, R. J.'s Wonder, the boar that topped the Sells sale at Indianola last fall. He is also selling three good junior yearlings by Freed's Col. and two of these are bred to Col. Gano. These were in his second-prize show herd at Nebraska last fall. A few sows go into the sale bred to Chief's Protection and some of the breeders do not want to overlook these, as this old boar has sired some of the best sows Bob Harding has ever raised. Write for the Harding catalog and please mention The Homestead. Bids sent to M. T. White, representing this paper, in care of Mr. Harding, will be handled with care on day of sale. See advertisement on page 47.

Frank Roberts' Poland China Sale.

At Earlham, Iowa, on January 31st, Frank Roberts will make a public sale of forty head of well-bred Poland China sows, bred along the big-type lines, and he is selling some very choice things in his sale. Ten of these are matured sows and six of these will have litters at side by Pawnee Wonder, his splendid son of old A Wonder. In last week's issue we made extended mention of this boar, as he is one of the outstanding good sons of Fesenmeyer's old A Wonder. Mr. Roberts is selling a number of good Pawnee Wonder gilts and these will all be bred to his new boar, Giant Jones, a good son of Big Jones 3d and Wigstone's noted show sow, Hunt's Giantess. The sows he will sell in this sale are bred in the blood of some of the most noted big-type boars used here in the West. He is selling a splendid daughter of Will Shrader's noted breeding boar, Choice Look, and another good sow that is out of a Choice Look dam. He is selling three good daughters of Expansion Jumbo in Long Mollie, Miss Cora and Rosebud, and these will all have litters at side by Pawnee Wonder. There will be three good gilts in the sale by Pawnee Wonder and out of Miss Cora, and these are all bred to Giant Jones. Besides these he will also sell some good gilts by King Wonder, Victor Hadley and other boars. One of the best King Wonder sows is out of Beauty Jumbo, a daughter of Prospect Jumbo, and she is bred to Giant Jones. The farmer or breeder who wants to buy some good sows with litters, or sows bred for early farrow will find some splendid bargains in Frank Roberts' sale. He will also sell a span of five-year-old Shire bred mares in this sale that are strictly choice, and the man who wants a really choice pair of mares should make it a point to attend the sale. He will also sell twenty head of three-year-old fat steers that will weigh 1,300 to 1,400 pounds and they are strictly choice. His catalog will tell you all about them. Write for it at once and kindly mention The Homestead. See page 49.

Barr & Son's Poland China Sale.

On February 4th, at Red Oak, Iowa, those veteran breeders of Poland Chinas, W. H. Barr & Son, will sell forty head of cracking good Poland China sows, and it is an offering that we can recommend to our Homestead readers. At the same time they will sell five bulls, three of which are Polled Durhams and the other two are Shorthorns, and it will be a good place to buy a bull as well as Poland China brood sows. The senior Mr. Barr is one of the oldest and most reliable breeders in the West. We might say he is one of the old originals who in early days helped breed the bristles off and he has been improving them ever since. In their announcement they say: "On February 4, 1913, we will offer forty head of the best sows and gilts that will pass through a sale ring anywhere this winter. They are all of strictly big-type breeding and we wish to impress this fact, and if you will attend this sale we will prove to you beyond a doubt that our herd boars, B.'s Mastodon 59131 and Pawnee Sensation 61473, are breeding a class of hogs that will commend themselves to the buying public. Some of the get of these two boars are bred to the good son of Big Orange called Orange Longfellow, and rightly named, but it isn't all in the boar. We believe that to obtain the best results it is necessary to have high-class sows as well. You can have a board good at one end, but if poor at the other end it won't make a good fence. To obtain best results in breeding we want boars of high merit and require the same in sows, and the forty odd years that the senior member of this firm has spent in breeding Poland China hogs has proven to him that no man has a cinch on the breeding business and that honesty and integrity bring their reward as the years go by and beat trying to catch another sucker every year. You will observe that the major part of the offering is by that prince of sires, B.'s Mastodon 59131, and to those who have never seen him would say he is a 750-pound, two-year-old boar—back, legs and feet, head and ear as near faultless as any you will find, extra body depth and as good ham as you will see on any hog. The Mastodon sows are bred to Pawnee Sensation 61473 and Orange Longfellow. The Sensation gilts are all bred to B.'s Mastodon 58131 and these Pawnee Sensation gilts are a stronger endorsement as to his breeding qualities than anything I could say. So we say to you, attend this sale and we extend to you a cordial invitation, whether you buy or not." Remember their sale will be held at Red Oak, Ia., but when writing for catalog kindly address them at Villisca, Iowa. Please mention The Homestead when writing for it.

Allen's Crimson Wonder Again Sale.

On February 5th, at Chariton, Iowa, H. S. Allen will again make his annual public sale of forty head of high-class Duroc Jersey brood sows, and he again has a splendid offering. He is selling twelve good tried sows, ten fall yearlings and twenty choice gilts. He is selling twelve sows that are bred to his celebrated old grand champion boar, Crimson Wonder Again, and every one a good one. There will be eight daughters of old Crimson Wonder Again in the sale and some of these have been prize winners in his herd. There will be twenty granddaughters and great granddaughters of old Ohio Chief in the sale and there will be more of the blood of Ohio Chief and Crimson Wonder Again in this offering than has ever before been listed for one sale. He is selling twenty sows that are bred to Model Chief 8th and he has been regarded as one of the best breeding boars in western Iowa. Among his best tried sows are the following: Pleasant Hill Lady by Crimson Wonder Again, bred to Model Chief 8th; Lady Defender by the grand champion boar, Defender, bred to Crimson Wonder Again; two good Valley Chief sows bred to Crimson Wonder Again; a splendid daughter of Ohio Chief Again, out of a dam by Proud Advance, and a cracking good sow goes in bred to C. W. A.; Rosey S. by Pride's Chief, bred to C. W. A.; Missouri Lady by Valley Chief and out of old Missouri Girl, a half-sister to H. A.'s Queen, goes in bred to C. W. A.; one yearling by Chief Select, bred to C. W. A.; a good sow by High Col., bred to C. W. A.; two spring gilts by Proud Col., bred to the old boar, as well as several others. Six sows sired by Crimson Wonder Again will be bred to Model Chief 8th. Among these is the first-prize senior yearling at Des Moines in 1912 and a mighty good sow she is. She is out of a Valley Chief dam and her litter will be line bred; one good Chief Select spring gilt bred to Model Chief 8th; five cracking good spring gilts by Crimson Chief Again and bred to Model Chief 8th, and a good tried sow by Valley King 2d, bred to Crimson Chief Again. There are other good things, almost too numerous to mention, in his sale, but the catalog will tell you what they are and all about them. Just a word here about old Crimson Wonder Again. It is one of the last opportunities breeders will ever get to buy sows bred to this noted breeding boar. The old hog, a champion himself, is also the sire of over 100 prize winners, a record that has seldom if ever been equaled by any boar, living or dead. The champion boar at the Illinois State Fair in 1912 was out of a Crimson Wonder Again sow and the grand champion boar at the Idaho State Fair in 1912 was a son of Crimson Wonder Again. He also sired the grand champion boar at the Idaho State Fair in 1911, with 250 head in competition. The junior champion sow at the Iowa State Fair in 1912 was a daughter of his, also the first-prize senior sow. He also sired the first-prize get of sire at the Nebraska State Fair in 1912 and others that we could mention in every leading show throughout the West. His sons and his daughters seem to breed on and have been siring show winners in the strongest classes, so you had better make up your mind to buy some of this blood. Henry Allen always sells a splendid lot of sows and he has them again in this sale. Write for his catalog at once and kindly mention The Homestead. Bids sent to M. T. White, representing this paper, in care of Mr. Allen, will be cared for on day of sale. When writing for catalog address Mr. Allen

at Russell, Iowa, but remember that his sale will be held at Chariton, Iowa. See advertisement on page 48.

Waltemeyer Bros.' Duroc Sale.

The record of Waltemeyer Bros., Melbourne, Iowa, in the show rings of the Iowa, Nebraska, Minnesota and South Dakota State Fairs and the Sioux City fair on their Duroc Jerseys stands almost unparalleled. It is easy enough for a man with ample capital to buy the best animals of any breed and, by having a good feeder, to go out and win at the big shows, but the man or firm who can breed a herd that can go out and pull down the big ribbons at the big shows is the man who deserves the honor of being called a constructive breeder. Of course, a prominent sire will play an important part in any herd, and this is true in the herd referred to above. The great herd boar, Golden Model 2d, has undoubtedly sired more winners at the fairs mentioned above during the last four years than any boar, living or dead. We are inclined to believe the average breeder does not fully realize the value of a great sire. The great work that Golden Model 2d has done in this herd is surely a great object lesson to anyone who has followed the shows. On February 11th Waltemeyer Bros. will sell a grand bunch of sows at public auction. About twenty of these sows will be bred to Golden Model 2d and the man who is wise will buy one of them. However, breeders do not want to lose signt of the sows bred to High Model, grand champion of Iowa, 1912; Golden Model 31st, grand champion at Sioux City, 1912, and Sensation Wonder, the great under-year boar now used in the herd. See page 52 and write for catalog, mentioning The Homestead.

Last Call for Farver's Sale of Poland Chinas.

Breeders who attend E. E. Farver's Poland China sale at Ocheyedan, Iowa, on January 30th, will get to see one of the very best big-type boars in the breed. With all Farver's Goliath's great size he has not that extreme coarseness that so often characterizes the immensely big boars of this breed. He is simply an enlarged edition of the smaller, more compact boar of past Poland China history, and has the prepotency which puts all this size in his offspring. A considerable proportion of the sows in this sale are either bred to him or are sired by him. We believe in him absolutely and are confident that breeders who look him over sale day will pronounce him one of the

greatest of big-type boars. He has gilts to be sold January 30th that will now (January 15th) weigh close to 375 pounds and they all bear his stamp, that same good proportion, big bone and good feet, and these bred to the young boar, E.'s Defender, a prospect for the premier honors his sire, Big Defender, sold by Henry Dorr recently at a big figure to E. C. Caverly, of Illinois, will make very desirable additions to any herd of big-type Poland Chinas. It is too bad that more breeders have not seen Farver's Goliath, for then the excellence of his stock together with the knowledge of the recent accomplishments of Big Defender would tell them that this sale has the best sort of prospects for them. Nos. 1, 2 and 3 and a few others in the first part of the catalog are tried sows which are equal to the best. No. 1, Lady Surprise, is a very stretchy sow, weighs at 600 pounds right now, is by Crow's Big Surprise and being bred to Farver's Goliath is worthy of being placed No. 1 in any catalog. She has a yearling sow and two gilts in the sale. They will convince anyone of her breeding powers. No. 3, Lady Tecumseh, is a big-type sow with a record of producing good individuals back of her, and bred to G.'s Defender. She is wide of back, full and deep in the ham, stands up well, and marked very well. Some of the very best pigs in the last spring's crop were out of her. Those who saw Farver's spring pigs know what this means. An attraction in the sale is No. 10, Long King Beauty, a wonderfully wide, deep, low-set sow with more than usual big bone, bred to Farver's Goliath. She has big breeding throughout and shows it. As stated before in these notes, the gilts will some of them weigh 375 pounds right now, and will crowd 400 pounds sale day without being too fat. There are some gilts from a Thuirer sow, by Thuirer's Big Orange, one especially which is very stretchy and smooth. What looks best are the Goliath gilts out of Lady Tecumseh, Miss Expansion and Dina Prize. They are bred to E.'s Defender. This young boar was considered by his breeder and by many who saw him to be the best pig Big Defender sired last year. He has had a hard season's work and shows it, but there is lots of boar there now. He has the come out of a wonderfully big, long boar and will make a very worthy successor to Goliath when that time comes. It should be remembered that weights in the catalog were taken December 24th. The entire offering is strictly first class and deserves attention from the best breeders. The sale will be held at the farm, a mile east of town in a comfortable place. Ray L. Gribben, of The Homestead, will attend the sale and look after your interests honorably. For catalogs address E. E. Farver, Ocheyedan, Iowa. See advertisement on page 49.

Stevens' Duroc Jersey Sale.

O. R. Stevens, Rippey, Iowa, announces a public sale of Duroc Jersey sows for February 6th. His advertisement appears on this page. Prominent in this sale will be the sow, Lucy Perfection, a half-sister to Big Wonder and seventh-prize junior yearling sow at the Iowa State Fair in 1911. Another good one will be Lady Advance by old Proud Advance and bred to Cedar Hill Chief. The combination of blood is one of much promise and one which breeders will profit by recognizing. Eight gilts are by Harding's Col. Gano, all outstanding ones. There will be gilts by Liberty Chief, Col. Chief, White's Proud Advance and Choice Goods. A fine attraction is a sow by Liberty Chief, out of O. R.'s Fine Sow. The latter was the top sow at Mr. Stevens' last winter sale and later sold at the Tupper sale for $280. Amy Gano is one of the outstanding sows of the sale. She is bred to Big Wonder for an early March litter. She is a full sister to the sow that topped the Harding sale last winter and was herself the top of the Seddon sale. These sows will have been bred to Big Wonder or Cedar Hill Chief. Big Wonder is by I Am Perfection Wonder and is looked upon as a hog of promise. He was fourth in the junior yearling class last fall and since that has gained so much in size and quality that much is looked for from him another year. Cedar Hill Chief is a line-bred Ohio Chief, being a son of Liberty Chief, probably the largest Ohio Chief boar living. Cedar Hill Chief stood next to Col. Gano at last year's show. He will be fitted for next year and has a good deal of promise. For catalogs giving additional details write to O. R. Stevens, Rippey, Iowa.

W. M. Wright's Mammoth Poland Chinas.

We give this week the last notice preceding the sale of Mammoth Poland China brood sows by W. M. Wright & Sons, of Allen, Neb. The senior member of this firm is a hustler and has shown it both in the way he goes after the stock that suits him when he wants it for breeding purposes and also in the way he cares for the hogs when he raises them on his own place. He has followed a very definite ideal in establishing this herd, and as a result has firmly fixed the size he advertises as the product of his breeding operations. Those who visit him now will find a lot of spring gilts with bone and size, and will find them bred to a good sort of boars. The leading characteristics of the whole herd are stated in his catalog announcement, where the aim in establishing the herd is stated to be for "large hogs with plenty of bone and quality as well, so as to get the most desirable hog for the farmer." That this has been accomplished is supported by the fact that the farmers in the neighborhood of Allen who have bought from Mr. Wright are pleased and looking for stock of the same kind. He has produced a farmer's hog, something which should be the aim of every breeder. No one ought to leave the farmer out of his consideration in his breeding, for they are the rocks upon which to build always. If it were not for their desire to breed and feed better breeding hogs the business would very quickly degenerate into a "fancy" stock proposition to be made a plaything instead of a practical thing as it is now. Mr. Wright's hogs are not of the plaything variety, as they can be turned into good money by the man who buys them. Heading this herd are boars that are big, that have lots of bone and have bred well where they have had a chance to prove themselves. The best of these is probably the old herd boar, Wright's Big Bone by the sire of great size, Big Bone, dam one of the famous Maid B. sows, Maid B. 4th. He has put a good bone on his sows and gilts and with it size and smoothness. They look hardy and fit for use anywhere. In mating them Big Bone Jim and Big Wonder have been used. Big Bone Jim is by the great breeding boar, Lyon Chief, that has put so much excellence into E. S. Barker's herd in his offspring. The young boar has inherited his sire's quality of reproducing well, and the gilts by him in the herd stand high as individuals. Big Wonder is by the old boar, Long Wonder 2d, is a rangy boar and comes from a prolific family. There are gilts in this sale representing not only Mr. Wright's best breeding, but the best lines of other herds of well-known, big-type breeders. It is an offering which deserves the presence of good breeders and hog raisers looking to raise the standard of their market stuff. Write for catalogs now and mention The Homestead please. Ray L. Gribben, of The Homestead, will attend the sale and will look after bids sent him in careful and honorable fashion. Address W. M. Wright & Sons, Allen, Neb. See advertisement on page 46.

Droz-Hanks & Bishop Duroc Sale.

An important sale of Duroc Jersey bred sows will take place at Fairfield, Iowa, February 6th. J. C. Droz, of that place, and Hanks & Bishop, New London, Iowa, will join forces in making this sale and we want to say that they have a great lot of sows cataloged. Mr. Droz is selling thirty head, twenty-nine of which are bred to his great herd boar, Cherry Chief. Cherry Chief is the sire of Cherry King, Chief Select, The Chief's Col. and many other noted boars that are recognized as the leading sires of the breed. It will be a great propositon for any breeder who gets a sow bred to Cherry Chief. There will be nine fall gilts by Proud Col. and eight yearling sows sired by The Professor, Golden Model 2d, Jack's Friend, Proud Col., Chief Protection, Col. Defender and Chief Select. The gilts are sired by Proud Col., Crimson Wonder I Am, Model Wonder and Advancer. Mr. Droz is cataloging thirty of the best sows he owns and the fall yearling sows by Proud Col. have extra size and should prove great brood sows, especially when mated to Cherry Chief. The three sons of Cherry Chief above mentioned were out of Col. sows and for this reason we expect excellent results from the Col.-bred sows that are mated to this noted boar. Hanks & Bishop are selling twenty-five head, nearly all of which are gilts. This firm has made a record at the Iowa and Nebraska State Fairs on Durocs of their own breeding and we want to say when it comes to a standpoint of breeding along constructive lines this firm has few superiors. A large part of their winnings have been made on the get of their noted old sire, Model Wonder, he a son of Crimson Wonder I Am. Model Wonder sires the smooth, large kind and we want to say that he has very few equals as a sire of great brood sows. There will be ten gilts in their offering bred to Model Wonder and nine bred to Wonder Model, a son of Model Wonder that won second in the junior yearling class at the Iowa State Fair this year. There will be six sows bred to the noted sire, Proud Col. As to the sows they are selling, there will be one good Model Chief sow, one fall sow by Instructor, four good gilts by Model Wonder and one of them is extra good; four by Proud Col.; four by Proud Ohio Chief; one by the International champion, Highland King, and ten by Col. O., he by Proud Col. and out of an Ohio Chief 2d dam. A sow bred to any of the three boars Hanks & Bishop will be using will be a valuable addition to any herd. This is a high-class offering all the way through and every Duroc breeder should write to either consigner for a catalog, mentioning The Homestead. Carlos C. Palmer will represent The Homestead at this sale. See page 49.

Cherokee Lad 9029, champion of the state fair circuits, 1912. Many of the sows in the Bollman & Sharp sale at Coal Valley, Ill., January 28th, will be bred to this sire. See field notes.

Sale of Prolific Duroc Jersey Sows at J. Schmidt's.

J. Schmidt, Everly, Ia., on Friday, Feb. 7, 1913, winds up a circuit of four exceptionally strong sales of Duroc Jersey sows on his farm six miles north of Everly. The sale held on Friday will enable anyone who attends to be home that week, and no one ought to pass it up on any account. Mr. Schmidt is not extensively known among Duroc Jersey breeders, but he has a herd that ought to be known well. It is deserving of a wider acquaintance. The heading of this note indicates one of the best features of the herd, which will be admitted when the fact that out of the big bunch of pigs farrowed last spring Mr. Schmidt raised 225 head. One of the greatest practical problems in hog raising is to secure strains which are prolific, as the heaviest producers are always the biggest profit makers. As certain a way as any to get started right in this direction is to secure your start from a herd where this characteristic predominates. Then in addition to the fact that Mr. Schmidt was successful in raising such a large number of pigs there is the fact that it made a much larger number to select his sale stuff from. That he is very conscientious in this practice of selecting the very best to go out from his place is proven by the method he followed last fall with his boars. The writer was on this farm during the height of the boar season last fall and saw several barrows from the spring crop of male pigs which would have been very good boars for a great deal of the trade, the kind that are sold from many a herd for good prices. They did not suit their breeder,

GALBRAITH'S CLYDESDALES

are as familiar as a household word. Present stock unsurpassed by any competitors for quality, action, size, substance, style or fashionable breeding. Prices very moderate.

ALEX GALBRAITH & SON, DE KALB, ILLINOIS

By far the oldest and largest Clydesdale importers in the United States and the only firm in the West owning an International champion.

STEVENS' DUROC JERSEY SALE

TO BE HELD IN TOWN AT

RIPPEY, IOWA, THURSDAY, FEB. 6th

ON the above date I will sell a fine lot of Duroc Jersey sows. Among these are Lucy Perfection (a half sister to Big Wonder), Lady Advance (by Proud Advance), eight gilts by Col. Gano and other gilts by Col. Chief. Liberty Chief, White's Proud Advance, Choice Goods, etc. There will be as a special attraction a sow by Liberty Chief and out of O. R.'s fine sow, the sow that topped the Stevens sale last winter and later sold at the Tupper sale for $280. These sows will have been bred to Big Wonder or Cedar Hill Chief. Write for catalog giving full details.

O. R. STEVENS, RIPPEY, IOWA.

WESTERHOFF'S POLAND CHINA SOW SALE

Wynot, Neb., Tuesday, February 4th

40 HEAD, consisting of 23 fall gilts and 17 of spring farrow. Sired by A Wonder 60397 by Sunny Slope Chief—Puzzle, sire of the Henry Bros.' prize winners at Sioux City. Spring gilts by A Wonder 60397, Long King, Hadley's Mogul and Mastiff's Pointer. Mostly bred to Big Longfellow, a great boar by Dorr's Expansion, dam by the Fesenmeyer A Wonder. A first-class offering, from an absolutely disease-free herd and neighborhood. Col. Z. M. Baird, auctioneer. Sale at farm in town.

HENRY WESTERHOFF, Wynot, Neb.

PUBLIC SALE OF SHORT-HORNS

at farm 4 miles southeast of

CORWITH, IOWA, FRIDAY, JAN. 31ST

20 HEAD Scotch-topped Seraphinas, Young Phyllises, Victorias, Elizabeths, etc. A practical herd of the dual-purpose sort. Cannot take care of all my herd on my newly purchased farm in another state. This is an appeal especially to young breeders wanting stock that will pay their way and prove profitable breeders. Cows bred to Corwith Goods, a son of Carter's Choice Goods and his young stuff in the sale show him to be a good producer. He is out of Imp. Golden Wreath 12th, a cow now owned by Professor Curtiss. Write for catalog, mentioning The Homestead. Address

OSCAR OXLEY, CORWITH, IOWA

however, and he retired them rather than send them away. From the big crop of spring gilts only about twenty-five or thirty head will be sold, a rigid selection that means pleased customers among the buyers. About two-thirds of the spring gilts are sired by Col. Tientsin by King of Cols. by Carl's Col., dam Lady Tientsin by Tientsin II. Col. Tientsin is a big boar, symmetrically developed, on good feet and legs, and breeds a nice class of sows. The younger herd boar, Royal Muncie by Muncie Chief, dam Royal Blossom by American Royal, is the sire of the yearlings in the sale. The yearlings are a stretchy sort, they have well-arched, broad backs and are full hammed. They will be safe in pig to Col.'s Model, a big, smooth fall boar from Grant Lynn's herd. This is the same good boar Mr. Lynn had at Des Moines this year and has developed well in Mr. Schmidt's hands. His sire was Col. Grant by W. L. A.'s Choice Goods, his dam the best brood sow in the Spirit Lake herd, Dallas Queen. She is the dam of Evergreen Prince, the premier herd boar at the farm of Grant Lynn. We can recommend these sows as healthy beyond question, and from breeding strains. There are many things in favor of the entire offering which will be sold in a comfortable pavilion, and believe that the pigs will be appreciated by any visitor at the sale. Send for catalogs, mentioning The Homestead, and your request will receive prompt attention. Ray L. Gribben will give honorable attention to mail bids sent him. Address J. Schmidt, Everly, Iowa. See advertisement on page 45.

Fesenmeyer's A Wonders—Last Call.

Of all the wonders, the great Poland China boar, A Wonder, stands in the front rank of all the noted big-type boars of the breed now living, and the sale of Henry Fesenmeyer, at Clarinda, Iowa, on February 6th, will therefore be one of the decided attractions of the year. Among the forty head that he will sell on the above date, ten are daughters of old A Wonder or carry the blood of A Wonder strongly in their make-up. Further than this, and the important factor in his sale is the number, thirty head in all, that will be bred to this sensational boar. The remainder will be bred to his great young boar, Big Joe. We gave a detailed list of the various sows he will sell in last week's issue and this week we will quote from his announcement: "In this offering of bred sows I am selling eight tried sows, the ones that I have been selling their pigs at $40 and $50 each at weaning time. Also two fall yearlings. Balance are spring gilts. The breeding of this offering is the very best of big-type breeding. The boars they are bred to are known to every breeder of Poland Chinas, east or west, north or south. Heretofore I have been selling mostly at private sale, but want to give you a chance this time to make your own price. I have owned old A Wonder three years now and he has made me a lot of money. He has paid me in breeding service alone $990 in cash and A Wonder's usefulness does not end there. He has at the same time made several times as much for the breeders who got his stuff. The way I look at this is no matter how many sows you may have, if you intend to make a fall sale next year you haven't done all you possibly could do to make your sale a success unless you have a litter or two by A Wonder. Take last fall—the sales generally were a hard proposition, but for all that the pigs offered in sales in the different states sired by A Wonder made an average of better than $75. You don't have to take my word for this. You can look it up in your sale reports. This being a fact, don't it look like good business to buy a sow bred to A Wonder? What others have done you can do. I will give you the details of four bred sows I sold in two different states and only one of them I got over $100 for. I sold D. R. Keeffer, Mt. Carroll, Ill., a gilt. He sold her litter for $490. Also sold the sow for $135. I sold J. B. Morgan, Flora, Ind., a gilt, and by lantern light at that, and he sold her litter for a few dollars less than $700, and last fall sold the sow in his sale for $260. I sold J. O. Stomly, Sheridan, Mo., a bred gilt. He sold her litter last fall for $300.50 and has the sow left. George M. Cantrall bought a sow a year ago last summer in my summer sale for Adam Ashbacker for $112.50. He sold part of her litter in his sale for $407.50 and kept the sow and two boars and two gilts. J. W. Pfander & Sons sold an A Wonder litter five months old for $450 and had one pig left. Now, all these things are history that you can easily verify. Show a merchant an article that will sell as readily and on as big a margin of profit as these A Wonder pigs will sell for and he would fill his store with it. Don't you think it will be good business to buy a sow or two bred to A Wonder? Think it over. These sows went through a light attack of cholera in August, were vaccinated and are immune. All of them were over it two months or more before they were bred. They are safe to go in herds that had disease as well as herds that did not have it. I have sent stuff out since the second day of November in both herds that had disease and clean herds with good results in each case. These sows are more valuable on account of being immune. It eliminates the risk of disease. They will raise their litters, even though you should lose all the balance of your herd. Nearly all my sows got settled at first service, which is proof they are in the best of health. There is no disease anywhere near here, so I extend you a welcome to my sale." M. T. White will represent this paper at the sale and will care for any bids sent in his care. See page 44.

Veak's Duroc Sow Sale.

On February 4th, at Essex, Iowa, C. E. Veak will again make a public sale of forty head of Duroc Jersey brood sows, and he never fails to put up a splendid offering. Twenty-five head in his sale will be sired by his former great herd boar, High Col., and his two younger herd boars, Cherry Prince and Select Chief. The gilts will be sired by High Col., Proud Col., Select Chief, Cherry Prince and Valley King 2d, and these will all be bred to his great trio of herd boars, High Col. 2d, Cherry Prince and Crimson The Wonder, the latter hog being a son of old Crimson Wonder I Am. Mr. Veak is selling some very excellent High Col. sows in his sale. This boar, High Col., was regarded as one of the greatest boars he ever owned and was one of the best boars used in the West in recent years. Owing to an accident he did not live his allotted time and he was cut down in his prime, but not before breeders recognized in him a great show and breeding boar. The best sows he ever sold were daughters of old High Col. and he has some good ones again in this sale. He is also selling daughters of Select Chief, Cherry Prince, Proud Col. and Valley Chief 2d. He is selling a splendid Select Chief gilt, out of High Duchess 5th, and she is bred to his good young boar, Crimson The Wonder. This gilt is a litter sister to Selection, a boar that he is keeping, and he is an outstanding good one. Four extra choice High Col. gilts go in bred to Crimson The Wonder and Cherry Prince. These are out of a Proud Col. dam, that great breeding boar owned by Fred Strong and Henry Allen. He is also selling some very choice gilts by Cherry Prince and by the way, we will just say that in him he has a grand good breeding boar, one that we predict is going to be a grand good breeding boar. He will sell ten or twelve yearling and fall sows that are daughters of High Col. and some of these are cracking good ones. A good Choice Goods sow bred to High Col. 2d will also be one of his best breeding matrons, and a good Proud Col. sow, out of an Ohio Chief dam, is also one of the good things in his sale. This sow was one of the best in the Joe Droz sale last winter. Altogether it is a good offering and breeders will find he has the goods to show the boys when they attend his sale. His catalog is now ready and will be sent on application. When writing for it kindly mention this paper. Bids sent to M. T. White, representing this paper, in care of Mr. Veak, will be properly looked after on day of sale. See page 43.

Dickey-Fain Combination Duroc Sale.

On Tuesday, February 4th, at Emmetsburg, Iowa, F. H. Dickey and H. S. Fain will hold a combination sale of Duroc Jersey bred sows, the selections to be made from the tops of both their herds. There will be sixty head offered at the sale on this day, the opening day of the strong circuit of sales to be held in northern Iowa. There are strong features about both these herds and buyers who may attend this sale will have some nice stock to pick over. Those who attended the sale held by Mr. Dickey last year will remember the great lot of brood sows he kept over for the next season. The draft that goes in from his herd this year is from that same collection of sows. The old herd boar that he has had for several years, and which made such a good impression among the breeders at the Iowa State Fair in 1911, when he was in the pens there, is the sire of many of the gilts. He was a big boar, as big as the boars of this breed usually get, and one of the most prominent features about him was the fact that he was the biggest-boned boar in any of the pens at that time. The pigs he has sired here are the same way, and they also have a lot of the same size as he had. A considerable part of the offering from Mr. Dickey's herd is by Royal Col., one of the good sons of the old champion, Freed's Col. Some of the matured sows that will go in the sale from this herd are the big, stretchy sort that breeders are always searching for. Mr. Fain has a lot of both tried sows and young gilts which are very high class. The biggest and stretchiest are by Fain's Select, a son of old Chief Select. This boar has made a great development since a year ago, and is now a big fellow, with an unusually good front, a strongly arched back, a good big bone and is up square on his feet. Mr. Fain made a ten strike when he bought last year at a sale in western Iowa a sow bred to the prize-winning boar, Missouri Model Top. This sow farrowed only a small litter, but from that litter she raised a boar pig that, if she had farrowed only the one pig and raised it, would have been worth all she would have cost anyone. This pig is called Missouri Model Top Jr. and is one of the most important parts of the herd at this farm. He has grown out very well, indeed, has good length, a strong back, well arched, and stands up squarely on his toes, and has the promise of developing into one of the best boars in this section of the state. Mr. Dickey puts in some very good tried sows, as, for example, Miss K. Wonder by Rex Wonder Jr., Bessie Lady by Crimson Dale by old Dale and Golden Lady by Golden Wonder. These sows are good breeders and are worth taking to some place where the good stock is none too good. He also puts in some gilts by the big-boned old boar, Col.'s King, out of the sow, Roxie, that are very attractive. There is on nearly every breeder's farm one or more old sows that have made exceptional records for themselves, and this sow, Roxy, is one that has done that here. Her gilts are bound to be good ones. Some of the gilts by Fain's Select have made good growth and will be in nice shape by the day of the sale. One of the good litters that has been entered in this sale by Mr. Fain is by Fain's Select and out of a sow by Freed's Col. These gilts have good form and build, are smooth and look to be prospects for the right sort of brood sows. To judge best of the excellence of the offering you had best plan on attending the sale. The catalogs will tell you all about the breeding and you may be sure of finding a well-proportioned lot of pigs here to make your selections from. When you write mention The Homestead. Address either F. H. Dickey or H. S. Fain, Emmetsburg, Iowa. See page 45.

SWAN & ELLIS' GREAT SALE
DUROC JERSEY BRED SOWS
INDIANOLA, IOWA, SATURDAY, FEB. 8TH

30 SOWS
bred to our great boar
I AM A CRIMSON WONDER II.

NEWS OF THE SALE RING.

Welch's Percheron Sale.

W. H. Welch held a successful sale of Percheron horses at his farm near Pontiac, Ill. The horses were a strong, useful lot, produced by Mr. Welch under conditions that made for their future usefulness. In addition to the Percherons Mr. Welch sold a number of grade horses and some trotting-bred stock, and a satisfactory clearance was made of everything cataloged. Buyers secured good values, as a rule, yet prices were of such a nature that the sale represented a profit to the gentleman making it. The attendance was large, the weather excellent and auctioneers Reppert, Brown, Merriman, Hughes and Aspel did a good day's work. The detaled list of Percheron sales follows:

MARES AND FILLIES.

Bluen, foaled 1905; Wesley Porter, Pontiac, Ill.	$460
Nig, foaled 1898; R. White, Geneva, Ind.	200
Murmur, foaled 1907; F. A. Patton, Trivoli, Ill.	495
Myrtle, foaled 1908; T. J. Holmes, La Fayette, Ind.	425
Mayme, foaled 1909; J. H. Myers, Croft, Ill.	510
Grace, foaled 1906; Minott Silliman, Toulon, Ill.	500
Graceful, foaled 1912; Cras. Grant, Tonica, Ill.	255
My Lassie, foaled 1906; John Vint, Odell, Ill.	350
Princess, foaled 1912; Chas. Grant	275
Neda, foaled 1907; Chris. Ging, Chenoa, Ill.	400
Neva, foaled 1912; H. W. Rowe, Creston, Ill.	250
Eleoise, foaled 1909; J. H. Myers..	400
Beulah, foaled 1908; Thos. Nolan, Pontiac, Ill.	275
Jessica, foaled 1908; George Prichard, Dwight, Ill.	365
Miss Prim, foaled 1097; B. B. Stevens, Lexington, Ill.	395
Effection, foaled 1905; Joe Kurth, Gridley, Ill.	225
Affection, foaled 1912; R. White...	180
Mircelle, foaled 1911; R. White....	235
Adorable, foaled 1911; Carl Schuble, Pontiac, Ill.	335

Bloomingdale, foaled 1911; John Sellmyer, Pontiac, Ill.....$....	300
Prince Glorious, foaled 1910; R. White	165
Appollot, foaled 1912; H. W. Rowe	235
Princeps, foaled 1912; R. White...	145

The Dietsch Short-horn Sale.

K. F. Dietsch, Orleans, Neb., held a very successful sale of Short-horn cattle at Scribner, Neb., on January 15th. The sale was well attended by breeders from over the state and a good local gathering was also in evidence. Farmer buyers were conspicuously absent, but a number of young breeders and a few older men with young herds were the chief support of the sale. R. A. Templeton & Sons, Tekamah, Neb., were the chief buyers of the sale. Godfrey Landholm, West Point, Neb., was also a liberal buyer. Victor Star, the choice son of Morning Star, went to head the young herd owned by Aug. Arps, Dodge, Neb. He was the top of the sale, selling at $265. Counting out ten calves sold separate from their dams, the offering made an average of $105 per head. Colonel Callahan did the selling and was in fine form. His clean-cut, fair and square method of selling had much effect on the buyers. Those selling for $100 or more are given below:

BULLS.

Victor Star, calved April, 1911; August Arps, Dodge, Neb.....$	265.00
Golden Star, calved January, 1911; Valentine Thomas, Yutan, Neb.	126.00
Teddy Star, calved April, 1911; Victor Landholm, West Point, Neb.	125.00
Roan Rex, calved January, 1911; Gust Weigle, Hooper, Neb....	131.00
Barmpton Star, calved April, 1911; Nick Gaspers, Lindsey, Neb.	105.00

COWS.

Scotch Lass, calved May, 1909; R. A. Templeton & Sons, Tekamah, Neb.	154.00
Marigold, calved January, 1910; M. Stenvers, Hooper, Neb.....	177.50

Roan Lass, calved January, 1909; Godfrey Landholm	155.00
Barmpton Lass, calved 1906; R. A. Templeton & Sons	102.00
Gracia, calved 1904; Godfrey Landholm	129.00
Gracia 2d, calved 1910; R. A. Templeton & Sons	117.00
Gloster's Maid 2d, calved 1911; R. A. Templeton & Sons	105.00

Following is the report of Walpole Bros.' sale of Short-horn cattle at Rock Valley, Iowa, on Tuesday, January 7th. The Walpole Bros. seem always to strike bad luck in the weather on their sale dates, and this year was no exception to their rule. An average of $134.50 was secured on the forty-six head sold, the bulls averaging $153 and the females $130. Buyers were scattered from Dakota, Minnesota and Iowa. The top of the sale was No. 2, Princess, selling for $280 to C. A. De Vaul, Inwood, Iowa. The bulls did not bring what they should, being an exceptionally high-class offering. The sale was conducted by Col. Geo. P. Bellows in his usual satisfactory manner. Those selling for $100 or more are listed below:

Honey Flower, calved 1904, and c. c.; Held Bros., Hinton, Iowa.	$175.00
Princess, calved 1904; C. A. De Vaul, Inwood, Iowa	280.00
Princess 4th, calved 1909, and c. c.; Cahill Bros., Rockford, Ia.	180.00
Fair Maid 2d, calved 1905, and c. c.; E. J. Thompson, Huxley, S. D.	220.00
Fair Maid 3d, calved 1908, and c. c.; E. W. Carr, St. Lawrence, S. D.	127.50
Fair Maid 4th, calved 1909, and b. c.; F. W. Harding, Waukesha, Wis.	265.00
Fair Lady, calved 1908, and c. c.; D. R. Jones, Linn Grove, Iowa.	122.50
Fair Lady 2d, calved 1909, and c. c.; E. R. Silliman, Colo, Iowa	175.00
Fair Lady 3d, calved 1910, and c. c.; F. W. Harding	200.00
Fair Mary, calved 1910, and b. c.; H. G. McMillan, Rock Rapids, Iowa	150.00
Diamond Queen, calved 1905; Diamond Queen, calved 105; Held Hel dBros.	175.00
Blythesome Girl 8th, calved 1906; W. J. McLean, Rock Valley, Ia.	205.00
Queen Victoria, calved 1908; E. R. Silliman	165.00
Lovat Princess, calved 1908; H. E. DeVries, Hull, Iowa	112.50
Marchioness Choice, calved 1910; C. A. DeVaul	185.00
Mysie Bloom 2d, calved 1908; H. A. DeVries	102.50
Mysie Bloom 6th, calved 1907; Herman Joseph, Leota, Minn.	127.50
Bride's Maid 7th, calved 1909; A. A. Rose, Hull, Iowa	107.50
Crown Rose 7th, calved 1907, and c. c.; H. A. DeVries	120.00
Glen Wimple 2d, calved 1909; H. J. Von Otterloo, Rock Valley, Iowa	110.00
Violet Star, calved 1910; H. G. McMillan	105.00
Sunflower, calved 1908, and c. c.; Jno. McKeegan, Rock Valley, Iowa	102.50
Albion Lady 2d, calved 1909; E. W. Carr	105.00
Roseblush 2d, calved 1909; John McKeegan	130.00
Emma Elwood 4th, calved 1909; J. L. Wright, Larchwood, Ia.	107.50
Highland Queen, calved 1906, and c. c.; H. H. Powell & Son, Linn Grove, Iowa	120.00

BULLS.

Parkdale Goods calved 1907; John Frick, Hartley, Iowa	225.00
Cumberland Aconite, calved 1912; H. P. Myfle, Rock Valley, Ia.	210.00
Chancellor, calved 1911; Held Bros.	100.00
Billy Sunday 2d, calved 1911; E. Williams, Linn Grove, Ia.	150.00
Emma's Archer, calved 1911; Sullivan Bros., Sanborn, Iowa	180.00
Ruberta's Archer, calved 1911; Geo. Seligel, Alpena, S. D.	165.00
Prince of Orange, calved 1911; John Miller, Rock Valley, Ia.	140.00
The Goods, calved 1910; A. J. Deseter, Mineota, Minn.	147.50

TOO LATE TO CLASSIFY.

25 MAMMOTH JACKS, 25 JENNETS

MISSOURI, Iowa and Illinois prize winners in 1912 and others as good 15 to 16 hands high jacks are priced right. They range from two to five years, have big bone, good heads and ears, and are blacks with mealy points. Come and see them or write mentioning The Homestead.

DEIERLING & OTTO, QUEEN CITY, SCHUYLER COUNTY, MISSOURI

LAFAYETTE COUNTY JACK FARM

10 PERCHERON STALLIONS 10

SELL or trade for good jacks. All registered, mostly imported. 40 MAMMOTH KENTUCKY and MISSOURI-BRED JACKS and JENNETS 14½ to 16 hands high. All blacks. Jacks are broken. Jennets bred to Dr. McCord. Everything priced to sell. NO PUBLIC SALE THIS YEAR.

W. J. FINLEY, - HIGGINSVILLE, MO.

CHOICE DUROC JERSEY BRED SOWS

I HAVE pursued a line of breeding that is of much value to intending buyers, and as I still have a choice lot of sows of highest breeding and choice individuality on hand will price them where they should sell at once. Mention The Homestead and address at once for full information.

A. J. RUSSELL, - - - CRAB ORCHARD, NEB.

HICKORY CLUSTER DUROC FARM

FOR SALE. A few choice sows bred to Col. Pilot Wonder and Mound's Col. A few extra nice fall pigs, either sex. SMITH & RODGERS, Springfield, Ohio.

THE LIVE STOCK MARKET

Union Stock Yards, Chicago, Ill., January 17, 1913.—Soft and unseasonable weather, coupled with free liquidation of half-fat cattle, has wrecked the beef trade badly and immediate future prospects are not rosy for the selling side. The general crop of cattle at six western markets this week foots up about 158,000 head, 9,000 more than the week previous and 5,000 in excess of a year ago this week, and it has filled the channels of trade so full of beef that only a twin to genuine winter weather and lighter supplies of beef on foot are likely to open the way to better trade conditions. Through their continued haggling at the market buyers have reduced the cost of weighty cattle very close to $2 per hundredweight from their value here early in December, numerous good, smooth, fat steers having sold here recently around $8.35 that would have brought $10.35 much more readily during the first ten days of December, and ripe heavy cattle that sold here Monday of this week up to $9.50 and which late in the week would have trouble making $9.25 would have been right up in the $11 class had they been here sixty days ago. The range, as predicted in these columns some six weeks ago, is narrowing greatly, the lighter classes of beef steers selling 40 to 50 cents per hundredweight above their value at the time when prime steers were making their record prices. Steers selling now below $7 have no claim to decent beef quality, a spread of from $7.50 to $8.50 is taking the great bulk and only a very thin upper crust of prime bullocks pass $8.75.

The present sluggish condition of the trade and narrow outlets for the higher-costing, well-finished cattle suggests the probability of continued free liquidation of half-fat kinds during the next sixty days and a corresponding decrease in the winter consumption of corn will be the logical result. Packers have served notice by the $2 slump on choice cattle that they have enforced since the December high spot and feeders by cashing in warmed-up stuff are taking the short route out of their dilemna. Two years ago, when corn was abundant, feeders carried a lot of heavy cattle through the winter and when the stock was marketed in the spring feeders found themselves minus their corn crop, consequently they are not in the mood to repeat the experience. Feeders' margin of profit has now practically disappeared and the slump at the yards this week, which amounts to 35 to 50 cents on the bulk of the steers, has merely accentuated determination to empty feed lots. Beef trade at present is a vexing puzzle, but the key to the situation is believed to be that consumers are not getting access to beef at materially lower prices than last fall. Beef steer quotations at Chicago at this week-end follow:

Prime steers, 1,450-1,700 lbs.	$8.75@9.25
Choice steers, 1,230-1,400 lbs.	8.15@8.70
Good steers, 1,230-1,300 lbs.	7.65@8.10
Plain fair beef steers	7.10@7.60
Fancy baby beef yearlings	8.50@8.90
Good to choice yearlings	7.65@8.40
Medium to good yearlings	6.90@7.65
Common to fair yearlings	6.50@6.90
Inferior steers, 850-950 lbs.	6.00@6.40
Common steers, 750-850 lbs.	5.80@6.25

While some slight recessions are reported in stock and feeding cattle values, and some have undoubtedly been obtained at prices 15 to 25 cents below the high values current at the start this week, when prices were fully as high as have ever been paid at this market, actual declines from a week ago are hard to locate. The trade continues remarkably broad, considering the high prices current and the slumpy condition of the fat cattle market and, further than reflecting the plentitude of feed, does not fail to indicate that feeders have confidence in a high level cattle trade next spring and the development at that time of the most acute scarcity of stock and feeding cattle the trade has ever known. Thousands of feeders of good weight and class have sold here this week at $7.15 to $7.50, the best heavy feeders ranging upward to $7.65 to $7.85 and high-class 789-pound Angus yearling feeders making $7.50. Many of the plainer 750 to 950-pound feeders sold at $6.50 to $7 and a pretty well-bred class of 600 to 700-pound stuff within this range. Plain and decent light stockers go around $5.75 to $6.25, but only trash either in the stock steer or heifer line below $5.50. Quotations:

FEEDERS.

Selected, 1,000-1,100 lbs.	$7.10@7.75
Fair to good, 800-1,000 lbs.	6.35@7.00
Plain to good light	5.65@6.30
Feeding heifers, poor to good	5.35@5.75

STOCKERS.

Selected, 550-700 lbs.	6.65@7.10
Good straight lots	6.20@6.60
Fair to good, 500-650 lbs.	5.75@6.10
Common to plain mixed	5.25@5.65
Heifers, common to good	4.85@5.65

Good fat cows and heifers have been bumped hard this week and the better the class the harder has been the fall. The decline has left the spread between merely decent and fairly choice grades illogically narrow, a packer buyer showing the writer purchase steers today on which cows costing $6.25 on the hoof showed a dead cost of but 16 cents per hundredweight more than cows purchased at $5.25. Soft weather is partly responsible for this unusual trade condition. Carcass beef cannot be displayed in the big markets in such weather without becoming discolored and getting in an unattractive condition, with the result that retailers are shunning the higher-priced carcasses in favor of cheaper stuff. Within the last ten days fairly good to choice fat cows have declined a big 50 cents per hundredweight and the decline on heifers selling ten days ago from $6.25 up has been rather more severe. It takes a very prime cow to land now at $7 and some choice fat 1,056-pound heifers sold today at that figure. Medium to very good heifers at $5.50 to $6.25 were $6.25 to $6.75 kinds or better ten days back. The slump in beef classes has but very slightly affected the market for canners and cutters, which continue in light supply. A good class of cutters is selling around $4.50 and canners selling below $3.75 are very much on the hat-rack order. Bologna bulls have held within 10 to 15 cents of last week's prices and continue very high, but beef bulls are 25 to 40 cents lower, very few selling above $6.50, though good-weight bolognas are reaching $5.70 to $5.80. Choice veal calves are selling up to $10.65 to $10.90, and although only a luxury demand for veal at such prices exists, the market is expected to continue high for the next two months as scarcity will continue until the calf crop from the dairy districts is ready in the spring.

BEEF COWS.

Choice to prime fed cows	$6.00@7.00
Good to choice cows	5.40@5.90
Fair to good cows	5.00@5.35
Inferior butcher cows	4.50@4.85

CANNERS AND CUTTERS.

Good to choice heavy cutters	$4.25@4.50
Fair to good light cutters	4.00@4.20
Fair to good canners	3.60@4.00
Poor to fair canners	3.25@3.50
Old, thin, weak shells	3.00@3.20

HEIFERS.

Choice to prime heifers	$6.60@7.60
Good to choice fed heifers	5.65@6.50
Fair to good grass heifers	5.15@5.60
Common to fair heifers	4.50@5.00

BULLS.

Good to choice bolognas	5.65@5.80
Light and medium bolognas	5.20@5.60

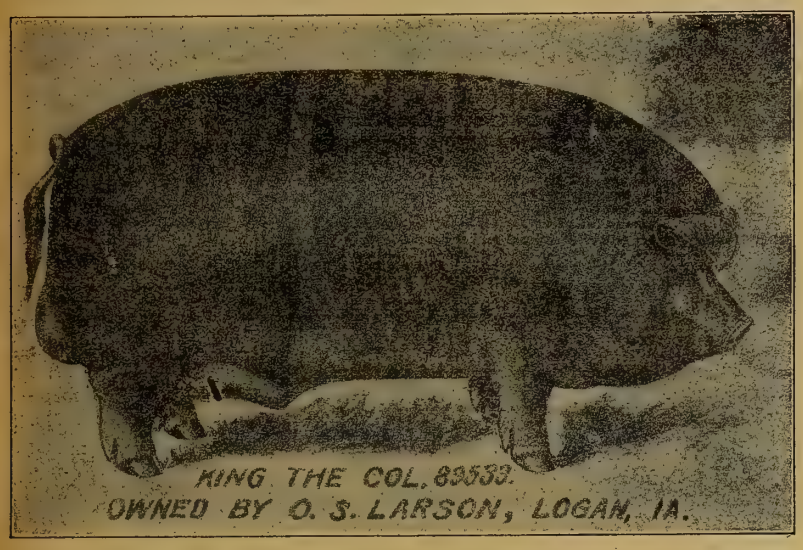
W. H. WALTERS BRUCE, S. D., buys, rents and sells Brookings Co. farms, or will trade for pure-bred live stock.

BLUE RIBBON STOCK FARM offers for sale some choice Scotch Collie pups of highest breeding. H. C. Mehring, Manson, Iowa.

About $1,000,000 worth of road work was done in Wisconsin last year under the general direction of the state highway commission. During the coming year, it is expected that $2,500,000 will be expended in road improvement. To carry on this work to best advantage the state highway engineers will need to have a corps of competent foremen. If responsible men who have had experience in handling men and tools, in moving dirt or building city streets, country roads or railroads apply, they will be offered employment. The state engineering department will prepare and furnish a list of competent foremen to all county highway commissioners in order to assist them in the selection of men to have charge of their work during the coming year.

The Grant Lynn Sale of Duroc Jerseys.

On Wednesday, February 5, 1913, at Spirit Lake, Iowa, Grant Lynn will sell forty head of Duroc Jersey bred sows which have both individual merit and royal breeding. There are eighteen tried sows in the lot and one thing about them that will interest breeders is the fact that every one is a good producer, having raised fall litters this past season and now safe in pig and in good condition for the next farrowing. The remainder of the offering, consisting of twenty-two gilts of last spring's farrow are what any breeder would consider an extra good lot on his own place. They have on the average lots of stretch, we didn't notice a poor back in the bunch, and the entire lot is well proportioned, symmetrical and even, the latter a point which we consider shows the ability of the man who raises pigs, as a breeder. The old herd boar, Evergreen Prince, which Mr. Lynn had at Des Moines this year and also at Sioux City where he was third among the aged boars, would attract favorable comment by any breeder at this season. He is in much better condition today than he was at the Interstate Fair, and that after serving his share during the breeding season. We wish he might have been driven into the ring at both Des Moines and Sioux City in his present clothes, but it isn't every breeder who has his farm to look after who can find the time to do everything he would like. Evergreen Prince is by High Col. by Prince of Cols., dam Dallas Queen by Model Prince. Dallas Queen is one of those extra good producing brood sows which breeders keep till they die in the harness. There are in this sale ten of the yearlings and twelve spring gilts by this boar and six more bred to him, so nearly three-quarters of the offering could be called an Evergreen Prince offering. The rest of the spring gilts that will sell are by a son of Defender, the great International champion. This boar bred well on the sows that he was mated to and the best of the gilts he produced are listed. The two young boars that will take their places as herd headers this year are G.'s Crimson Wonder and Lynn's Golden Model, both strong in the blood of the strains the names of which they carry. The Crimson Wonder boar is by the great Crimson Wonder I Am out of Daisy S. by Model Advancer Choice, second dam Helen Wonder. He is a rich cherry color, a square-built, big, lots of length, good bone and good on his feet. Fourteen of the sows will sell safe in pig to his service and we would consider them good breeders' propositions. Two litter brothers to this boar head herds, one F. H. Dickey's, at Emmetsburg, the other Fred Strong's, at Orient, Iowa. G.'s Golden Model is by Golden Model 31st by Golden Model 2d, dam Fancy Wonder 3d, first in class at Sioux City, Huron and Hamline and grand champion at the latter show in 1912. The sows and gilts are well bred and are good individually. Watch for an account of them next week. In the meantime send for catalogs, which will reach you quickly on request, and mention The Homestead. Ray L. Gribben is the field man and will give you good service. Address Grant Lynn, Spirit Lake, Iowa. See page 45.



King the Col. is undoubtedly one of the greatest Duroc Jersey sires living today. So numerous are the high-class boars and sows of his progeny that this sire really is in a class by himself. The characteristics of his get are good size, plenty of length with abundant bone, all this associated with good, strong backs. About twenty sows bred to King the Col. will be in the sale of O. S. Larson & Son, Logan, Iowa, Thursday, January 30th. See advertisement on page 52.

The McCullough-Hamilton Poland Sale —Last Call.

The sale of Poland Chinas that will be made at Central City, Neb., on January 30th by O. J. McCullough, Clarks, Neb., and L. W. Hamilton & Sons, Kearney, Neb., is a sale that should receive much support from buyers of their type of hogs. Mr. McCullough made one of the good sales of the year last season and Hamilton & Sons are among the most noted breeders of Poland Chinas of the whole country. Some very noted sires have come from this herd. The McCullough offering is strong in big-type blood and includes, among other nice things, a state fair prize-winning litter. They are sired by Big Price 2d by Big Price by Big Ex and they are out of a dam of good breeding and one that has raised a lot of the good ones. That feature should be worth something to the intending buyer. Try to get to this sale. It will be held in a comfortable place and where hotel accommodations are of the very best. Send a bid on some of the choice ones if you cannot attend, but be on hand in person if at all possible.

Lake Park Duroc Jersey Sale.

Thursday, February 6th, is the date of the third of the northern Iowa circuit of Duroc Jersey sow sales. S. L. Weaver, of Lake Park, will put up a draft from his herd at auction that day. S. C. Weaver, of this firm, will be remembered as the active member of the firm Weaver & Fountain, which for the past few seasons has been engaged in the production of a useful class of Duroc Jerseys at Montgomery, Iowa. This sale rather reverses the usual order in bred sow sales in that it is mostly a tried sow offering. Twenty-four tried sows, all in their producing prime will be sent through the ring sale day, and only eighteen gilts. The most of the gilts of last spring's crop were a little too late in being farrowed to be ready for sale at this time, so only the early ones will be sold. Okoboji Col. is the premier herd boar of this herd and is a big fellow well made, and in good condition a showy boar. He was placed first in some competition a little stiffer than county fairs usually see, at the Dickinson County Fair at Spirit Lake this year. Pigs sired by Okoboji Col. are all pretty much alike, regardless of their dams, stamping him as a prepotent sire, a most desirable qualification in any herd header. He is, on his sire's side, a grandson of Col. Stoner by King of Cols., and also traces to Advancer Col. in the third generation on the "top" side of his pedigree. His dam, Lauretta, was by Inventor out of Proud Jessie by Proud Advance. This shows his breeding to be right and such that one would expect a good individual. Helen's Chief Col. by Chief's Col. by King of Cols. (Chief's Col. is out of Chief's Burketta by Ohio Chief), dam Helen's Duchess by Ohio Chief out of Helen Blazes, is the younger boar, and look at his breeding. He lost out in his early development, having gone through a pretty tough siege of trouble a year ago, so had not a very good show, but his blood lines show up in his get. Two younger herd boars, litter brothers by Crimson Wonder Again, are pretty good prospects and have been used extensively. The sows have all been regular and prolific breeders, having had to pay their way on a farm in a practical manner. The catalogs are ready and will furnish detailed information. Sale at farm three miles southwest of Lake Park. Ray L. Gribben is field man. Address S. L. Weaver, Lake Park, Iowa. See advertisement on page 45.

Kuper Bros.' Duroc Sale.

Kuper Bros., Bellevue, Iowa, will hold their second annual sale of Duroc Jersey bred sows on January 30th. The sale will be held in town, which will make it convenient for parties from a distance to catch the early train. They are not selling a large number of sows, but they are selling thirty good ones. They are selling ten yearlings and twenty gilts that are a credit to their ability as breeders and feeders. The yearlings will be sired by The Professor, Muncie Chief, Model Wonder, Protection Col. 2d and Col. Highbred. These yearling sows are worthy the attention of any breeder. The gilts are largely sired by Ames Col., the second-prize senior yearling boar at the Iowa State Fair, 1912; the balance are sired by Springfield Wonder by Prince Wonder Again, S. E.'s Premier Col. by Premier Col., Proud Ohio Chief by Ohio Chief and Protection Col. 2d by Protection Col. These gilts have the size and smoothness that all breeders like and a number of them are bred to Young Premier, a son of S. E.'s Premier Col. and out of a Golden Model 6th sow. Carlos C. Palmer will represent The Homestead at this sale and handle any bids sent in care of Kuper Bros. See page 49 and write for a catalog, mentioning The Homestead.

DISPERSION SALE OF GRAND CHAMPION

DUROC JERSEY BOARS AND SOWS

At the Farm Adjoining

GLENWOOD JUNCTION, MO., FRIDAY, FEB. 7, '13

SOME ATTRACTIONS IN THE SALE

OHIO COL. by King of Cols., dam by High Chief by Ohio Chief. Ohio Col. was second at Lincoln, 1910, and grand champion of Kansas same year. He is one of the real great breeding boars of the day.

MODEL QUEEN, grand champion sow of Nebraska and Kansas, 1910, and sold for $750 at auction, 1911, highest price of the year. She has raised two litters each year and will farrow April 6th to service of Successor.

CHIEF'S MAID (by Valley Chief), grand champion sow Iowa State Fair, 1912, and has raised a fall litter. Bred to Ohio Col. for March 17th litter. If you want to raise a champion buy her.

OHIO QUEEN (by Ohio Chief), third at Iowa and Nebraska, 1912, fourth Nebraska, 1911, has raised a fall litter and is bred to Ohio Col. for a March 16th litter. She is a great brood sow.

MODEL QUEEN 6TH, one of the best daughters of Model Chief is bred for a March 15th litter to Ohio Col.

There are many other good ones including three fall yearling sows by Ohio Col. and out of Model Queen, a yearling sow by Prince of Cols., dam Model Queen, a great daughter of Chief Select, others by The Professor, King of Cols., Valley King Again, Model Wonder, Golden Model, The Chief, Proud Ohio Chief, Proud Col. and others, two litters of fall pigs by Ohio Col., one litter out of Model Queen, the other out of Chief's Maid. Another fall litter by Valley King Again and out of Ohio Queen. Don't miss the sale. Write me for a catalog mentioning The Homestead. Colonels Reppert, Kraschel and Allen, auctioneers.

Ringmaster Short-horns in the Sale Ring.

It is a remarkably attractive lot of Short-horns that White & Smith will place before buyers at Chicago, February 12th. Fifty head from the herd at Meadow Lawn Farm will be sold and the fact that they come from the hand of that master cattleman, Leslie Smith, should be sufficient guarantee as to their individual merit. Mr. Smith has dipped deep into the good things of the herd, and the buying public will have an opportunity to pass judgment upon an offering of cattle that will not be excelled in any sale ring this season. Not only will it be a strongly-bred Scotch lot, but championship blood will predominate. It may well be called an offering of Ringmaster Short-horns, as sons and daughters of this undefeated champion bull will be numerous, while over one-half of the female portion of the offering is bred to him. Four young Ringmaster bulls are in the list and prospective buyers of herd-heading propositions will find among them good values. Five other good young bulls, all the get of well-known sires, are in the list and they are the right kind. The female portion of the offering is little less than sensational. It is headed by the grand champion cow of the 1912 International Live Stock Exposition, Roan Queen. Any comment on this superb beast is unnecessary, but the fact she is due to calve soon after sale day to the service of Ringmaster is a matter of consequence. The produce of this mating should be something of remarkable merit. Ringmaster has the wonderful record of never having been defeated in class and has won over forty championships and grand championships, while Roan Queen has twenty championship ribbons to her credit. It is rare indeed that two animals with such remarkable show-ring records are mated and the value of produce of this mating it is impossible to estimate. Roan Queen is by no means the only high-class cow in the offering. She will have plenty of strong company. It is not our intention, however, to particularize at this time. That will be done in later issues. Twenty two-year-old heifers are listed that are a remarkably outstanding lot. Included in the female list are several daughters of Ringmaster, while there are others by such sires as Superbus, Juno Clipper and March Knight that are bred to Ringmaster, and several of the older cows sell with calf at foot by Ringmaster. With just one exception every animal in the sale is a member of some popular Scotch tribe, such as the Duchess of Gloster, Lavender, Broadhooks, Venus, Clara, Juno, Mayflower, Butterfly, Violet, May Blossom, Flora, Miss Ramsden or Mina, and they will be presented in excellent condition. Leslie Smith is a past master in the breeding and handling of cattle, and he will send to this sale a lot of animals that will be a credit to his skill and worthy representatives of the great Short-horn breed. In later issues more detailed information will be given. The advertisement appears on page 46. Look it up and send for a copy of the catalog to White & Smith, St. Cloud, Minn., mentioning The Homestead.

Nash's Poland China Sale Offering.

The really great sow sires of the Poland China breed that have acquired a noteworthy reputation the past ten or twelve years might almost be named on the fingers of one hand. The next decade may show up many more, but the writer rather doubts that it will, but we really believe that one that should become famous in that time is the great young boar, Gold Medal, now owned and used by J. T. R. Nash, Minden, Neb. Mr. Nash surely has a choice lot of stuff sired by him; in fact, nearly all of the gilts that go in the Nash sale, February 8th, are his get. They are surely a toppy lot of sows, the big, deep, stretchy, brood sow kind. We would like to see a lot of Homestead readers at this sale. These are the kind of hogs we would recommend new beginners to buy and they are also the kind for all breeders to purchase. A Gold Medal gilt bred to Long Jumbo should sure make good and we believe they will. Send for a catalog at once and mention The Homestead. See page 46.

Kreischer's Poland China Sale.

E. W. Kreischer, Mt. Vernon, Iowa, will hold his second annual sale of Poland China bred sows at his Sandy Hill Stock Farm on February 6th. He will sell fifty head, consisting of twelve yearling, twenty-four fall yearling sows and four spring gilts. The offering is of the large, heavy-boned, smooth kind, and they are in fine condition to raise large, healthy litters. Seven of the yearling sows and seven fall gilts and one extra good spring gilt are sired by his noted 1,000-pound herd boar, Mastodon Chief. Five yearling sows, ten fall gilts and three spring gilts are by the great boar, Tecumseh Prince, that Mr. Kreischer has been using in the herd with marked success. There will be eight fall yearlings by the 900-pound boar, Chief Jumbo, used so successfully in the herd of W. H. Cooper. There will also be two fall yearlings by Mr. Cooper's noted boar, Big Bone 2d. Seven fall yearlings by Thor, one of the good breeding sons of Smooth Wonder 2d, are cataloged. A representative of The Homestead recently inspected this offering and was highly pleased with the size, quality and uniformity of this lot of sows. We can strongly recommend them to anyone looking for strictly big-type Polands, bred right and fed right. The sows are bred to some of the most noted boars of the breed. The best known probably is Mastodon Chief, the great 1,000-pound boar with an eleven-inch bone, that was purchased from the noted Wheeler herd. He has been used in Mr. Kreischer's herd for three years and the grand lot of big, smooth sows on Mr. Kreischer's farm sired by this noted boar is the best evidence of his ability as a sire. A number are bred to Big Jumbo 2d, a son of the noted Big Jumbo bred and owned by Peter Mouw. Nearly all of the Mastodon Chief sows and gilts are bred to Big Jumbo 2d. A few are bred to Surprise Chief, one of the best sons of the noted Tecumseh Prince, and a few to Mastodon Wonder, one of the best sons of the great Mastodon Chief and out of the great sow, Smooth Lady, by A Wonder, that sold for $100 in Mr. Kreischer's last sale. This sale has been planned for by Mr. Kreischer during the past year and it has been his ambition to put up an offering that would be hard to equal and we believe he has succeeded in doing so. He has sows and gilts good enough to go in any breeder's herd and they are bred to boars with national reputations. See page 48 and write for a catalog, mentioning The Homestead. Parties who cannot attend the sale can send their bids to C. C. Carlin, Homestead representative, in care of Mr. Kreischer, and they will be treated in an honest and careful manner.

Healy's Bates Short-horn Sale.

In last week's issue we announced the sale of forty head of Bates-bred Short-horns, of the most noted milking strains, from the herd of O. M. Healy, Marshalltown, Iowa, on January 28th. This is probably the only sale of purely Bates-bred Short-horns that will be held in the West this year, and those of our readers who are interested in the milking strains of this great breed will be especially interested in the Healy sale. He is selling thirty head of females and ten bulls, including his present herd bull, Earl of Barrington. This bull is a roan in color, will weigh over a ton and belongs to the Lally Barrington tribe. He is a descendant of Imp. Lally 8th, a cow that sold in the Groom sale for $1,550. He is one of the best bred Bates bulls that has ever been used in the West. This bull is the sire of most of the heifers and the young bulls in the sale. Another good bull is 7th Duke of Wapsie, an Airdrie Duchess bull that should meet with favor from those who attend the sale. Besides are eight young bulls, all of the Oxford, Airdrie Duchess and Grand Duchess tribes. Mr. Healy is selling a splendid lot of females of these same families, including a grand good lot of cows and some splendid heifers. We made individual mention of many of the best of these in last week's write-up. The point at issue in regard to this sale is that these cattle are strictly and purely Bates-bred cattle, of the most noted milking tribes. In earlier years the Bates Short-horns were regarded as the milking Short-horns, and in those days commanded the highest prices. The Airdrie Duchesses, of which he has many in the sale, have been and are today the highest-priced Short-horns that we have any record of. While most of our American breeders have been breeding the Scotch sorts, O. M. Healy is one of those who has through all these years stayed with his Bates cattle, and he has never used anything but Bates bulls. In other words his cattle are strictly Bates bred, with no outcrosses. If you want Bates cattle of these most noted milking strains make it a point to attend the O. M. Healy sale at Marshalltown, Iowa, on January 28th. When writing for catalog address O. M. Healy at Bed-

GOODENOUGH'S GREATEST ATTEMPT

IN AN OFFERING OF

HAMPSHIRE BRED SOWS

AT THE FARM NEAR

MORRISON, ILLINOIS,

MONDAY, JANUARY 27, '13

Some Great Gilts in this Sale.

55 HEAD will be sold, consisting of 25 mature sows, 8 fall yearling sows and 22 spring gilts. The mature sows are sired by Teddy R. B., Bon Bon Beauty and Perfectum, a son of Bon Bon Beauty. The gilts are all sired by Shelby Lad and Perfectum. The sows will be bred to Dudie, first in junior yearling class at Iowa State Fair, 1912, and Shelby Lad, first in junior yearling class at Indiana State Fair, 1911. I will hold no sale in 1914 and for that reason I am cataloging a number of the very tops of my herd that otherwise I would not think of selling. This is the best lot of Hampshires I have ever sold at public auction and you will say so when you see them sale day. I raised them to sell and they are yours at your own price on January 27th. Write me for catalog, mentioning The Homestead, and arrange to be my guest sale day. Send bids to Carlos C. Palmer, Homestead field man, in my care, and they will be honorably treated. Fred Reppert, auctioneer. Address

A. L. GOODENOUGH, MORRISON, ILLINOIS.

LIVE STOCK PHOTOGRAPHS

FOR use in sale catalogs, and for other advertising purposes, nothing equals engravings made from actual photographs. We have the most complete photographic equipment, as well as a photographer of superior ability in posing animals. We send him anywhere on request and quote prices as low as is consistent with good work. Let us send him to you before arranging your season's advertising. Address

PIERCE & FARM WEEKLIES, DES MOINES, IOWA.

NORTHERN IOWA CIRCUIT DUROC JERSEY SALES

F. H. DICKEY **H. S. FAIN**

60 HEAD, including eight tried sows, seven fall gilts and forty-five spring gilts, the choice of the two herds. Only the tops of the herds will be offered and from the blood lines represented, it will be seen that both consignments are of the best. The herd boars in each herd are characterized by great bone and stretch, as shown in their offspring. The sires of the offering are: Col.'s King by King of Cols.; Royal Col. by the champion, Freed's Col., dam by Manley Orion; Fain's Select by Chief Select,

TUESDAY, FEBRUARY 4, 1913

and Fain's Col. by Gold Col. There are sows in this sale by other sires and other boars, but these are the principal ones of the two herds. Service boars: Mo. Model Top Jr., a great young boar by Mo. Model Top, D.'s Crimson Critic, D.'s Crimson Wonder by Crimson Wonder I Am, Fain's Select, and others of the herd boars already given. As individuals these boars are good, and are the growthy, vigorous sort that is so often chosen for the practical purposes of the farm and breeding pens.

In F. H. Dickey's Sale Pavilion

EMMETSBURG, IOWA

A COMPACT CIRCUIT OF SALES, EASY TO ATTEND ALL AND A GREAT CHANCE TO BUY SOME GOOD SOWS

SPIRIT LAKE, IA.

WEDNESDAY, FEB. 5, 1913

40 head of the choicest that I ever raised, consisting of 18 tried sows and 22 of the best kind of gilts. 22 of the 40 are by my herd boar, Evergreen Prince, which was 3rd at Sioux City last fall, and after going through the breeding season is in much better shape than he was at the fair. I will sell 6 sows that are safe in pig to him. He is by High Col., by Prince of Cols., dam Dallas Queen by Model Prince, the best producing brood sow that I ever hope to own. Ten of the spring gilts are by King's Defender, by the twice champion Defender. The entire offering is in excellent condition, and the sows will all be safe in pig to the old boar, and to G.'s Crimson Wonder by Crimson Wonder I Am, and Lynn's Golden Model by Golden Model 31st by Golden Model 2d, two good sons of these great sires. The sows are stretchy and big and good on their feet. Sale at the farm, 5 miles northeast of Spirit Lake and will be held in HEATED PAVILION

GRANT LYNN.

SPIRIT LAKE, IOWA.

LAKE PARK, IA.

THURSDAY, FEB. 6, 1913

42 head of sows that are bred for early farrow to boars that have size and are bred along popular lines. This sale will be largely a tried sow offering, for there are included 24 tried sows and only 18 spring gilts. The entire herd is strong in Colonel blood, as nearly all the sows have large proportions of that strain. The old herd boar, Okoboji Col. traces on his sire's side to both King of Cols. and Advance; his dam was by Inventor, out of a Proud Advance sow. He met some stiff competition at the 1912 Dickinson County Fair, but managed to win over it. He has considerable size, and is a strong vigorous boar. The two young herd boars, litter brothers, used for service this season, show popular blood lines, being by Crimson Wonder Again and out of a sow by W. J. C.'s Prince of Cols. This is a sale where you will find bargains in both quality and blood lines. It will be held at the farm 3 miles southwest of Lake Park. Send for catalogs.

S. L. WEAVER,

LAKE PARK, IOWA.

J. SCHMIDT, EVERLY, IOWA

40 HEAD, the pick from over 225 head that I raised on my farm last spring. There will be about a dozen tried sows, the rest gilts. I have not put in a large number, because this is my first sale and I want to sell only the very best, so those who may buy at this sale will get something which will make them want to buy more from me next year. Breeders who want to make their selections from a herd that has actually been a producing one in one of the most severe seasons for farrowing that we have known, can get what they are looking for here. The

FRIDAY, FEBRUARY 7, 1913

offering is practically all sired by Col. Tientsin, and Royal Muncie. Col. Tientsin is by a son of Carl's Col., out of a sow by Tientsin II. and Royal Muncie is by Muncie Chief, dam by American Royal. A large part of the sows cataloged are bred to a big young boar, Col.'s Model by Col. Grant, and out of a great producing brood sow, Dallas Queen by Model Prince. A practical offering from a practical herd. Address for catalogs as above. Sale on farm, six miles from town, in heated pavilion.

SALE IN COMFORTABLE PAVILION

WE heartily commend the sows advertised above to breeders who may need more females this year, for in this circuit are individuals of meritorious breeding, all with good guarantees by men who are in the habit of standing by their word. By following this compact circuit you will be able to replenish your herds with good blood and a good type of individuals without requiring you to make selections from a few in any single sale you might otherwise attend. The almost certain advance in prices of even common brood sows this year will make it more desirable than ever to look over the pure-bred sales this winter with a view of making a start in a better grade of hogs. The scarcity of good breeding stock, with the cheap corn, means a great demand for hogs on the farm, and the time was never more favorable for a man to make a start in this direction. Cols. O. L. and A. L. Mossman will be the auctioneers. Ray L. Gribben of The Homestead will attend these sales and will handle bids you may send him strictly in your interest.

ford, Iowa. Kindly mention The Homestead when writing for it.

Goodenough's Hampshire Sale.

This is the last opportunity we will have of calling the attention of our readers to the important sale of Hampshire bred sows to be held by A. L. Goodenough, Morrison, Ill., on January 22d. We have stated in preceding issues the high esteem in which Mr. Goodenough is held by Hampshire breeders. It is his good judgment, his ability to mate and develop good Hampshires and his unquestioned integrity that has won for him his large circle of friends. From such a man is a good place to buy a foundation for a pure-bred herd of any breed of live stock. Fifty-five head will be sold in his sale and they are the best lot of sows he has ever offered at public auction. Sires and dams that have produced state fair champions are found in the pedigrees of the animals he will sell. Twenty-five mature sows, eight fall yearlings and twenty-two spring gilts make up the offering. The gilts are largely by Shelby Lad, a first-prize state fair winner at Indianapolis in 1911, and a number of the sows are bred to him. There will be a number bred to Dudie the first-prize junior yearling boar at the Iowa State Fair in 1912. This boar is a son of Compeer, the noted boar that has sired so many winners in the Essig herd. The matured sows are largely sired by Bon Bon Beauty, the first-prize junior yearling at the Illinois State Fair in 1908; Teddy R. B. and Blythedale Jim, two boars that have been used in the Goodenough herd with marked success. Mr. Goodenough has decided to hold no sale in 1914 and for this reason is putting up a number of sows that he would not sell if he expected to hold a sale next year. He feels that by holding a sale every other year he can put up a better offering, as he fully realizes that breeders will travel many miles after the best. Bids sent to Carlos C. Palmer, Homestead representative, in care of Mr. Goodenough, will receive careful attention. See page 44.

C. A. Brook's Hampshire Sale.

C. A. Brook, Washington, Iowa, has one of the largest herds of Hampshire swine in the state. He sells a large number privately during the course of the year, but this summer he decided to reserve some forty of his best sows and gilts for a bred sow sale, which he will hold in Washington on February 5th. Mr. Brook has been an exhibitor of cattle and hogs at the International Stock Show for several years, and this year was particularly fortunate in winning a number of the most coveted prizes in the Hampshire show. In Mr. Brook's offering will be over twenty-five matured sows and of them thirteen were members of Mr. Brook's International show herd. There will be three gilts, sired by Good Deal and out of Sylva, the top sow in Mr. Davis sale last winter. Sylva was an undefeated sow in 1911. The important end of the sale will be these show sows, and they are all bred to Joe 7743, first-prize junior yearling boar at the International Stock Show in 1912, and before the awards were made many good breeders were predicting that he would win the championship. Joe is considered by many breeders to be a typical Hampshire boar, and with his strong individuality he is backed by a line of breeding that cannot be surpassed. His sire, Nissen's General Allen, sold for $500 at public auction last year and was shown at the recent International Stock Show and won second prize in the aged class. The breeder will be fortunate who can take home a sow bred to this grand young boar. J. E. Wright is consigning a few sows to Mr. Brook's sale and they are largely bred to Silver Tip Lad, a son of Sylva, champion under year sow in 1911. Fifty head will be cataloged for this occasion and every one a choice individual, practically all bred for March farrow. There will be thirty-two head of tried sows from the most fashionable lines of breeding, being sired by General Allen, an International champion; Gold Gem, Queen's Choice D., Missouri Boy and others of note. Parties who cannot attend this sale can send bids to Carlos C. Palmer, Homestead representative, in care of Mr. Brook, and they will receive careful attention. See page 48 and when writing for a catalog mention The Homestead.

Lonergan's Poland China Sale.

On February 12th D. C. Lonergan, will make his annual brood sow sale at Florence, Neb., at which time he will offer sixty head of Poland China bred sows. He is selling a grand lot again and among these are daughters of Big Victor, Big Tom, I Am Big Too and L's Quality. These will be bred to Big Victor, Guy's Price Last, Big Bob, L's Quality and King Giant. It is an offering that you will all be interested in if you want good Poland China bred sows. If your name is not on the Lonergan list for catalog, write him at once and kindly mention The Homestead.

White & Smith Invite Your Attendance at a Sale of

WHITE & SMITH, ST. CLOUD, MINNESOTA

J. T. R. NASH'S
Gold Medal Long Jumbo
POLAND CHINA BRED SOW SALE

Will be held in the sale pavilion in the city of

MINDEN, NEBRASKA
SATURDAY, FEB. 8th

40 Choice big sows will make up the sale, most of which are big spring gilts sired by the sensational breeding boar, **Gold Medal,** and bred to **Long Jumbo,** the highest priced son of Wade's Jumbo sold last year. Gold Medal is positively one of the greatest sow sires of the breed. His gilts comprise one of the very best bunches to be sold this year. Get the catalog at once. Look it over carefully. Get to this sale and be sure and get one or more of these sows. Send bids to J. C. Price, field man. H. S. Duncan, auctioneer. Mention Homestead and address

J. T. R. NASH, - Minden, Nebraska.

WRIGHT'S BIG-TYPE POLAND CHINA SALE

SALE WILL BE HELD AT THE FARM 3 MILES SOUTHEAST OF

ALLEN, NEBRASKA, WEDNESDAY, JAN. 29, 1913

50 HEAD of mammoth sows bred by myself from the biggest blood I could find. There will be included 6 matured and tried sires, 12 yearlings, and the remainder spring gilts from some of the best sows that I bought last year, together with those that I raised myself. This entire offering is big boned throughout and the gilts are smooth, the sows roomy and the sort that produce size in their breeding. The Wright's big-bone stuff is all characteristically large in bone, and they show him to be a breeder of the best. He is a half brother of Big Jumbo. Other herd boars are big Bone Jim by the well-known Barker boar, Lyon Chief; Big Chief; Big Wonder by Long Wonder 2d, and Long Wonder 2d. The ones of these that I now have on my place have been used on the sows in this sale and with such breeding you will be certain to find something to suit. Write now for the catalogs, as they are ready. Col. W. R. Ritchie will be the auctioneer. Mention The Homestead.

NEW CASTLE, NEBRASKA, THURSDAY, JAN. 30, 1913

36 HEAD of the best sort of brood sows, including ten tried sows, twelve fall gilts and fourteen spring gilts. They are by the following sires: Expansion Prince by Hadley's Surprise, Fair Chief by Chief Price 2d and Hadley's Mogul. For service boars there have been used Hadley's Mogul, Mastiff's Pointer and Valley View Jumbo, a son of Big Jumbo, he by the famous Big Jumbo. The combination of the blood lines used in this herd has been a judicious mingling of the big type and the more medium type, producing hogs that have retained the immense size of the big ones, coupled with that quality that marks the best. It is throughout an offering of the better order, and is worthy of the attention of the best breeders. The catalogs are ready. Write for one today. Col. W. R. Ritchie, auctioneer.

R. J. HARDING'S GREAT SALE

COL. GANO BRED SOWS

CARSON, IOWA, MONDAY, FEB. 3, 1913

40 HEAD--20 YEARLINGS, 10 MATURED SOWS, 10 GILTS--40 HEAD

COL. GANO, THE MOST SENSATIONAL SHOW BOAR NOW LIVING AND THE GREATEST SIRE FOR HIS AGE OF MODERN TIMES.

17 SOWS BRED FOR MARCH FARROW TO COL. GANO

THE Duroc Jersey breeding world proclaimed **Col. Gano** to be one of the **greatest boars seen at the fairs last year** and those who have seen his get admit he is one of the **greatest breeding boars now living.** Among the good things I am selling in this sale is a full sister to the great boar **Professor,** bred to **Col. Gano;** 4 daughters of **Chief's Protection** that were in 2d prize young herd at Nebraska State Fair 1912; also 5th prize senior yearling at Des Moines, all bred to Col. Gano; **H. A.'s Queen Again,** a fall yearling by Crimson Wonder Again and out of old H. A.'s Queen, bred for March farrow to **Col. Gano;** a junior yearling sow by **Orion Chief,** bred for March farrow to **Col. Gano;** 20 fall yearlings mostly sired by Chief's Protection; 15 sows bred to my great young boar, **R. J.'s Wonder,** a son of Crimson Wonder Again, and that greatest of all brood sows, H. A.'s Queen. I am selling a grand good lot of sows bred to the greatest boars in the west today. Catalog now ready. Write for it and mention Iowa Homestead. Address

R. J. HARDING - - MACEDONIA, IOWA

Cols. Kraschel and Reppert, Auctioneers. **M. T. White, Field Man for Homestead.**

Attention is called to the O. E. Osborn sale at Weston, Ia., on Feb. 1, and the W. H. Seddon sale at Persia, Ia., Jan. 31.

H. S. ALLEN'S GREAT SALE

CRIMSON WONDER AGAIN

BRED SOWS

CHARITON, IOWA, WEDNESDAY, FEB. 5

42 HEAD. 12 TRIED SOWS, 10 FALL YEARLINGS, 20 GILTS. 42

Crimson Wonder Again, Grand Champion Boar at Iowa State Fair, and the Sire of Over a Hundred Prize Winners.

I AM selling 12 sows bred to my celebrated champion boar, **Crimson Wonder Again**, and there will also be 8 of his daughters in the sale. There will be more of the blood of Ohio Chief and Crimson Wonder Again in my sale than has ever before been listed in one offering. There will be 20 granddaughters and greatgranddaughters of old Ohio Chief in my sale. It is a great offering, in fact, one of the best I have ever made. Catalog now ready. Write for it at once and mention The Homestead. Address

H. S. ALLEN, RUSSELL, IOWA

KREISCHER'S PUBLIC SALE OF BIG-TYPE

POLAND CHINA SOWS

AT

SUNNY HILL STOCK FARM

6 miles southwest of Mt. Vernon, on Chicago & Northwestern, and 4 miles north of Solon, on C., R. I. & P. Railway, on

THURSDAY, FEBRUARY 6, 1913

50 HEAD---12 Yearling Sows, 34 Fall Gilts, 4 Spring Gilts

7 Yearling Sows, 7 Fall Gilts, 1 Spring Gilt by the Famous 1000-lb. Mastodon Chief

5 YEARLING sows, 10 fall gilts and 3 spring gilts by the 800-pound TECUMSEH PRINCE, bred by W. J. Crow; 8 fall gilts by the 900-pound CHIEF JUMBO; 2 fall gilts by the 900-pound BIG BONE 2d, and 7 fall gilts by the famous son of Smooth Wonder 2d, THOR. The sows that make up the offering are deserving of more than passing notice, for they have the size and quality now so strong in demand, for the fall gilts have up to nine inches of bone, and the entire offering is in just nice breeding condition, and

ARE BRED FOR EARLY LITTERS

to four of the best big-type boars in the corn belt, which are Mastodon Chief, the 1,000 pound boar when in high flesh, stands on eleven inches of bone and has been at the head of my herd for three years; Big Jumbo 2d, a son of the famous boar, Big Jumbo, bred and raised by Peter Mouw, and weighed over 1,000 pounds at thirty months old. Nearly all of the Mastodon Chief sows are bred to this boar, and their litters will carry a combination of big-type blood lines that cannot be excelled anywhere. Surprise Chief, one of the best sons of the great boar, Tecumseh Prince, the W. J. Crow boar used for three years, and out of a dam sired by the 1,000-pound Long Chief; and Mastodon Wonder, a son of Mastodon Chief and out of the 900-pound Smooth Lady, one of the $100 sows in my last winter sale. Don't imagine that there are only a few good ones, and that they will sell high, as is often the case, and the balance very plain, for THERE IS NOT A CULL IN THE OFFERING, and this will be a rare opportunity to buy GOOD ONES AT YOUR OWN PRICE.

A cordial invitation is extended to all breeders and farmers and all lovers of the old kind of Poland Chinas with great size and bone, to be with us sale day. Sale held under cover. Parties from a distance will find free conveyance to and from farm, from both Mt. Vernon and Solon. Hogs to be shipped will be loaded on cars free of charge at Solon or Mt. Vernon. Send for catalog mentioning The Homestead. Send bids to C. C. Carlin, Homestead representative in my care

E. W. KREISCHER, MT. VERNON, IOWA.

Cols. W. H. Cooper, G. H. Burge and Theo. Martin, Auctioneers.

IMPORTED

HAMPSHIRE SALE

TO BE HELD IN THE TOWN OF

WASHINGTON, IOWA Wednesday Feb. 5

50 HEAD of excellent Hampshire bred sows, among them a number of International Stock Show and Iowa State Fair prize winners. Thirty-two of the sows are tried brood sows from the most fashionable strains of blood, being sired by General Allen 1061, Gold Gem 647, Queen's Choice D. 5015, Missouri Boy 1505 and other noted boars. With one exception these sows are in pig from the first service which shows the useful character of the offering. My sows are all bred to **JOE 7743**, the first-prize junior yearling at the International Stock Show, 1912, and was only defeated by the grand champion boar of the show. **Joe** is sired by Nissen's General Allen, the second-prize aged boar at the same show, and he also sold for $500 at public auction last year. Joe will make a great sire and you should get a sow bred to him if you want to breed Hampshires. J. E. Wright is consigning some good sows and gilts and they are bred to Silver Tip Lad 13085, a son of Silvia 16316, champion under-year sow of 1911. Two of her gilts also go in the sale. Every animal in the sale is bred for March farrow and are an excellent lot of individuals. Write me for catalog mentioning The Homestead. Fred Reppert, auctioneer.

C. A. BROOK, - Washington, Iowa.

J. O. JAMES'

BIG ORANGE OFFERING

BRADDYVILLE, IOWA, FEB. 7, 1913

50 HEAD Matured Sows, Yearlings, Spring Gilts **50 HEAD**

22 Daughters Big Orange, 10 Head Bred to Big Orange
3 Big Sensation Sows Bred to Big Orange

Nos. 1 and 2 will be litter sisters to the Elijah Story and Thomas Walker boars that topped my fall sales at $225 and $200, and they are outstanding good ones. I am selling a grand lot of gilts sired by **OTT'S BIG ORANGE**, and quite a few sows are bred to him. There will also be gilts by **Big Sensation, A Wonder Giant, Gritters' Best, Pawnee Nelson, and Long King's Equal.** Catalog now ready. Write for it at once and mention Homestead. Address

DROZ, HANKS & BISHOP DUROC BRED SOW SALE

TO BE HELD AT GILBERT'S FEED BARN,

FAIRFIELD, IOWA, THURSDAY, FEB. 6, 1913

55--HEAD--55

I WILL sell thirty head of great sows, eight yearlings by The Professor, Golden Model II., Jack's Friend, Proud Col., Chief Protection, Col.'s Defender and Chief Select; nine fall yearling gilts by Proud Col. and thirteen gilts by Crimson Wonder I Am, Proud Col., Model Wonder and Advancer. All but one are bred to **Cherry Chief**, the sire of Cherry King, **Chief Select, The Chief's Col.** and many others. If you want to raise you a herd boar buy a sow bred to Cherry Chief.

J. C. DROZ, - FAIRFIELD, IOWA.

WE are selling twenty-five head, mostly gilts, one Model Chief sow, one fall sow by Instructor (grand champion Illinois, 1910), four gilts by Proud Col., four by Model Wonder (and one of them a corker), four by Proud Ohio Chief, one by Highland King (junior champion International Stock Show, 1910), and ten by Col. O. by Proud Col., dam by Ohio Chief II., ten are bred to Model Wonder, nine to Wonder Model (second Des Moines, 1912), and six to Proud Col. Our state fair winners are bred like these litters will be. Buy some of these sows and raise some prize winners yourself.

HANKS & BISHOP, - NEW LONDON, IOWA.

Write to either for catalog mentioning The Homestead. Send bids to Carlos C. Palmer, care Leggett Hotel, and they will be properly cared for. Auctioneers, Cols. N. G. Kraschel and H. S. Allen.

O. E. OSBORN'S SALE

DUROC JERSEY BROOD SOWS

WESTON, IOWA, FEBRUARY 1, 1913

40 HEAD MATURED SOWS, YEARLINGS, GILTS 40

HERD BOARS—KING GANO, the top of the Seddon sale; VALLEY KING AGAIN, the top of the Barker Bros. & Crowell sale.

INCLUDED will be **Chief's Last Pansy**, one of the greatest living daughters of Ohio Chief, bred to King Gano; two **Model Critic** sows; two daughters of **Osborn's Prince of Cols.**; eight fall sows by **Osborn's Prince of Cols**; twenty-seven choice gilts by **Osborn's Prince of Cols.** and **Osborn's Chief Select.** A great offering bred to two of the greatest young boars living. Catalog ready. Write for it. Address

Col. N. G. Kraschel, auctioneer. M. T. White, field man for The Homestead.

Attention is called to the W. H. Seddon sale of Duroc Jerseys at Persia, Iowa, January 31st. Also R. J. Harding's sale of Duroc Jerseys at Carson, Iowa, February 3d.

R. M. SKILLEN'S SECOND SALE OF

DUROC JERSEY BRED SOWS

TO BE HELD AT FARM

Greene, Iowa, Monday, Feb. 10, 1913

40 HEAD of big, smooth two year olds, yearlings and gilts. There will be a good two-year-old sow by Kelly's Pilot Wonder (champion of Ohio, 1908), three by Waveland Ohio Chief, eleven fall yearling sows by Chuck's Model (a great son of Model Chief) and twenty-five gilts by Select Goods by Chief Select, Merfield's Wonder by Crimson Wonder Again, Waveland Ohio Chief by Ohio Chief and Chuck's Model. Their dams are by Kelly's Pilot Wonder, Waveland Ohio Chief and Adams Express. These sows are bred to Chuck's Model, Skillen's Col. Gano (a full brother to the noted sire and show boar, Col. Gano), Prince of Wonder by Crimson Wonder Again and a few to Advancer Chief by Model Advance. Write me for a catalog, mentioning The Homestead, and arrange to attend the sale. Send bids to Carlos C. Palmer, Homestead representative, in my care. N. G. Kraschel, auctioneer. Address

R. M. SKILLEN, - - GREENE, IOWA.

E. E. FARVER'S

EXCEPTIONAL POLAND CHINA BRED SOWS

OCHEYEDAN, IOWA, THURSDAY, JANUARY 30, 1913

40 HEAD ALL IMMUNE 40 HEAD

TRIED sows and gilts by FARVER'S GOLIATH, one of the greatest boars of this type in the very heart of the big-type country. He is not all size, but is smooth and well proportioned, and has gotten pigs after his own makeup. Some of the sows will be bred to him and will be the attractions of the sale. To cross on the sows of my own breeding I bought a boar by the Big Defender, out of Pawnee Belle by Dorr's Expansion, dam Evergreen Susie, one of Dorr's great brood sows. He is a boar of great promise and will grow to one of the real practical big smooth kind. Twenty-two gilts by Goliath in the sale and some more that are safe in pig to him. The rest have been bred to E.'s DEFENDER. Tried sows that have been exceptionally good breeders in my herd will be sold and one of the very choicest lots of gilts is listed for the above date. I would like to send you my catalog so you may judge for yourself the great lines of breeding I am selling. J. A. Benson, auctioneer. Ray L. Gribben, field man.

E. E. FARVER, - - - - OCHEYEDAN, IOWA.

When Writing to Advertisers Please Mention The Homestead

ROBINSON'S SALE OF

MAMMOTH POLAND CHINA SOWS AND GILTS

MARYVILLE, MISSOURI, WEDNESDAY, JANUARY 29, 1913

50 HEAD: 21 fine tried sows, 3 fall yearlings, 26 big, toppy spring Gilts 50

PAWNEE PETE 55115, one of the truly great 1,000-pound boars, is the sire or the grandsire of seventeen head. His dam, the great **Miss Corwin 2d**, is included. **Prince Ito 56611** and **Prince Tom 5616**, sons of the great Bell Prince, are sires of many. They are bred to **Prince Tom; Fred Jamison** by Pawnee Pete; **Montecello Boy**, a prize-winning son of Big Expansion, and **Spotted King** by Long King's Equal. All bred for size and quality and I know they will please you if you want big hogs that make good. All vaccinated with Missouri state serum. Send for catalog and note the best guarantee on mail bids ever put out. R. P. Hosmer, auctioneer. A. T. Cole, representing The Iowa Homestead. Address

ROCK BROOK FARM'S DISSOLUTION SALE OF 125 REGISTERED HOLSTEIN-FRIESIAN CATTLE

AT THE LIVE STOCK SALE PAVILION, UNION STOCK YARDS, SO. OMAHA, NEBRASKA, TUESDAY AND WEDNESDAY, FEB. 4 AND 5, 1913.

80 HEAD of registered cattle, consisting of forty cows 3 to 8 years old, milking or soon fresh, and 20 yearling and two-year-old heifers. These females are all bred to sons of either KING SEGIS, KING OF THE PONTIACS or DE KOL 2D'S BUTTER BOY 3D, three of the greatest bulls of the breed. Ten heifers under one year, some of them granddaughters of the above bulls. Ten bulls ready for service and all out of great producing cows. More A. R. O. blood in these bulls than any bulls offered in the West. Forty-five young high-grade Holstein cows and heifers, all milking or soon due to calve by registered bulls. Every animal over six months is tuberculin tested. The results of thirty years of careful breeding are represented in this sale. Catalog ready about January 25th and will be mailed only on application if you mention The Homestead.

HENRY G. GLISSMAN, STATION B, OMAHA, NEBRASKA.

POLAND CHINA SWINE.

COOPER'S GREAT BRED SOW SALE, HEDRICK, IOWA, FEBRUARY 4TH

AS USUAL, this offering is selected from our herd with the greatest consideration, to present to our visiting friends greater attractions than any preceding effort and we assure all comers one of the very greatest and best offerings of real big bred sows and gilts to go this season in the corn belt. We will include 25 head of 2-year-old and yearling tried sows, several fall yearling gilts and big, stretchy spring gilts weighing over 400 lbs. sale day. These sows are sired by such boars as Big Bone 2d, our present 860-lb. 2-year-old boar, Big Ex, Giant Look, Superior Look, Big Chief 2d, Chief Ideal, Chief I. X. L. 2d and other noted boars the catalog will give. They will be bred to Big Bone 2d, Big Expansion, a son of Dorr's Expansion, Chief Leader and Giant Chief. Send for our catalog. It will be interesting to you, in the big-type blood lines. Arrange to come and see one of the corn belt's best big-type herds of Poland Chinas and one of the most complete swine breeding plants. Mention The Homestead. Address

HORSES AND JACKS.

FRANK IAMS' 1912 IMPORTED HORSES

Iams and Peaches and Cream Percheron Paris Winners.

Ikey Buyer:—Get Into "Iams' Money Saving Game." See Iams and his "Peaches and Cream" Imported Stallions, "Prize Winners," that he sells at $1,000 and $1,400 (few higher). Imported mares—"Topnotchers"—at $700 and $1,000.

"Ikey," Be a "Wise Guy"—Buy 'Show Horses" of Iams—who has crossed the Ocean 50 times for horses and sold 4,444 Registered Horses. "Iams' 30 years of Success" make him a safe man to buy from at Special Low Democratic Prices. "Everybody Is Doing It."

Of big, classy, wide-as-a-wagon **"Peaches and Cream"** imported stallions and mares have arrived at St. Paul, Neb., by **"special train."** **"Ikey Boy,"** smile, and **Iams'** hundreds of satisfied customers **"will sit up and take notice"** that **Iams,** the **"King Bee"** horseman, is still in **"horse business,"** and **good for 50 years,** as the **"Peaches and Cream"** horseman. Iams **hypnotizes buyers with "real drafters"** at **bargain prices,** and having **"the goods"** as advertised. Iams' **"competitors"** and **"hammer knockers"** are **"boosting Iams"** by their **"knocks"** and making him on **"Easy street"** and known as the **"millionaire horseman."** Iams is selling these **big, fancy "Black Boys and Girls" cheaper** than ever before. Of more and better horses for the money—**$1,000 and $1,400** (few higher). Iams has

"100 PERCHERON AND BELGIAN STALLIONS AND MARES"

They are two to five years old, weight 1,700 to 2,500 pounds, 80 per cent blacks, 60 per cent **"ton horses."** All **"registered," approved** and **inspected** by **Governments** of **France** and U. S. and **certificates "stamped O. K."** All **sound," "bell-ringers" ("Iams' kind**—need no **"State Law"** to make **"them sound").** Many paris prize winners, **big flash actors.** They are **"eye openers"**—larger and better horses than you see elsewhere—big **"business propositions"** that make **"the wheels" work fast** under a **"live buyer's hat." "Georgie, dear," Iams,** the business horseman of 30 years' experience, made a **"big killing"** by buying his **100** stallions and mares in **France** and **Belgium** in October and November, 1912. **"War scare," "bad crops," "close money"** and **Iams' "cash"** caused the **"topnotchers"** and **prize winners"** to be thrown on **the market** (as the **best horses and prize winners** are not sold in Europe until the last part of the season). Iams will give his buyers the **benefit** of his **"good luck"** in buying. "Ikey Boy," come on down town—sing **Iams'** song—**"Everybody Is Doing It."**

BUY "TOPNOTCHERS of IAMS AND SAVE $1.000"

Iams is a "big fly in the ointment" in the horse world. He keeps the **"gang guessing."** His daily **"horse show"** will be a day of **"pleasure and profit"** and worth going 2,000 miles to see. Iams sells only **"topnotchers"** and **"crack business stallions"** and **"mares."** He handles no International **"tail ends," no "auction stuff"** or peddlers' stallions—no **American-bred** full bloods of **questionable breeding—(only imported horses). Iams** has the **"real pure drafters"** and makes every **statement good.** Buy of Iams and you won't get **"stung" in horse or price. "Dollie D.,"** waltz me around once again, **"Ikey,"** and land me at Iams' four importing barns and box office filled to the roof with **"Big Black Boys and Girls" at "reduced prices."** All the world knows Iams, the **big horseman,** who sells Iams' "Peaches and Cream" **"brand"** of **draft horses.** 1912 was Iams' **best business year.** 1913 promises to be a **"bumper year"** to Iams and his customers. He saved $300,000 to his customers in 1912. **"Watch his smoke"** in 1913. **Iams' 30 years of successful** horse business makes him a **safe man to** do business with.

HE SELLS HORSES "ON HONOR"--A BOY OR LADY

Can buy as cheap as a man. Iams is the **"square deal"** horseman. Buyers will find **every** statement in **his advertisement** or **catalog as** represented or you get the $500 **Iams** hang up. **Iams** guarantees to

SELL YOU A BETTER STALLION at $1,000 and $1,400

(few higher) than are sold to **"stock companies"** at $2,500 and $5,000. Imported mares $700 and 1,000. Iams gives 60 per cent breeding guarantee, pays freight on horse and **fare of one buyer.** He can furnish $1,500 insurance at **cost.** Iams **buys** and **sells every** stallion himself—saves buyers **all middlemen's profits.** He buys stallions by **"train load." He speaks the languages** (saving 20 per cent). He is not in **"stallion trust."** He pays no "slick salesman" commissions. He has no two to ten partners to share profits. He **pays cash** for horses and sells **"topnotchers"** by **"hot"** advertising and having **"the goods."** "Big Ikey," leave your happy home, December 20, 1912, or after, and buy a **"top stallion"** and pair of imported mares that bring colts that sell at $500. **"Papa,"** don't let those **"auction men" "hand you a lemon"** in one of those **"so-called" "American Full Bloods"** with questionable breeding. Buy an imported stallion or mare of **Iams** that is **"branded"** and you will **"wear diamonds." Iams' "selling clothes"** fit all buyers—you won't leave Iams without a horse. **He sells horses to all.** Write for Iams' million-dollar horse catalog. **Iams' guarantees** are backed by **"half million dollars."** References: **First National** and **Omaha National Banks,** Omaha; Citizens State, St. Paul, Neb. Iams buys big ad space because it is cheaper than flannel-mouthed horse salesmen.

Watson, Woods Bros. & Kelly Co.

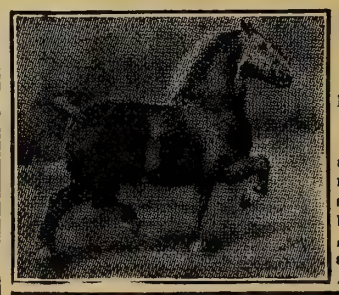
BOX 80 LINCOLN, NEB.

2 SHIRE MARES

One 8 years old and the other coming 3. Good big ones and well matched. One bred and sure in foal. Price very reasonable. 4 miles west of the Iowa Agricultural College. Thos. F. Kennedy, R. F. D. 1, Boone, Ia.

PERCHERON STALLION

in P. S. A., foaled June, 1910, wt. 1700. State certificate of soundness. C.W.Chandler, R. 4, Kellerton, Ia.



W. A. LANG & CO.,

Greeley, Delaware County, Iowa.

Importers of BELGIAN and PERCHERON STALLIONS and MARES.

We wish to announce to the buying public that we will now, as in the past, give you more good, sound, young horses for the money than you can get elsewhere. We do not advertise cheap stock because we do not think the best breeders want that kind, but we will sell you the good ones at as reasonable margin of profit as possible, and do a remunerative business. All horses are backed up by our GILT EDGE GUARANTEE. Write for full particulars. Large CALENDAR now ready.

PERCHERONS SHIRES BELGIANS

MAMMOTH JACKS AND JENNETTS

MORE THAN **$500,000 GIVEN AWAY!**

Sounds Like a *Mighty Big Statement*—
But This Is *Exactly What I Want to Give*

TO AGENTS! SALESMEN! FARMERS! STOCKMEN!

I am "MARSHALL" — E B Marshall
President, WILBUR STOCK FOOD CO., Milwaukee, Wisconsin

—and I want **you** to **KNOW** that **I** am going to **DO exactly what I say.** When I tell you that **I want to give away** this **enormous sum**—$500,000—or more—I mean **just that**—and I am talking about $500,000, or more, in **cold cash—good, hard United States money**—the kind that a man can **put in his pockets and hear the merry jingle**—or run through his fingers and admire the pretty **yellow backs of it.** Do you **UNDERSTAND, now**—I'm talking about **REAL MONEY?**

YOU CAN HELP ME in my **PLAN** to place **WILBUR'S STOCK AND POULTRY TONIC** on **every farm in your vicinity.** And **I can** and **will HELP YOU** get a **good, big slice** of this **$500,000 in cold cash**—and

You Don't Have to Invest One Penny!

I am not going to **stop, now,** to explain to you about **WILBUR'S GUARANTEED STOCK AND POULTRY TONIC. Every stock-raiser and farmer in the country** knows that it is the **best conditioner, feed-saver** and **disease-preventive** and **system-regulator** in **America** for cattle, hogs, horses, sheep and poultry—if he feeds live-stock for **profit, at all.** I am not going to tell **you** more about **that**—because, while that's **all well and good,** what **YOU WANT TO KNOW** is

HOW YOU GET YOUR SHARE OF THIS $500,000. OR MORE

—and that is **why** I want you to

SEND ME THE COUPON BELOW AT ONCE!

I HAVE A PLAN! I am not going to give you the **particulars, here. I haven't space to do it.** And I want you to take enough **interest** in getting **a nice, big chunk of this**

REAL MONEY to **write me** and ask me **just what my PLAN and PROPOSITION are** **TO YOU!**

I'll just give you a little **"tip,"** though—here—that will get you started to **thinking.** And I believe you **will** think, and **think hard**—and **right**—that here is **one great, big, glorious opportunity** for **YOU** to

Help Yourself To a Generous Slice of This $500,000

—or more. There was **nothing ever more TRUE!**

I AM GOING TO ORGANIZE FIVE HUNDRED WILBUR STOCK AND POULTRY TONIC CLUBS!

I am going to spend **as much as $1,000** on **each Club.** Think what **that means** —to **YOU!** Getting **interested, NOW—aren't you?** If you're **NOT, you ought to be. Money talks**—and here's where it **talks Loud**—and it's **talking** to **YOU!**

YOU Help ME on This CLUB PLAN and YOU Have The OPPORTUNITY To Make Thousands of Dollars in Cold Cash, for Yourself

Now—**all you've got to do**—to know **all about** this PLAN—and **what I am GOING TO DO,** and **my proposition** to YOU—is to **sit down and fill out the** COUPON at **corner of this Announcement,** and MAIL THAT TO ME—E. B. Marshall, President, WILBUR STOCK FOOD COMPANY.

Now, **remember:** that is ALL you've got to do—to know **everything** about **my** PLAN and **proposition,** and how YOU can get **your generous share** of this REAL MONEY that I, E. B. Marshall, am willing to **give away** to people just like YOU. You **don't** have to order ANYTHING. You don't have to send me ONE CENT **of money.** You don't have to **involve or obligate** yourself in **any way,** to **anything. Just simply fill out** the COUPON **and** MAIL IT. THAT'S ALL. Costs you **two cents** to do that. Better **do it:** TODAY. A liberal chunk of this $500,000, or more—ought to be just as acceptable to **you** as to **anybody else**—HADN'T IT? If you **want it**—**GET BUSY! I'm** not going to WAIT—and **you** CAN'T AFFORD to wait. RIGHT NOW, is the TIME, the PLACE, and the BIG PROPOSITION.

E B Marshall
Pres. Wilbur Stock Food Co.
Dept. C Milwaukee, Wis.

$500,000 DISTRIBUTION COUPON

E. B. MARSHALL, President
WILBUR STOCK FOOD COMPANY
Dept. C Milwaukee, Wis.

Please send me particulars of your **FREE $500,000 DISTRIBUTION.** This does not obligate me in ANY WAY

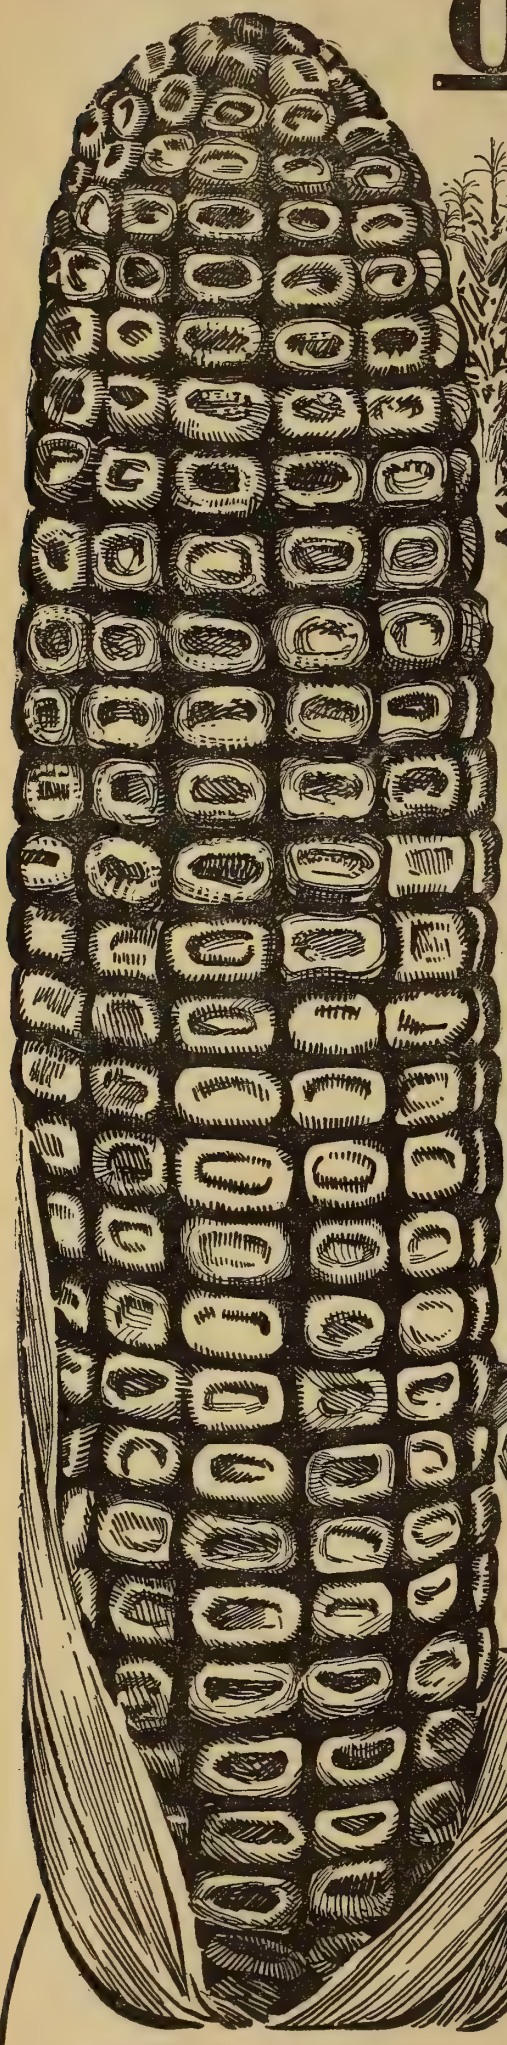
The Iowa Homestead

VOL. LVIII. NO. 5 DES MOINES, IOWA, JANUARY 30, 1913. WHOLE NO. 2886.

The New Corn Country On the Louisiana Gulf Coast



Look to the *South!* Louisiana has given the country a *new corn belt.* She offers a future of untold wealth to you Northern farmers if you will go down there *now* and work that *black, rich Gulf Coast soil.*

This land yields corn which cannot be surpassed in any other section of this country. The quantity and quality insure a bigger return than you are getting out of your Northern acres. Eight weeks after Louisiana corn is planted it is at the roasting ear stage. That's the magic of the warm, life-giving Gulf Coast climate.

It's the most fertile soil in the world. It gives *you three crops* instead of *one*—three incomes instead of *one.* There is a big corn crop and two other profitable crops from the *same land,* the *same year. Crop time* is *all* the time.

You can purchase this land of year-round *harvests* for as low as $10 an acre, and for $25 an acre you can get soil that is selling for $125 right where you are *now.* This *land bargain* will not *last.* Prices are already beginning to rise. The low price is due to the fact that until recently proper transportation facilities were lacking. Today you can transport your products as speedily and as safely as in the North at greatly reduced rates. Think this proposition over *now.* Act before it is too late.

Your Farm Loafs a Third of the Year---the Gulf Coast Farm Works Twelve Months

That Northern farm *loafs a third each year.* It is idle *all Winter.* It eats up the profits of the *one season* harvest. You are being *cheated* by the *climate.*

The Gulf Coast farm *never* rests. Every day it yields *more dollars* to the man working it. There is *no heat* to *parch, no cold* to *freeze* the products. In this section the temperature rarely goes above 90 degrees in Summer or below 40 degrees in Winter. The mean annual temperature ranges close to 70 degrees according to the government records. This wonderful, balmy climate is *always* giving life to something—money to you.

What Successful Farmers Say About the Gulf Coast Land

The Gulf Coast country has made men like you free, happy and *rich.* Men just like you went down there and *succeeded* beyond their fondest hopes. These neighbors like men want *you,* farmers to work *all the land.* What they have *done you can do.* They have fat bank accounts—you can have the same.

J. B. Hill, of Raceland, La., writes:

"I came from Findlay, Ohio. I have been on my present property for two years. My family consists of myself, wife and nine children. My doctor's bill in two years has been $35.00 gross; a large percentage of this has been due to minor accidents to my children.

"We are all in the best of health, and think most well of this country. My wife was an invalid when we came South, but has hardly been sick a day since we landed in Louisiana.

"We have 147 acres; 135 in cultivation, 130 of this in corn that will easily run 65 bushels to the acre. My highest test was 83 and my smallest 67 bushels. Following a crop of garden truck, I have harvested a crop of peanuts."

Best Corn Land in World

Dean Funk, largest corn grower in Illinois and president of Funk Bros. Seed Co., Bloomington, writes:

"In the Louisiana Delta the Northern corn grower will find his Utopia. No soil in the world contains more of the elements essential to the maximum crop of corn. Once the northern man is shown the country and its productiveness there is no question but that he will buy land here and bring many of his friends to share in the bounty which is so evident on every hand."

Three Crops in One Year

Three crops in *one year.* That's the rule, not the exception, in *this* country. In February you can plant a profitable crop of potatoes. Then comes your corn and a *splendid profit.* Then you can work that same land again and raise potatoes or stock beets. These beets yield 10 to 30 tons an acre.

Raise High-Priced Products of the South

Besides the Northern products you can make a big income from cane, cotton, rice, pecans, oranges, tobacco, alfalfa and lespedeza.

This is the Young Farmer's Chance

Don't be handicapped by the climate as your fathers were. Go to this marvelous country NOW. You can buy this fertile land *cheap* and be independent. It's the best climate in the world. Electricity, the telephone, rural delivery and schools are there for you. You can enjoy the warm hospitality of the South of which you have read.

You farm this land as you farm the land up North. You won't have to work half as hard. Your returns will double.

This Isn't a Boom—It's a Development

This Gulf Coast country is not a boom. It's a natural development. Every inch is fertile and awaits you. The new main line of the Frisco has given excellent transportation facilities.

Get the Value of the Panama Canal

The Panama Canal will make New Orleans the greatest shipping point of the South and West. It will create a tremendous market for Gulf Coast products. This is another big advantage if you purchase a Gulf Coast farm.

Look the Country Over Before You Buy

This is the one big chance of your life. Don't delay. The prices are going to rise. The cost of an inspection trip is low. Round trip tickets sold first and third Tuesdays of each month, via Frisco Lines. Price from Chicago, $37.50; St. Louis or Kansas City, $32.50 or less.

Success With Consolidated Schools

How Buena Vista County, Iowa, Has Tried the Experiment With Splendid Results.—*By County Superintendent J. A. Woodruff.*

HARDLY a week passes but there is at least one letter of inquiry which comes to my desk asking about the consolidation of schools in Buena Vista county, Iowa. The increase in the number of inquiries gives evidence of a widespread interest in rural schools and

CLOSED BUSES TRANSPORT THE CHILDREN IN WINTER.

a desire on the part of the people to secure better school conditions for the children of our farm communities. Of one thing I am convinced, and that is, that the people of the grain belt are becoming interested in their rural schools. They are becoming awakened to the need of a better condition. They know that something should be done. Many are simply waiting for something to turn up. Others have reached the anxious stage and they are beginning to investigate. It is from these people that letters are being received. All manner of questions are asked and those found most often are, "How many consolidated schools have you in your county?" "Is consolidation a success?" "Has it increased the taxes?" "How about transportation?" "Are people afraid of it, especially for the smaller children?" and a hundred and one like questions. I recall one letter, in particular, of two typewritten pages, all questions. The best way to meet these is to tell of conditions as they are and let people judge for themselves.

There are in Buena Vista county three consolidated schools. One at Marathon, which embraces an area of twenty-four sections; a second at Newell, of twenty-eight sections; a third at Truesdale, of sixteen sections; while just over the line in Clay county, and adjoining the Marathon district, are two more, making in all, five consolidated schools within a radius of fifteen miles.

The first of these schools was started at Marathon in 1903. It will not take a scholar or a philosopher to figure out that had the people at Marathon not been satisfied with the system, the other schools would never have been started. But what was true in this instance is nearly always true. It is in those locations where consolidation is best known that it has made greatest progress.

Many suppose consolidation to be a new thing, but this is far from being the truth. The first school of the kind was started in Massachusetts more than forty years ago and today Massachusetts is spending nearly a third of a million dollars for transportation, while Indiana is a close second with something like $300,000. According to government report, not one of more than 1,800 schools of this class that have been organized and fully established has ever gone back to the old system.

The story of consolidation in Buena Vista county can best be told in the story of the school at Marathon, the reason being that the school is older and has had a longer period for development. The building is of pressed brick and cost about $20,000 when erected, but would cost half as much again if it were built today. It is divided into three compartments by fireproof walls, and is modern in construction throughout. The heating and ventilating system is equal to that found in any of our best city schools. A fan in the basement forces a stream of fresh air over the furnace into the rooms and out through an opening in the tower. The lighting is perfect, and poor lights, which have been the source of much irritation to weak eyes, with accompanying headaches and unlearned lessons, are unknown. The seats are suited to the size and comfort of the pupil and when one enters this school he finds no child perched on a seat four sizes too large for him and feet dangling six inches from the floor.

The faculty are, and always have been, either normal trained or teachers possessed of a rich and successful experience. From the time the school was organized until the present, each succeeding year has seen some change for the better in its courses, until today the school offers, in addition to the regular academic subjects, agriculture, domestic

SOMETIMES THERE IS A BOBSLED RIDE TO ADD ZEST TO SCHOOL GOING.

science, manual training, and a teachers' training course.

The transportation system includes six enclosed wagons or buses that bring nearly 140 children from the surrounding farm homes each morning and return them in the evening. A few of these children must ride seven miles or more and start quite early in the morning, but this is the exception and not the rule. Four years ago when investigating as to how far children must travel, I found that of the 127 pupils transported at that time less than ten were obliged to travel more than four miles. The question is often asked, "What is done in case of bad roads?" In case of very bad roads caused by either mud or heavy snows, the buses do not run. The schools are closed to the children of the town, as well as to those in the country. In this way classes are kept together and all children are treated alike. But to close the schools because of bad roads is not often necessary. A worse condition than existed last winter can hardly be expected or imagined, but with all the bad weather, there were but four or five days that the buses could not run. When they were blockaded, the trains were blockaded, and often the bus roads would

A "SURE THING" FARM POLICY.

A Kansas subscriber points out the advantage that comes to the man who adopts a diversified cropping system and in addition keeps sufficient live stock to consume the greater part of the grain and roughage raised on the farm. Among other things this subscriber says:

Farmers are making a great mistake in the one or two crop method. Diversified crop raising and stock raising should be, and sooner or later will be, the farmer's slogan.

Better tillage of the soil is necessary, and cannot be well done when the one or two crop method is used. Unfavorable weather and an immense amount of work coming all at once, is the cause of slack methods in tillage. Should even four or five different crops be raised, more time would be had to properly prepare the ground for seeding. It is necessary that the soil be thoroughly prepared before seeding. No matter what the crop is, a poor yield surely will follow improper preparation. If twenty acres were sowed to winter wheat, twenty to oats, ten to barley, twenty seeded into hay meadow, two or three to potatoes, thirty to corn and thirty to pasture, there would be a variety—no two needing attention at precisely the same time, thus scattering the work throughout the entire year. There would be no excuse for poor tillage and such light yields as is common. If one crop failed, some of the rest would succeed, and some income at least would follow our efforts each year, even though drouth would hit us. The rotation of crops would help maintain the fertility of the soil, and make plant food more available. Intelligent, systematized, mixed farming would save much of our moisture that now passes off as vapor.

Farmers are selling the vitality of their land in the form of grain and roughness. Indeed, far too much of this is done. Raising crop after crop of alfalfa, sometimes five crops annually, and selling on the market, surely reduces the productiveness of land producing it and in a short time will cause such land to be a barren waste.

The constant raising of crops on land, no matter how rich, will in time practically be the ruination of such soil. The solution is rotation of crops, raising hogs, cattle, horses and sheep to such an extent, if possible, as to eat the most of the crops raised, and all the fertilizer and waste be returned to the land producing it.

With proper care and attention, most always there is a living profit to be made out of raising live stock, and the future welfare of ourselves, our children and our children's children, demand that this be done.

If we do not like to handle live stock it matters not, we must handle them. If we are good to them, they will like us, and we will reciprocate and before we know it we will like them. Nothing in agriculture is more satisfying than to have a variety of good crops in abundance, with just enough fat sheep, hogs, calves, cattle, colts and horses to eat up all we raise without any being wasted each year. These are cashable products, easily gotten to market, and your land will grow better and better, as well as you will grow more and more prosperous each year.

This is the ideal way, the sure way, and the only sane way to farm.

No one will take issue with us when we say that the system commended by this subscriber belongs to the "sure thing" class. Theoretically it is ideal and we would be better off if this idealistic conception could more rapidly find its way into common practice. Many a grain farmer finds that his crops are growing a little less each year and yet for lack of capital he is unable to change his methods. To him foundation breeding stock looks exorbitantly high in price so that he goes along year after year with but one particular goal in view, namely, to desert the land and join the great body of consumers. Where a sensible system of live stock raising can be once started the whole situation may be saved and the soil instead of going back in productiveness may be gradually made more responsive, leading ultimately to a more substantial prosperity and a permanent home for the individual who has wisdom enough to carry out this policy.

TANKAGE AND OIL MEAL FOR PIGS.

An Illinois subscriber gives his experience in feeding oil meal and tankage to brood sows, in the following communication:

I am often asked why I feed tankage and oil meal when they are the highest-priced concentrates I can buy on the market for hog feed. My first and best reason is because I have nothing better and can get nothing that will return me as much for the dollar invested. I raise quite a lot of soy beans which make an excellent feed to balance up corn, and the hogs like them, too, but as they sell readily for over $2 per bushel wholesale, I can hardly afford to feed any except the cracked and unmarketable ones. These do not go very far with 100 to 200 pigs a year, so I must look elsewhere for my protein, especially in winter, as I raise two litters of pigs a year and the fall pigs must be carried through the cold weather.

Several years ago I fed ground oats, corn and oil meal and the pigs did exceedingly well on this together with ear corn, despite the fact that some folks say oats are not a fit feed for pigs. I believe the oil meal counteracts the irritation caused by the oat husks. Oil meal comes the nearest to taking the place of grass with young pigs of any concentrate I know of. It keeps the bowels loose, thus sharpening the appetite and giving a soft, mellow appearance to the hair and skin. Oil meal is not good to feed by itself, but should be mixed with other feed in the form of slop, and don't feed too much.

Three years ago I wintered 110 fall pigs and did not lose a single pig the entire winter. I was feeding ground barley, oil meal and corn and most of the pigs did well, but seventeen of the smallest ones quit eating anything but a little ear corn. They were not fit to sell when the others went to market. I began slopping them with oil meal and tankage made into a slop about the thickness of cream, feeding about five gallons of this twice a day. In a week these pigs were acting like new creatures and in two weeks they were ready to take corn enough to begin to thrive and they made even nicer pigs than the best of the lot sold earlier.

Like all other farmers during the rush of fall work I neglect the fall pigs until they begin to show signs of unthrift or even sickness. At such times nothing equals slop made of oil meal and tankage. Last fall I had a few young brood sows that had been left with the fattening hogs too long and at mating time they were too weak in their legs to hold up a young male hog. They would lie down and squeal and I thought them ruined, but I cut down their rations to one ear each twice a day and slopped them twice a day. Within a week they seemed brighter and more active and by the time three weeks had passed they were as strong for service as old sows. It seems almost incredible the great difference feed and care will make. One feed will not do it, it must be continuous.

For eighty-five fall pigs weighing from fifty to 100 pounds each I mix five to six quarts of oil meal in the slop pail with hot water and let it stand about twelve hours, or until the next feed, then put in about the same amount of tankage, adding enough water (or milk if you have it) to make twenty or twenty-five gallons. This will give the pigs about a quart apiece. They like it and do not seem to tire of it, either, as they do other feeds. I feed this same mixture to brood sows, but I am careful not to feed too much oil meal to pregnant sows or they might lose their pigs. I feed about one quart to ten or twelve sows and have never had any bad results from its use. Eleven sows that were fed oil meal with other food all winter farrowed me 123 pigs and started 111 of them. Ground oats may profitably be added to the above for all kinds of hogs, but I can see no value added to corn from the grinding.

We believe that every farmer who has had experience in the use of foods rich in protein like oil meal and tankage will endorse the views of this subscriber. We have always favored the plan of using a little slop not only for brood sows, but also for fattening hogs, our theory being that slop aids in the digestion of dry food and where material like oil meal or tankage is used in sufficient quantities the effect is to balance the ration. The results obtained by this subscriber will justify every man who is feeding his sows largely on corn in following this good example. It requires good feeding and good management to start off 111 pigs from eleven sows and the methods employed in bringing about that result may be safely copied.

THE CONSOLIDATED SCHOOL.

It is extremely interesting to note the importance which recently inaugurated governors attach to agricultural subjects in their inaugural addresses. County farm experts, good roads, appropriations to check hog cholera, the consolidation of rural schools and social community centers all come in for general discussion. Men who have been elevated to the highest office in the state are no longer contenting themselves with talking glibly of the tariff, the trusts and various national issues, but are getting down to practical details of the state problems. It is an encouraging sign, from which we may take hope for the dawning of a brighter day in the agricultural sections.

Of all the recently inaugurated governors none were so emphatic in their declaration of interest in the farmer's welfare, or so specific in their program for farm betterment, as Governor Clarke, of Iowa. And of all the good things recommended in Governor Clarke's inaugural address none is so alluring or so full of possibilities as the new rural school which he pictures. Governor Clarke was born on a farm, he was educated at a country school. He knows how rural conditions of yesterday compare with those of today. And yet, while Iowa farmers are living in houses vastly superior to those in which they lived forty years ago, while they are lighting these houses with gas or electricity in place of kerosene lamps and candles, still the old schoolhouse survives, a remnant of the "tallow dip" days of the frontier. The district school of forty years ago, with its attendance of forty pupils, has declined to the school of ten children and even fewer today. Gone are the enthusiasm of numbers, the inspiration of companionship. Prosperity in the homes and the barns has not brought prosperity in the schools, and it is high time something was being done. Governor Clarke makes this excellent suggestion in his inaugural address:

The consolidated school with its work in all the grades, it seems to me, could be maintained at a less expense than the nine schools of the townships as now organized. In place of the little cheerless schoolhouses, poorly equipped, with no modern conveniences, have one three to five-room building centrally located, with an up-to-date system of heating, lighting, ventilating and water supply. Here there could be some inspiration for both teacher and pupil. Here would be the stimulus, excitement and interest that come from numbers. Here would come relief from the monotony and loneliness of the teacher with her half dozen little children by the daily association with other teachers. Here could daily come the refining influence of music and song. Here would come the daily supervision, management and inspection by the principal of the school. The grounds should include three or four acres for reasons that your mind will readily suggest. The school building could easily become the social and intellectual center of the community. Here could be public gatherings, lectures and entertainments of all kinds. No one would be far from it in this day of the automobile and in the era of good roads upon which we fervently hope we are entering. Away from the diversions of the town it would be an ideal place to lay the foundation of sturdy character, intellectual and physical strength and useful citizenship in the young men and women of Iowa. In this direction the consensus of opinion of the competent men and women who have given the subject earnest and sympathetic study, lies the solution to a considerable degree of both the country school and rural life problem. This cannot be brought about by compulsion. I fully realize that. I wish, however, that a plan could be devised by which any township could voluntarily consolidate her schools and that such plan could be enacted into law at this session. If the township as a unit be thought to be too large, then a smaller territory might be taken as a basis, but it seems to me the township is not too large. Of course regard should be had for the course of rivers and streams through townships.

We have had prepared for us an article by the county superintendent of an Iowa county in which the consolidated school experiment has been tried out most successfully. The article should be an inspiration to others. Its publication in these columns this week should be a clarion call for other counties to get busy. Nothing so much stands in need of practicalizing, or revolutionizing, as the public school system. The start must be made in the district schools in the country. The sooner the start is made the quicker will the good results be forthcoming. We urge upon all our readers a careful study of Governor Clarke's suggestion and an even more careful study of the consolidated school idea, in which the greatest hopes now seem to rest.

A YEAR OF GOOD READING.

These long winter evenings are admirable for the enjoyment of our exceptionally attractive Red Letter Subscription Offer. Not a member of any farm-household but can find plenty of good, entertaining reading matter with which to while away the hours. The combination consists of The Iowa Homestead, Kimball's Dairy Farmer, The Woman's World, Kansas City Weekly Star and People's Popular Monthly. These five papers may be secured from us at practically one-half the regular price and will make the whole year full of the best, most practical and entertaining reading matter possible to procure. Do not delay, but take advantage of the offer at once. Remit $1.25 to The Iowa Homestead, Des Moines, Iowa, and the five papers will be sent to you one entire year. Write your letter at once; the offer is an exceptionally good one.

VALUE OF EXERCISE TO BREEDING STOCK.

Too much emphasis cannot be placed on the importance of exercise for breeding stock. We have little trouble as a rule with cattle in this respect in the corn belt as most of them are raised under what might be called field conditions. The same is more or less true with brood mares, but when it comes to hogs and our poultry the wisdom of the average man's policy might well be questioned. A Missouri subscriber expresses his views on the subject in the following communication:

But little, if anything, need be said concerning this subject, to the observing successful breeder. However, the young farmer not accustomed to doing everything may appreciate a hint along the line of the great value of exercise to breeding stock.

Poultry fanciers realize that the eggs of birds which do not exercise plentifully will hatch poorly, if at all. After the fowl hatches it is weak and likely dies in a few days. To raise poultry successfully it has been learned that both male and female must have a "lot" of exercise.

Successful swine breeders have learned that to have good, strong, healthy pigs at birth the male should have plenty of exercise so as to keep him vigorous, and the sow should be compelled to rustle enough to keep her vigorous, even if this exercise is compulsory. Sows fed too heavily become fat, and "satisfied," and a "satisfied" sow is not a good brood sow. She should be fed just enough to keep her vigorous, but not enough to cause her to "cease her wanderings." Failure follows the fat, lazy sow, and no success can be derived from her as a brood sow. Many there are who remember the weak pigs of early March and April farrow of last spring. This was almost entirely due to the very heavy snow that lay on the ground for weeks and prevented the sows from taking the necessary exercise. Constipation is another evil which deranges the system of brood sows. This, too, is greatly overcome by sufficient exercise.

Insufficient exercise in the stallion, as well as the brood mare, is the cause of weak foals and scarcity of foals in the corn belt. The stallion should have regular exercise and breeders should refuse to breed mares to a stallion that the manager fails to give his daily exercise. On the range where the male and female run at large the foals secured are almost 40 per cent higher than in the corn belt where the stallion is kept in a small, highly fenced lot.

This condition is partially due to the grass feed on the range, no doubt. But exercise is a potent part of the success on the range, nevertheless.

We would like to place special emphasis on the importance of exercise as it pertains to brood sows. If the average sow is fed sufficient good food to keep her in fair condition of flesh, she is inclined to get lazy and for that reason she will not of her own accord take sufficient exercise. We urge all our readers who are raising swine to make it a point from this time until farrowing date to turn the brood sows away from their sleeping quarters during several hours each day. This will make the difference in most cases between success and failure. Weak pigs always result when a sow is allowed to move at will during the gestation period, while we have never known an instance where weak pigs were farrowed when the sows were compelled to rustle for their living.

ECONOMICAL FEED FOR BEEF COWS.

The Iowa Experiment Station has for many years been using ensilage extensively for all classes of live stock, especially good results having been obtained in the use of ensilage and hay alone as a ration for beef cows during the winter. In a recent bulletin on the subject it is pointed out that the feeding of the breeding herd of beef cows during the winter months must be governed by the condition of the cows at the time of going into winter quarters. If the cows are dry at the beginning of the winter they must necessarily be fed somewhat differently than if nursing calves.

Assuming that the cows are in thrifty condition after the calves are weaned in the late fall, and that they are to drop calves again in the early spring, the feed should be such as to keep them gaining until this time. For cows in such condition corn silage may make up the greater part of the ration and will be found to be one of the best feeds available. It should be supplemented with such other roughages as alfalfa or clover hay and corn stover or oats straw. For the dry cows a ration of thirty to thirty-five pounds of corn silage, five to eight pounds of clover or alfalfa hay, together with what corn stover or oat straw they will eat, will prove very satisfactory. Such a ration should keep the cows gaining at the rate of more than one pound per day.

If the cows are nursing fall-born calves, silage will so stimulate the milk flow that larger and more thrifty calves will be the result in the spring. Some concentrated feed should now be fed in conjunction with the silage. Cottonseed meal, one and one-half to two pounds per day for each 1,000 pounds live weight, together with the silage and other roughage, makes a very satisfactory ration. Oats (at the present prices) can well be used in the ration. By the liberal use of silage the cost of wintering the breeding herd of beef cows can be cut down nearly one-third; also the cows will come through the winter in better condition.

SELLING CORN FOR LESS THAN IT IS WORTH.

The following communication is from Rex Beresford, superintendent of the work of the Iowa Beef Producers' Association:

Three weeks ago in a little town of 700 inhabitants in west central Iowa I counted eighty-four teams in town at one time with corn for the elevators. I was told that in the neighboring town of 1,500 people 120 farmers had unhitched their teams the night before and left their loads of corn standing in the street over night because the elevator machinery had broken down and could not unload the wagons. The elevators were paying thirty-five cents a bushel or about $17.50 a load.

Corn marketed as live stock at that time, whether as beef, pork, mutton or dairy products, would have brought from 75c to $1 a bushel. There are uncertainties in steer feeding when feeders are as high as they are now and there is so little margin or prospective margin between cost of feeders and prices of finished cattle. There is mighty little uncertainty, however, in a sixteen to twenty-month-old steer grown and fattened on the farm that produced the steer and the corn. Such a steer would have paid and is paying on the few farms where he may be found, from eighty cents to $1 a bushel for the corn that is being fed to him. There is no hauling to market, either; no waits to unload at the elevator or extra man to keep to haul off the crops.

Another thing: At present market prices for fertilizing materials such as are being bought for many eastern farms, and some not so very far east, either, a dollar's worth of thirty-five-cent corn contains about forty-two cents' worth of fertility. A dollar's worth of beef selling at $8.50 a hundredweight contains about five cents' worth of fertility. From the standpoint both of bigger profits and of keeping up the productive power of our farms we need to feed our crops into live stock of some sort and put the manure back on the land.

Steer feeding may be risky. There is mighty little risk, though, in growing and fattening calves produced on the farm. At present prices for feeds there is and is likely to be for a long time to come a good profit in keeping beef cows, raising their calves and feeding them out at as early an age as possible.

Yet in one of the towns mentioned, where corn was being marketed so rapidly, two car loads of good red cows, capable of producing first-class beef calves if bred to a bull of the right beef type, were standing in the yards waiting to be loaded out for Chicago for beef. Their owner was attracted by the comparatively high prices for butcher stuff, and his neighbors could not see that the cows could not possibly be worth for beef what they were worth to stay on their farms and produce more beef for future good prices. Some men are waking up to the fact that there will be money in good cows from now on. A lot of others will be wishing during the next three or four years that they had picked up some of the cows now going to market at a time when they could be bought for market prices.

These are facts to be pondered over by the man who is hauling his fertility to the elevator in the form of corn. One statement made by Mr. Beresford should be burned into the heart and conscience of every farmer in the central West, namely, that every dollar received for corn that sells at thirty-five cents a bushel must be discounted forty-two cents because that amount of fertility is taken away from the farm with the corn.

ANOTHER VIEW ON SWEET CLOVER.

A subscriber from Polk county, Mo., gives his views on the economic value of sweet clover in the following communication:

A neighbor disgustedly threw down the farm paper he had been reading, with the exclamation, "Some of these writers are the biggest liars unhung! Here one of them says that sweet clover is a valuable forage and pasture plant. Now, I know that's a fake, for there is some all about the old quarry at the back of my pasture, and nothing will touch it, not even the sheep."

Now, the Psalmist said, "All men are liars," but I also believe that there is some truth in most of them. I do not exactly agree with my neighbor, yet the facts bear him out in the statement that his stock would not touch sweet clover. When I read half a dozen articles from as many farmers throughout the country, some holding that sweet clover was a valuable crop, while others condemned it as a noxious weed, I concluded that there must be two ways of looking at the proposition, and that the viewpoints were diametrically opposite.

I went to work with the purpose of finding who was right, and I find that both sides had some grounds for their views. In this part of the country sweet clover is universally considered worthless except as bee pasture. This is because it has never been handled in a manner to produce satisfactory results. Where red clover or alfalfa can be grown, there is no necessity for growing sweet clover, since it is inferior to either as forage or pasture; but in localities or on land where the other clovers cannot be successfully grown, it can be made a very profitable crop.

That there is a place in the economy of farming for sweet clover goes without saying. It is a valuable plant for the enrichment of the soil, is a tolerable pasture plant, and for hay is surpassed only by the more desirable red clover and alfalfa. If it is to be used for pasture, stock are to be kept on it from the time it starts in spring, so that the clover is kept down and not allowed to become woody. For hay it is cut before the bloom buds appear, two or three cuttings made each year. Like some other feed, stock will not like it till they become accustomed to the slightly bitter taste, after which they eat it readily with gratifying results. In order to induce stock to eat it at first, salt thrown over the hay as it is stacked or put in the mow will add to its palatability.

The regular sweet clover with white blossoms is a biennial like red clover, and the seed should be sown in the spring. If it is desired to eradicate sweet clover it may be done by not allowing it to seed for two years. There is another kind that is called sweet clover, and which is smaller and more palatable to stock than the regular variety. This has a yellow flower, and is an annual. In preparing ground for sweet clover it is possible to make it too loose. A hard, clean seed bed like clean corn stubble that has been harrowed, but not plowed, is more likely to give a good stand of sweet clover than if prepared as for grain or red clover. Since many of the seeds are unusually hard, and will not germinate the first year, it is well to sow fifteen to twenty pounds to the acre.

There will not be much growth the first season; possibly a late cutting or pasture. However, the weeds should be mowed and the clover not allowed to grow higher than six inches. If pastured the second year there will likely be enough plants that seed to reseed the land, but if cut for hay, the last crop should be allowed to seed, then mowed just before frost.

The hay from sweet clover is harder to cure than either red clover or alfalfa. It is best to cut in the afternoon and allow it to lie all the next day, then rake and put in shocks early in the morning while damp. All the handling should be done in the morning so that the leaves will not shatter. The stalk contains a great amount of moisture which must be dried out before the hay is put in the stack.

While this subscriber is of the opinion that red clover and alfalfa are superior to sweet clover and while we believe that the great majority of the farmers of the corn belt will support this contention, yet it is true that men can be found who regard sweet clover as superior to either of the other legumes. While we are willing to concede that under certain conditions sweet clover has proven to be a profitable crop yet we hesitate to recommend it to any man who can grow the other legumes luxuriantly. The individual who has hard sledding in getting a stand of alfalfa or red clover can well afford to give this roadside legume a reasonable trial.

ASTONISHING RESULTS IN SEED TESTING.

While much has already been said in regard to the importance of seed testing, yet the average man has not yet awakened to the fact that there is a very great difference between knowledge of seed that is acquired by testing and such knowledge as is the result of guesswork.

This is borne out by the results obtained at a recent state corn and small grain show. After thumbing over thousands of ears at this show judges unanimously decided on a particular ear and placed thereon the purple grand championship ribbon. A little later six kernels from this ear were tested with the result that they were all so weak that they were barely able to sprout. The tap and blade sprouts were dark in color at the ends and there were very few roots.

In the same show in the exhibit of wheat two lots placed well up in the premium list gave a germination test of 90 and 40 per cent respectively. The grand champion sweepstakes bushel of oats in this show tested 78 per cent while some of the winning clover germinated 58 per cent. In the case of the oats the presumption is that they were milled too closely. One sample of clover that presented a fine appearance tested 31 per cent.

This paper is in possession of the results of much of the testing done at this show and we have only given a few examples to indicate to our readers that emphasis in some instances is not being placed where it properly belongs in these contests. When men who have had sufficient experience in judging grain as to justify their selection as judges in these contests, when these men fall down in determining the germination quality of grain by its apearance, what can be said of the average man who has made no special scientific study of the subject?

We assert that the conclusion must be reached that in a matter of this kind guesswork leads us into too many serious blunders. We hope that our readers will not "cool off" in this testing proposition because no man can afford to go blindly in such an important matter.

TREATING OATS FOR SMUT.

An Iowa subscriber, Mr. P. B. Olmstead, asks for information in regard to treating oats for smut. He has had no experience in this matter and wishes, therefore, to obtain detailed instruction.

The formalin method is the one that we recommend most highly. In treating oats according to this plan simply spread them out on a tight floor and thoroughly wet them with a mixture composed of one pound of formalin to forty gallons of water. Formalin is a colorless liquid and possesses powerful disinfecting qualities.

Thoroughly stir the oats with a scoop shovel until they are sufficiently wet so that the water sweeps away on the sides. After that they should be shoveled into a steep pile and covered with sacks or horse blankets for two or three hours. After that length of time the grain is ready to be spread out. It should be shoveled over frequently in order to hasten drying.

We have found it a good plan to begin operations early in the morning and it goes without saying that grain should not be treated in freezing weather. By getting started early an opportunity is afforded to thoroughly dry out the grain the same day that it is treated. We would not advise sacking it up that evening, however, but if it is stirred from time to time and spread out to a thickness of six or eight inches on the floor it will be dry beyond the danger point in ten or twelve hours. In all probability the grain can be sacked up the second day without any danger of having it spoil.

In some instances men have treated it in the forenoon and sowed the grain in the afternoon. The chief objection to this plan is that wet grain does not work so well either in the drill or broadcast seeder and for that reason we prefer to dry it out before attempting to sow it.

ROADS RAISE PRICES.

A contrasting picture of the effect of good roads upon farm prices is painted by a daily newspaper of the grain belt in this manner:

A good farm on a bad road. Nice house. Modern improvements. Fine team. High fertility. Seven miles from town. Owner wants to sell. Advertises. Buyer comes. Has plenty of cash, seeking good farm, pleasantly located. Roads fierce. Conversation hinges on highway. Buyer wants good road to town. Boy in school. Likes to go in to plays, lectures, church. Couldn't offer over $100 an acre and doesn't think he wants the farm at all. No sale.

Same thing, similar farm, similar circumstances, except good, permanent road, good every day in the year. Owner thinking of selling. Same man with cash in hand looking for farm. Conversation hinges on price. Offers $150. Owner can't see it. Keeps edging up $5 at a time. Sale closed at $200 per acre. Everybody happy.

Not the least important phase of the whole highway agitation is the effect of good roads not only upon farm comforts and contentment, but upon farm prices. A Missouri farm which had never been priced above $75 an acre, before the construction of good roads, sold within a few months after their construction for $112.50 an acre, the owner admitting the advance in value was due solely to the new highway. Such incidents are far from rare. The amount asked for road improvement is large enough at times to stagger us, but there are proofs a-plenty that the returns are not long in coming and that the problem is so large as to call for an expenditure and a policy in keeping.

FARM TRACTORS INCREASING IN POPULARITY.

There are thousands of farm tractors in the corn belt and gasoline engines could be counted by the hundreds of thousands. We are informed from a reliable source that a single company will manufacture 100,000 gasoline engines during the next twelve months and a selling force sufficient to dispose of this number will be placed in the field. These facts are sufficient to indicate to our mind that the question of farm power is after all one of the most important that the farmer is obliged to consider. Tractors are now being placed on the market that are suitable for operation on quarter and half-section farms and the day is rapidly approaching when the horse will be liberated from our heaviest form of farm labor.

At this time we would like to make an appeal to those of our readers who have had experience in handling farm tractors. We would like to have them submit to us the results of their experience and to give such instruction and such specific directions in the care and management and operation of these tractors as will aid those who will use these machines for the first time during the coming year. This paper has always emphasized the value of experience as it comes from the practical man and while we do not desire to discount the knowledge or ability of the scientist, yet the practical man is always a little more direct when he gives advice. We are willing to pay suitable cash premiums for such articles as we can use and those who contribute will be appropriately recompensed.

The record price of $8.50 per hundred pounds was made on feeding cattle at the Western National Live Stock Show held in Denver last week. This was realized on two car loads of Short-horn steers averaging about 1,100 pounds, the price being paid by an Iowa breeder, Mr. M. G. Beers. The $8 mark was reached at the same show last year, but that record has gone glimmering. This high price means nine-cent cattle when they are in the feed yard. It is hoped that these steers will give a good account of themselves when they gain access to good Iowa corn and clover hay.

Your attention is directed to "A Year of Good Reading" on page 4.

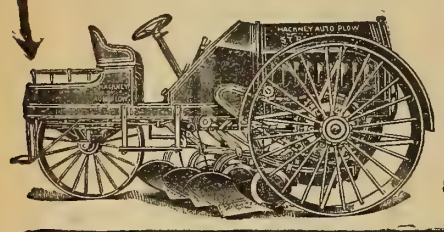
HACKNEY AUTO PLOW

EVERY farmer realizes the importance of "quick action" at seeding time and knows that delays at that particular time are very costly. The whole crop may be ruined through not being able to secure help or the sickness of or an accident to the horses.

The Hackney Auto Plow solves all such problems satisfactorily. It will not only do the Seeding when the soil is in the best condition, but also the

PLOWING, DISCING, HARROWING, HARVESTING, THRESHING, ROAD GRADING, WOOD SAWING, FEED GRINDING,

and all other work where power is required. It is a strictly **ONE-MAN** machine, a tireless worker night or day, rain or shine, and there is no "hold-up by the hired man" for the farmer who has a Hackney Auto-Plow. Its successful performances in all parts of the country, in all kinds of soil, and under all sorts of conditions proclaim it the greatest labor-saving device for the farmer ever invented.



Write today for catalog, photos of machine and testimonial letters from users.

Hackney Manufacturing Co.,

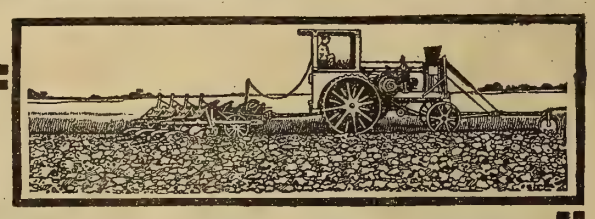
St. Paul, Minnesota



Plowing is Play With This AVERY "Self-Guide" Tractor and "Self-Lift" Plow

Think of riding over your fields on an Avery "Self-Guide" Tractor that automatically follows the furrow **without your touching the steering wheel.** Just sit on the seat and watch it run. Think of pulling a cord at the ends of the furrows and the plows raising and lowering **by power taken from the plow wheels. Just think how easy work plowing would be with this Avery "Self-Guide" Tractor and "Self-Lift" Plow.**

Besides making plowing **play,** the Avery Power Plowing Outfit makes it **far cheaper** than with horses or any other outfit. Compared with horse farming, records of owners show that an Avery Outfit plows for **half or less than half** the cost of horse plowing. Also saves on other farm work. Compared with other outfits, an Avery saves the wages and board of a plowman. Whether you are a man or a boy, you can run an Avery Outfit **all alone.**

Avery Tractors make Power Farming a success on **small, medium or large farms.** The 12-25 H. P. plows 10 to 12 acres per day and just fits the small size farm—the 20-35 H. P. plows 15 to 18 acres per day and is just right for a medium size farm—the 40-80 H. P. plows 25 to 30 acres per day and is built for big farms.

Because Avery Tractors are **"Light-weight"** they will work on any ground in condition to be worked with horses. The 12-25 H. P. weighs less than 7,500 pounds, the 20-35 H. P. less than 11,500 pounds, and the 40-80 H. P. only 20,000 pounds. Also the **simplest** tractors built. Burns gasoline or kerosene.

Sold Under the Avery Mutual Benefit Selling Plan

Avery "Light-Weight" Tractors and "Self-Lift" Plows are **Sold on Approval** and **Fully Guaranteed. At low prices**—only $1,200 for 12-25 H. P. Tractor, $2,000 for 20-35 H. P., $2.650 for 40-80 H. P. Backed up by a large and reliable company.

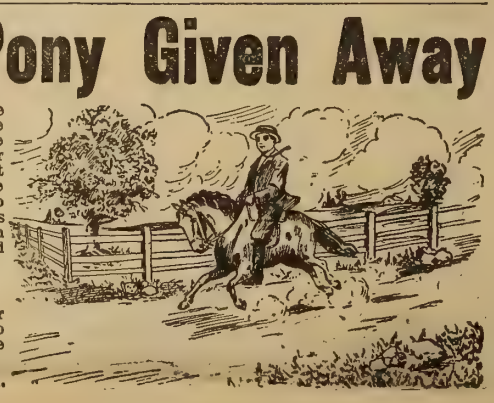
Fine Prize Pony Given Away

You see in this picture a boy riding one of the splendid prize ponies I am going to give away. In other parts of the picture are the faces of several other boys. They are rather hard to find, but by turning the picture about you can see them. Mark at least two of the faces with a cross (X) and send the picture to me. Be sure to send your name and address so I can tell you all about the contest in which you can win a beautiful pony and many other prizes.



1500 Votes Free

I will send you a special coupon good for 1500 votes toward the pony. All you have to do to get this coupon is to send your name and address at once.

FARM FURROWS

TURNED BY A PRACTICAL FARMER

Keeping the sifting winds off the pigs in their nests is shutting the profits inside the hog house.

Zero weather may be exactly to our liking in every way, but we must not forget that it is bully for the ice crop.

Fix up a neat box house on a pole for the martins to nest in this summer. They are the cheeriest lot of chatterers one can have about the farm and are a world of company, especially to the women. Then they chase the hawks and crows away and are death and destruction to thousands of bugs and insects that otherwise would prey on the orchard fruits and garden products. Building smaller boxes for the bluebirds and one for the wrens will also be a little time profitably spent.

Doing business on credit is all right to a certain extent, but it is well to remember that the less anyone's credit is used the better it is.

Pay particular attention to the calves from now on. Often they are crowded out of their shelter by the older stock, unless one makes sure that they are in snug, comfortable quarters, where the larger stock cannot reach them. Then we cannot expect the little fellows to do well on the same rations we give the grown stock. A little bran, oats and corn-chop (equal parts), some clean, tender roughage (clover or alfalfa is best), and plenty of pure water at the temperature it comes from the well—all these are pressing essentials that cost little, but count for much in the growth and development of the calves.

If mice can get to the stacker rope the chances are you will have to buy a new one before you begin haying.

The manure spreader is a labor saver, all right, but this is not its only good point. It is the greater acreage that can be covered with a given amount of manure that counts. When manure is to be spread on meadow land or in the pasture the spreader is so far ahead of the fork that no comparison can be made.

The telephones and rural free delivery of mail have helped make farm life more pleasant. Now it looks as though the electric storage battery is going to make it so that it will take an expert to explain what is meant by "the conveniencies of city life."

Dry forest leaves form an excellent article for putting in the poultry scratching shed, and make a fine fertilizer for the fields after being used.

Up to the present there have been few days that the cows could not enjoy a couple of hours out of doors. It is best, though, to allow them to be the judges of the length of time they shall stay out. When they come to the door they should be allowed to walk right in and should find a feed awaiting them. When this is the rule it is very seldom that they will stay out longer than what is good for them.

Colts and milk cows should not be turned into the same yard at the same time, especially in the winter time, because what is play to the colts is torture to the cows and a cow that is to do her best must know as little as possible of even the mildest form of torture.

Poultry netting stretched across the windows in the hen house will protect the panes and let in more light than any other protection in common use.

It is unreasonable to expect that every man who builds a silo will make a success of it because if they do every one of them would have to be "on the job" every day in the week. The silo, like many other good things, is not a money maker in itself. It all depends on "the man behind."

Small leaks on the farm are what combine to cut the great gaps in the profits.

One man can often raise a bushel of corn cheaper than another or produce a pound of pork or beef cheaper. The cheaper stuff can be produced the greater the profit, but it costs something, these days, to equip to produce economically.

Renters are now indulging in their usual scramble for the coming year's location. The more desirable farms have already been rented, but there is competition, this year, for those less desirable.

I once helped to shell 700 bushels of corn with a hand sheller. That was before a power sheller was owned in the neighborhood, and a long time before inventive man fixed it so a small gasoline motor could be made to take the place of elbow grease in propeling a small sheller.

When the cattle shiver after drinking it is a sure sign that there is something wrong with the management. It will take some good feed to stop the shivering that might just as well be turned into beef or butter.

Our ice harvest is on in full blast and in spite of rather unfavorable weather it is a bumper crop both in quality and quantity, but those who want a supply for next summer must get busy right away.

A New Buggy

For a Dollar's Worth of Lucas Carriage Gloss Paint

A buggy is only as old as it looks. Your buggy will look **new,** if you treat it with a coat or two of Lucas Carriage Gloss. Gives a high gloss. Dries quickly. Applied one day and vehicle used the next. Lasts a long time.

Also freshen up the buggy top with Lucas Top Dressing. It protects and lengthens service as well as beautifies.

Just as good for Autos, Bicycles, Go-Carts, Sleighs, Radiators, etc.

Lucas Paints

are the best of their kind. Made of materials not only selected as pure, but **proved** pure by four exacting tests. 64 years experience goes into every Lucas product. Made in the best equipped factory in the country. The men in charge have been 25 to 40 years with us. The finished paint has to pass most rigid tests by chemists, practical painters and color experts. Always dependable and good in every way.

Free Book "When and How To Paint"

tells just the things you need to know about paint to enable you to select the right kind. It also tells what paint, varnish or enamel to get—what kind of brush to use, how many coats to give, how long to let dry, etc., if you want to refinish furniture, beds, walls, floors, implements, vehicles, etc. This book is worth many dollars to you. We send it free upon receipt of your name and address and that of your nearest dealer.

APEX
TRADE MARK
FENCE
The Top Notch Of Fence Value For You

The cost of a fence depends on its service and how long it lasts, figuring the repair expense. A "cheap" fence doesn't pay, no matter how little it costs at the start. Get the best fence made. It will last twice as long—will cost least per year, and will always look good. Get Apex fence if you want the most for your money in service and satisfaction—the *top notch* of fence value.

The Swinging Joint

The swinging joint allows the horizontal wires to swing up or down with the roll of the land—yet the upright wires are always straight. That's why Apex fence is the easiest to put up, and why it keeps up straight after others are lopped over. Apex is even and smooth on hill, hollow or level. Never strains or buckles.

Another reason why Apex doesn't sag or snap is the Tension Curves which allow for expansion and contraction.

Other Reasons

Apex Fence is made of purest Open Hearth Steel, tough, springy, elastic. It is galvanized by a process which makes the zinc a part of the wire itself—it can't chip, flake or crack.

Write and tell us how much fence and what height you need and we'll make you a proposition. Or see your Apex Fence dealer if one is near you. Anyway, write for free booklet of facts and proofs. Address

Stockmen Sketches

ONE of the hopeful features of our times is shown in the tendency of our families to follow in certain lines of business endeavor. It is not a matter for wonder then that R. O. Miller, the subject of this sketch, should just naturally take up the raising of fine stock. His father, a native of Ireland, had been a lover of fine stock and was a pioneer in the introduction and breeding of Percherons in the late sixties or early seventies. For more than half a century the home farm of R. O. Miller, in Lucas county, Iowa, has been a fountain head from which came great numbers of Percheron and Clydesdale horses, Oxford Down sheep and Short-horn cattle, that were widely distributed over the entire stock-raising country. These have exerted a beneficial influence because it has ever been the Miller theory that only high class breeding animals should be sent out.

R. O. MILLER.

Mr. Miller early took an interest in and liking for Short-horn cattle, and his first venture in that line was the purchase of a car load of cows of the Marigold, Clara and Augusta families direct from the now famous Marr and Bruce herds. The excellence of his judgment in this purchase was later vindicated by the universal demand for cattle of Marr and Bruce production.

In all his farm operations Mr. Miller has been governed by those practical reasons that are common alike to the farmer and the breeder who attain to success in their lines. Cattle and horses are kept under natural conditions which bring them to their highest development in the most economical manner. This means in reality usefulness in the greatest degree, profit to the producer and satisfactory service to the purchaser.

Breeding establishments like that of R. O. Miller are an important element in agricultural advancement because they follow conservative lines and may always be depended upon. They are not in the dollar-chaser class nor do they worship at the shrine of fadism. Following after high ideals himself, Mr. Miller, more than he is conscious of, is an inspiration to those of his neighbors and associates who are bent on adopting improved methods in their farming operations.

INCUBATOR SEED TESTER.

To the Editor of The Homestead:

It is important at times to test seed before planting, and it is difficult to keep the tester warm in an ordinary room. Nearly every farmer has an incubator, and proper heat for germinating seeds can easily be maintained. If the incubator is not yet in use, make a false tray of light wood. Put in an inch or two of cotton, old felt or other absorbent. Cover with heavy cloth, an old blanket being ideal. Place seed on this in numbered squares, and cover with another cloth, the heavier the better. Wet it thoroughly, place in incubator, run heat up to 85 degrees and set regulator at about that temperature. Ten degrees more or less will not matter. They will have an even, high temperature, germinating in shortest time possible, giving every seed equal test.

If incubator is in use at time for making an early hatch use large plates or platters, which may be prepared in a similar way and placed under egg tray in chick nursery, and will not interfer with hatch. Heat will be rather high, but will not injure seed in any way. They will have to be watered as the cloth covering becomes dry. H. F. Grinstead.

Ask your neighbor to subscribe for The Homestead.

A Furnace Guaranteed to Heat Every Room to 70 Degrees in Even the Coldest Weather!

THE one furnace on the market today that is absolutely *guaranteed* to make good—the one that is guaranteed to give better, steadier, cleaner and *healthier* heat—perfectly moist. It's the greatest *saver* of fuel bills in the world. Has big water reservoir, holding 15 gallons or more—this means moist air *all the time*. Has large firepot, big fire, slow combustion, every particle of heat is used—this *saves* fuel. Patent Heat Retainer saves fuel. Big air chamber saves fuel. Down draft radiator saves fuel. These are only a few of the practical points of construction in the

Campbell Guaranteed Winter Chaser Furnace

—that make it *a money saver*. It will outlast any other furnace made. Heavy steel plate is the kind used to make it so doubly durable. This Winter Chaser Furnace has been in many homes for more than 25 years. And the happy owners are still getting perfect moist heat even during coldest weather. It can't freeze and burst—it burns anything—you always have warm floors—it makes *cleanest* heat—all registers in the right place. It's first cost is within *your* reach.

CURRENT EVENTS

AFTER a long and hard fight, of many years standing, home rule for Ireland is imminent, the house of commons having passed the bill a few days ago by a majority of 110. It was immediately sent to the house of lords, where it went through its first reading with the prospects good of the Asquith government securing its passage within the next few weeks. In the meantime, however, conditions in the northern part of Ireland, and particularly in Ulster, are so serious that opponents of home rule are openly declaring if parliament passes the bill there can be but one result, to precipitate a bloody and costly civil war. The trouble is caused by the fact that the Catholics predominate in the greater part of Ireland, but in Ulster the Protestants predominate. The Ulster men declare that they will refuse to be governed by the Catholics, to whom, because of their predominance, will be given all of the important government positions. The affair thus resolves itself into a church struggle which for intensity and probable tragedy of results has not been surpassed in a long time. Already there has been rioting in Belfast and the police have frequently been called out to disperse mobs which have gathered both in support of and antagonistic to the bill. Whether this show of force in Ulster will prevent the house of lords from following the house of commons in passing the bill has not yet developed, but home rule is nearer than it has ever been before. The bill provides a separate parliament for Ireland, with power to pass practically any measure, subject only to the approval of the crown.

JUST as a resumption of war seemed inevitable, Turkey acceded to the suggestion of the big powers of Europe (England, France, Germany, Italy, Russia and Austria) and decided to grant to the Balkan allies the demanded surrender of the fortress of Adrianople, leaving the fate of the Aegean islands to be settled later by the powers. This will probably avert a continuation of the war, for which Bulgaria and the other Balkan states were rapidly preparing when Turkey gave in at the last moment. There is a general feeling that if the Mohammedan and all that he represents, in contrast with Christianity, is ever to be driven from his European stronghold it must be done now and that to surrender or make any concessions would be a fatal mistake. The peace plans now contemplate allowing the sultan to retain the city of Constantinople and a little strip of surrounding country, but aside from that his last European territory will be taken from him and divided among the Balkan states. The crescent has ruled all too long in the southern part of Europe, but went down before the vigorous onslaught of the cross, upheld by the Bulgars, Montenegrins, Servians and Greeks. The war was one of the shortest and most decisive in history.

WOODROW WILSON will remain in service as governor of New Jersey until March 3d, when he will resign to be succeeded by the democratic lieutenant governor, who is pledged to carry out his progressive policies. Governor Wilson will go to Washington the night he resigns and the following day will be sworn in as president of the United States. His early proposal to postpone the inauguration ceremonies until late in April has not been accepted, because of the conflict with the plans of the inaugural committee. At his request, however, the regular inaugural ball has been entirely dispensed with. The president-elect's main objection was that the ball was not only expensive, the cost running far beyond $100,000, but that it necessitated taking the pension building and throwing the clerks out of the regular work for some days. The regular inaugural parade will be held, with General Leonard Wood, chief of staff of the regular army, as marshal. In the closing days of his service at Trenton, Governor Wilson is securing the introduction of a number of reform measures calling for the extensive revision of the corporation laws and otherwise putting into effect his progressive ideas.

JUNE 30th is the day set for the demise of the court of commerce, created by the Wickersham bill. Had it not been for the necessity of time in which to close up the affairs of the court, the demise would have occurred on March 4th, but congress allowed the intervening weeks for the completion of unfinished business. The court has been in existence only the last three years, but in this short length of time it has proved its utter uselessness and inefficiency, having served only to reverse numerous findings of the Interstate Commerce Commission and to give to the railroads rights and powers denied them by the commission. The impeachment of Judge Archbald went far toward making the early death of the court certain, although its days had been numbered prior to that, owing to the disclosures that it was standing between the shippers and justice.

FREE meat is proposed by the democratic ways and means committee of the lower house of congress, several days during the past week having been devoted to a discussion of the removal of the existing duties on all necessities of life, including meat, sugar and lumber. Members of the committee emphasized the majority sentiment in favor of free meats and a strong demand toward free cattle. Protest against putting cattle and meat upon the free list was voiced by S. H. Cowan, Fort Worth, Texas, spokesman for the cattle industry west of the Mississippi. Mr. Cowan declared that if such a plan were adopted it would mean a flood of cheaper meats from South America, resulting in ruin to the industry not alone in Texas, but in the other breeding and feeding states. Definite action will not be taken until the extraordinary session of congress which convenes about the middle of March. In the meantime the matter will be carefully gone into by the ways and means committee and an opportunity will be given to interested parties to express their opinions both for and against the reduction of the existing tariff. It is expected that the cattle men will make a strong showing, inasmuch as they feel that the life of their industry is at stake.

SENATOR ELIHU ROOT, of New York, secretary of state in the cabinet of President Roosevelt, delivered an emphatic speech in the senate denouncing the bill which excludes American coastwise vessels from paying tolls through the Panama Canal. He declared that were the United States to exclude these vessels it would stand before the world not as an advocate of justice and a square deal, but as an advocate of

special privilege. Senator Root is leading the fight in the senate to rescind the former action excluding these vessels, largely because of the protest filed by Great Britain on the ground that the exclusion violates the Hay-Pauncefote treaty which guaranteed equal treatment to the vessels of all nations. It is considered highly probable that rather than have the controversy go to an international court of arbitration the senate will annul the existing measure and put all vessels on an equal footing.

SUCCESS WITH CONSOLIDATED SCHOOLS.

(Continued from page 8.)

be opened up before the railroads. I have met people who seem to think the blockading of roads a strong argument against consolidation, but I have never had it suggested that the railroads should be abandoned on the same account, and yet the argument would hold good in the one case as well as in the other. In time of muddy roads it is often necessary to hitch two teams to a wagon, but when it is necessary it is done. Much of the success of the system of transportation is due to the spirit of the drivers and their determination to get their loads through. Where there is a will there is a way and I have known it to happen that the school buses would run on a day when the mail carriers would not undertake to drive their routes. It is this spirit of pride in their school that pervades the whole community that makes the school a success. But it might be well to say right here that this enthusiasm did not come in advance of the establishment of the district and when consolidation was proposed it was not accomplished without opposition. The same divided opinion as to merits and demerits of the system prevailed here that has prevailed in almost every community where consolidation has been proposed. If the establishment of this school had never done another thing than to unite the people of the town and country in a community with one common interest and dispel all that feeling of jealousy and suspicion that so often prevails between town and country, it would have been worth every dollar it has ever cost. But it has done more than this, it has led the people to believe that they can do things for themselves. It has developed a co-operative spirit and given our people that confidence that leads to success in a united effort, until today they have their farm elevators, lumber yard and trading companies. It has brought about better road conditions and no better roads are to be found in Buena Vista county than are found in Poland township where this school is located.

In addition to all this, the children of this community are given the opportunity of securing a high school education that is second to none in the state. At an educational meeting recently held in Marathon the girls of the class in domestic science served a banquet of several courses to the members of the Better Iowa Schools Commission that would have been a credit to any French cook and as one visitor remarked: "I have paid $5 per plate for no better."

What is true of the school at Marathon as to improvement in educational opportunities is true of the other two schools in Buena Vista county, the only difference being in the extent of development. If these schools fail to reach the high standard of the Marathon school it will be the fault of the community and not that of the system. Already the school at Newell is beginning to crowd the school at Marathon for distinction in certain particulars and it is but a matter of time before Marathon will be compelled to look to her laurels.

Not too much can be said in support of the system and if the bill prepared by the Better Iowa Schools Commission and presented to the state legislature giving state aid to this class of schools becomes a law, as it should, the next two years should bring great changes in our rural school conditions.

ISAAC FUNK IN HALL OF FAME.

Isaac Funk, pioneer of McLean county, Ill., was honored by being admitted to the Illinois Farmers' Hall of Fame at the University of Illinois College of Agriculture last week.

Elizabeth Funk, his great granddaughter, unveiled his portrait this afternoon and it was presented to the university by Lafayette Funk, son of the honored man

Thomas C. Kerrick, of Bloomington, delivered an address on Funk as a farmer and legislator. It was announced that Philip D. Armour, famous packer, will next be honored. His name will be admitted in January, 1914. Thirty-five members of the Funk family were present.

"Isaac Funk's achievements in either of these great fields of human endeavor," said Mr. Kerrick, "would sufficiently entitle him to the highest mark or honor which is being given him here today. We are not making Isaac Funk famous today, but we are merely recording a judgment previously arrived at in the court of public opinion.

"Before coming to Illinois Isaac Funk learned to deal in live stock. Two years after building his cabin at Funk's Grove he wooed and wedded Cassandra Sharp, of Peoria, and brought her on horseback to his home. From this union dated Mr. Funk's remarkable career.

"He was a patriot of the loftiest type, a defender of liberty, civil and religious, a friend of education, and a liberal contributor. He hated human slavery and was heart and soul and purse for the preservation of the Union in the sixties.

"In 1840 the Whig party elected Mr. Funk to the lower house of the state legislature. In 1862 the republican party elected him to serve out the unexpired term of Dick Oglesby, and after that elected him to the full term in the state senate.

"It was in the latter term, when the arrogant opponents of the civil war, having cowed the weak-kneed believers in the Union, were about to let the Union be destroyed, that Funk made that speech which is remembered by more people who think patriotically than any speech made by any Illinoisan excepting only Lincoln and Oglesby. That speech, considering the need for it and how it satisfied that need, was one of the greatest of all speeches and in my judgment proves that great as was Isaac Funk as a farmer, he was even greater as a legislator.

"At his death Isaac Funk owned 25,000 acres of as good land as was ever owned by any man in a single compact tract. This land he earned. He made a market for stockmen where none existed before. Starting with nothing, he left a fortune, the present value of his estate being estimated at $6,000,000."

Make Your Farm and Dairy Disease Proof

We'll Show You How and Send You This Big Bottle of B-K FREE

We are going to place a large, free sample bottle of B-K, the wonderful new disease exterminator in the hands of the first 10,000 farmers who fill out the coupon below and mail it to us AT ONCE.

With this powerful weapon at hand you can make and keep your farm and dairy **DISEASE PROOF**—you can fight off Tuberculosis, Typhoid, Hog Cholera, Calf Cholera, Contagious Abortion, Anthrax—in fact all of the deadly scourges that attack and destroy farm animals.

These destructive plagues are **GERM DISEASES** and the only way to conquer and prevent them is to **"Kill the Germs."** That is exactly what B-K does. This wonderful new discovery has no known equal as a germ killer.

In laboratory tests, one drop of B-K placed in 5 tablespoonsful of water killed the Hog Cholera germ instantly. One drop in 6 tablespoonsful of water destroyed the Typhoid germ and so on throughout the entire list of contagious diseases.

10 times as Powerful as Carbolic Acid as a Germ Destroyer, but Non-poisonous to Human and Animal Life.

B-K Bacili-Kil

Destroys Germs and Prevents Disease. Purifies, Disinfects, Removes Odors. Indispensable on the Farm, in the Dairy and Home.

B-K is especially valuable to farmers and stock raisers because it destroys all forms of disease breeding germs, and quickly rids all farm animals of worms. Read the following letter. It is a sample of hundreds we have received.

We are surprised and gratified to be able to report so soon that our herd of about 275 hogs which were badly afflicted and dying with Swine Plague are completely recovered, through the use of your Bacili-Kil Sterilizing Method. We began treatment according to directions about three weeks ago All are now well, strong and on their feed and gaining back their flesh. K. J. Schultz, Supt. Tilden Farms, Delavan, Wis.

For cleaning up and purifying the stables, cattle and dairy for reducing bacterial count, purifying and removing foul odors from milk cans, cream separators, sinks, refrigerators, churns—also for garbage cans, swill barrels, drain pipes, water closets, outhouses etc., it is especially valuable.

Trial Bottle FREE

Just fill out the coupon at right and mail it to us at once Send no money. We will send you a free full bottle of B-K (Bacili-Kil) so you can see for yourself how it will make your farm PROOF against disease—how it will stop your losses—and PROTECT your home and family Fill out the coupon. Send it now,—lest you forget.

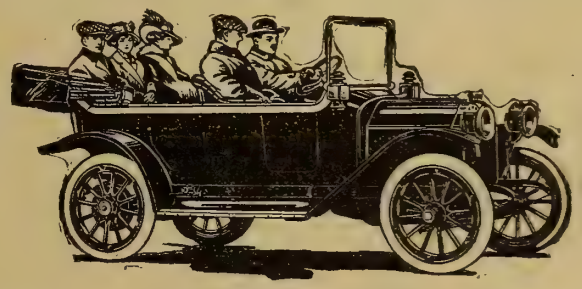
$850 Detroiter $900

The Car for Rough Roads

Bad roads have no terrors for the Detroiter. It is a car for every day in the year service. With NINE BIG FEATURES, ample power high clearance, and easy riding action it is the ideal light automobile for hard work—and lots of it.

FIVE Passenger Touring Car.



$850 With Standard Equipment.

Nine Big Features:

1. Full floating rear axle.
2. Platform rear spring.
3. Multiple disc clutch.
4. Long stroke motor.
5. Enclosed valves on one side.
6. Extra capacity radiator.
7. Left hand drive, center control.
8. Extraordinary braking surface.
9. Ball bearing throughout.

The Low After Cost.

In direct proportion to the first cost of the Detroiter—the low after cost is also exceptional. The same nine exclusive features of construction which make this car distinctive in the low price field make it likewise a marvel of low upkeep.

The average mileage of the many Detroiter cars in actual service is from 20 to 25 miles per gallon of gasoline and 100 miles on a quart of lubricant.

The light car weight and large size tires give long life to the rubber casings and keep this item exceptionally low.

Depreciation in value works slowly with the Detroiter. It is built so strongly, it has such big factors of safety that it is practically as good the second season as the first. It stays new.

Send for the Detroiter booklet.

The Five Models.

Both touring car and roadster models are equipped to suit every preference Top with side curtains and dust cover windshield, kits; lamps generator, horn and jack—with $850 model. In addition — Speedometer, Prest-o-Lite or electric outfit, quick demountable rims, tire irons, etc., with all $900 models.

A Word to the Stallion and Jack Men of Iowa.

By H. Osterhoudt, Boone County, Iowa.

IOWA horsemen have been discriminated against by all the laws which have been passed. I do not want to criticise the intent of the present stallion law, but will say they have made a bad mess of it.

In the first place when the assessor comes he can raise the assessment on recorded stallions and jacks to seven or eight times as much as on those not recorded. To encourage better breeding all stock that is kept for service and not for sale should be exempt from taxation. Then again if we want to ship a stallion or jack on the railroad we have to pay for 3,000 pounds, even though the jack may not weigh over 800 pounds, while a mare or gelding is shipped at a much lower rate. Then nearly all towns and cities have an ordinance prohibiting exhibiting a stallion on the streets and some prohibit keeping them altogether, which law I do not think would stand a test.

Even the blacksmith's union charges $6 for shoeing your stallion, and if you want his shoes reset the charge you $3, whereas they will shoe an unruly farm horse for $2, or reset his shoes for $1.

Then comes the stallion and jack law dealing with the question of soundness, which is very unfair to the stallion man, inasmuch as there have been no restrictions since Iowa has been a state. To say all at once that we shall have all sound stallions and allow the mares to go unsound is not reasonable on the face of it. Then again we have to get a college veterinary or the owner to examine the stallion or jack. This is not fair, as the owner may not be honest and the veterinary surgeon may be prejudiced or not competent to examine, or he may be drunk, as they frequently are. I do not say that they are all bad, but I will say from my observation that they are not up to the average standing in morals and truthfulness, and the horse doctor that has learned by practical experience is knocked out altogether. Then there is no limit as to what shall be charged for the examination, whether it shall be $1 or $50. I have had some experience with this examination and the board of agriculture, wherein I was treated very unfairly and had one horse condemned and was refused state examination which is my loss.

Now there is no one who would like to see improvements in horses more than I would, but under present conditions we will go back instead of ahead. I think the present stallion and jack law should be repealed altogether and work for a national law that all stock imported to this country should be examined for soundness as well as for contagious disease, and if they are not sound they should not be allowed to land. The importers should be the judges as to soundness of horses and if they are not competent they should go out of business. They buy to sell, and not to keep and stand. Most of the worst diseases come from Europe and do not belong to our native horse.

If we have to have this stallion law it should be amended so that when a horse or jack is condemned the state of Iowa should pay the owner what the animal is reasonably worth and make away with it and the state should elect three men to examine all the stallions and jacks in the state, and all three act together and the state pay all the expenses. In this way they would not be apt to show partiality to any one. As it now is some are marked blemished when they are not and others should be marked that are not marked.

I do not believe the state has legal right to confiscate property without paying an indemnity for the same. A man would be very foolish to buy a high-priced stallion as things now stand and take him out to show to a customer and have him jump and play and injure himself and then have him condemned and lose him. The law as it is will cause a cheaper grade of horses to be brought to this country and we will be going down instead of up. If the state wants to do something in the interest of horse breeding let them pass a law that we have a lien on the mare and colt until the service fee is paid and that we get half pay for all mares that get in foal and abort or lose their colts at foaling time. Then the mare will get better care and will bring better colts and will encourage the stallion and jack men to keep better stock.

I have been in the business for thirty years. Not that there is big money in it and I expect to get rich, but I have to make a living. I take a great deal of pride in good horses and mules. There is not one man in 400 that would take a stallion and care for it a whole year, so you see it is not so desirable a job that any one need get jealous and want to persecute by hampering us with law.

Now we have built up the horse and mule business in Iowa until their value amounts to more than all the other live stock combined and have better ones than any other state, notwithstanding the buyers are all the time trying to take the best out. In all the years I have been in the business I have always tried to get as good ones as my means would permit and I never lacked for business. Last year I stood six stallions and made a big season with all of them. The man that does not keep good stock will have to go out of the business. You do not have to pass laws to put him out and make it hard for the man that is doing right.

The farmer is not slow when he sees a dollar in sight. You do not have to drive him to a good stallion or jack. It appears that most importers want to do away with the grade horses altogether. I am not particularly in favor of keeping grades, but I do not think it advisable to knock them out altogether at this time, as I would rather have a good individual grade than a poor imported individual. In Europe all or nearly all the stallions are kept, while in this country nothing but the best, or nearly so, are kept. When the horse buyer comes around he does not question the breeding of the animal, but buys him for what he can see. A good individual and a right good individual is a very good pedigree.

We have altogether too many kid-glove horsemen and kid-glove farmers telling us what to do and altogether too much red tape. I would say to them to get in the business and get your feet wet and you will know more about it in ten years.

THE EXPENSE OF AUTO UPKEEP.

I notice in a recent issue of your paper an article regarding the upkeep expense of automobiles. While I don't know how my expense compares with others, I have kept an accurate account of the same and find I have paid out as follows:

Oil	$ 5.70
Gasoline	25.38
Spark plugs	1.95
Brass polish	.25
Repair damaged fender	3.00
Repair of tires (vulcanizing)	2.00
Exchange of two defective tires after 1,000 miles' use.	14.00
Three light tanks	7.50
Total	$59.78

My car is a 1912 model twenty-five horsepower; five passenger. It has been driven 2,630 miles on the above expense. Practically all the time it carried a load of three to five passengers. My gasoline bill is larger than it should be, as there was a leak in the connections, which I did not discover until cold weather. I purchased the car May 16, 1912. My experience has been that plenty of oil, water, well-inflated tires and careful driving regulate the expense.

Kansas. H. E. Cooper.

60 Days Trial FREE

Yes, 60 whole days to try out a Davenport Multiple Compression Engine on your own place. Write—write for our big offer. We want you to test it and try it out on your own place two entire months before you decide to keep it. Two months will tell you all about any engine. It will certainly show you how the Davenport Multiple Compression Engine will pull when hooked up to any machine you wish to attach it to. Watch it work—watch it deliver the power then send it back if you don't want to keep it. Your choice of sizes: 4 H.P., 5½ H.P., 7½ H.P., etc.

Engine Prices Smashed

We now offer you an opportunity to get any of the Davenport Engines at the Rock-Bottom Price, the **same identical price that even the wholesale dealer would have to pay.** And we are offering them for the present **direct from the factory,** with every profit but a fair working profit to us eliminated. We can offer you startling gasoline engine values never equalled before in the history of the industry!

We Guarantee every one of our engines in every piece and part for five years.

Multiple Compression

That's it! That's the wonderful special feature of the Davenport Engine which makes this great offer possible. Our Multiple Compression Engines have become the sensation of the whole gasoline engine industry. Multiple compression! No wonder they out-pull everything they ever went up against. See here! On every engine we put a tag showing you just what horse power this particular engine has developed—and this tag is attested **by a Notary Public.** Find another engine in the world which gives you proof like this if you can. Write for our offer now.

Write Today---A Postal Will Do

Just your name and address on a post card is enough. Merely say: "I want to know about your Multiple Compression Engine and your offer." We will send to you, absolutely free and prepaid, full particulars of this startling gasoline engine offer. We will also tell you about our Multiple Compression Engines and how they have revolutionized the entire gasoline engine industry. Also our offer to give you an engine on trial. But be sure to write today.

DAVENPORT ENGINE WORKS, Dept. 4471 Davenport, Ia.

BOWSHER

Ground feed will make your hogs, steers, all animals bring bigger profits. Bowsher Mills do the job quick, because they are light running, with perfect conical shape grinders, different from all others. Sold with or without elevators.

Crush ear corn (with or without shucks.) Grind Kaffir in the head and all kinds of small grains. Handy to operate. 10 sizes—2 to 25 H. P. Also sweep grinders.

MEAD CYCLE CO., Dept. T 184 CHICAGO

Wintering the Work Horses.

By W. F. Purdue.

EVERY farmer wants to winter his work horses as economically as possible, but it is to be regretted that some farmers practice economy in the wrong direction. The important point to be borne in mind at this time is this: Are the horses being wintered in such a manner that they will come out in the spring in the proper condition to take up the spring work and perform steady, everyday service? If this question can be answered satisfactorily, well and good. Those farmers who have learned that it pays to keep their work horses in good health and in good flesh during the winter months so the animals will be in prime condition to wade right into the spring work without suffering any serious effects have learned the true secret of wintering their horses most economically, while those who compel their animals to rough it through so that spring finds them long haired and run down in flesh have yet to learn this secret. Feed will be saved by the latter method of wintering the animals, to be sure, but it is costly economy to save feed in this way.

The work horses may be divided into three classes during the winter, namely, those that will be worked more or less regularly throughout the winter, idle horses, and mares in foal. In regard to the first class little need be said. Of course, their feed should be governed by the amount of work required of them, and therefore their management will not differ materially from other seasons. During periods of idleness the good manager will naturally cut down their rations, and he will allow the animals to secure some exercise on all idle days.

Idle horses, however, call for skilful management, particularly in regard to their feed. There is no need to supply fat and flesh nor to stimulate muscular energy. What is needed by the animals is a good maintenance ration, one containing sufficient nutrients to rebuild the tissues of the body as fast as they are broken down by the everyday activities of the vital organs. This can be accomplished only by regular and careful feeding on a good allowance of clean, palatable hay and a fair quantity of wholesome grain. Some bright straw and fodder may be used in connection with the hay, but the animals should not be confined to this class of roughage alone. The greatest mistake usually made in feeding idle horses is that of giving too much roughage in order to save grain. This practice seriously impairs the digestion if continued for any length of time. From ten to fifteen pounds of hay, or its equivalent in other feeds, is entirely enough roughage when given with a grain ration of from six to eight pounds per day. Three ears of corn three times a day along with a small quantity of oats or bran is a large enough grain ration for idle animals. Of course, if the horses are exposed to the rigors of winter without comfortable shelter more grain will be required than otherwise. But shelter is cheaper than feed.

Mares in foal need to be wintered much the same as the work horses, even though they themselves are not performing much work. Good nourishing food is demanded at all times. The mares may be worked regularly at light work if necessary, and nothing but good results will follow. They should be well shod, however, when taken out on slippery roads, but this applies to all the horses that are being worked. It is not advisable to keep shoes on the horses that are doing no work, because while standing in the stable the outside walls of the hoofs will overgrow the shoe. As exercise is very essential to good health, the good manager will allow all his horses the freedom of a large lot or field every pleasant day. Even on comparatively stormy days, when rain or snow is not falling, a few hours in the open air will be profitable. Let the sun first warm up the air before letting the animals out of the stable, then the change to the chilled atmosphere outside will cause no ill effects.

It pays to provide comfortable quarters for all the horses and colts during winter weather, though they need not be confined unnecessarily to their stalls in the daytime. But it is best to keep them shut up every night. A separate stall for each horse, and especially in the case of mares in foal, is preferable, then there is no danger of one animal inflicting injuries on another. It often happens that one of the horses in a double stall is stronger tempered than its mate, and then the latter is kept standing close to the wall with no opportunity to lie down.

The stalls ought to be light and well ventilated. Many horse stables in those sections of the country where the winters are usually severe have few windows. The prevailing idea is that windows admit cold air, hence they are undesirable. But it is impossible to keep a stable from becoming foul smelling without admitting an abundance of fresh air and sunshine. If all the windows are placed as high from the floor as possible, when they are open during the day there will be little draft directly against the horses. One or two windows may be opened at a time to admit fresh air, while, with glass windows, the sunshine will have access at all hours of the day. The stalls should not be planked clean to the top as most of them are. Just sufficient planking to make a barrier between the animals is best, then there will be a more free circulation of air through the stable.

Use bedding in the stalls liberally, as floors are always cold and uncomfortable without it. Then bedding helps to keep the animals clean and it makes the manure more valuable, as it absorbs the liquids. The straw or poor hay which is used for bedding will pay for itself in the increased value of the manure alone.

Horses will not drink as much water in winter as in summer, but they should have an opportunity to drink all they want in order that the bodily functions may be carried on properly. Icy water is not good, for the animals will not drink a sufficient amount of it, but it is not necessary to heat the water. Fill the water tank just before leading the animals out, then they will get the water at the temperature at which it comes from the well.

PROGRAM OF IOWA ABERDEEN ANGUS ASSOCIATION.

Beginning at one o'clock February 6th, at the Kirkwood Hotel, Des Moines, Iowa, the Iowa Aberdeen Angus Cattle Breeders' Association will carry out the following program:

Address of Welcome....Chief Justice Scott M. Ladd of the Supreme Court of Iowa.
Response by the President....J. V. Arney, Leon, Iowa.
"Proper Care of the Cow for the Purpose of Producing Good Calves"....Chas. Escher, Jr., Botna, Iowa.
"Proper Care of the Calf Until It is Ready for the Feed Lot"....E. T. Davis, Iowa City, Iowa.
"Care of the Calf from the Feed Lot to the Butcher"....H. J. Hess, Waterloo, Iowa.
"Care and Disposal of the Carcass from the Butcher to the Consumer"....Professor Pew, I. A. C., Ames, Iowa.
"Influence of Sire Over Progeny"....A. C. Binnie, Alta, Iowa.
"Care and Development of Bulls"....Sears McHenry, Denison, Iowa.
"Forage"....C. M. Russell, Carroll, Ia.
"Personal Experience on the Canadian Show Circuit"....O. V. Battles, Maquoketa, Iowa.
A general summing-up of the entire program....C. J. Martin, Jefferson, Iowa.
Question box.

This association has had a number of interesting meetings, but The Homestead believes that it has never in its history presented so attractive a program as the one outlined above. It will be noticed that in assigning topics men of standing and experience have been selected and it must be understood that after every topic an opportunity will be given to those in attendance for a full discussion. It is hoped that the attendance will be a record breaker.

Take the juice of a lemon and about a tablespoonful of salt and dissolve. Dip any rust spots in it and hang the cloth in the sun. They will sure come out.

The above engraving is made from a photograph of part of the herd of Hampshire swine owned by C. A. Brook, Washington, Iowa, who will hold a sale of bred sows on February 5th. If you are interested see page 48 and write for a catalog, mentioning The Homestead.

My Great Offer Still Good

A Pair of $3.00 Gloves or Mittens Free

I AM the man who startled the tanning trade last season by offering a free pair of mittens or gloves with each horse, cow, steer or bull hide which was sent to me to be tanned or to be made into a coat or robe. This offer was the best that was ever made by a tanning manufacturer. I was able to make it because I have reduced tanning to a science, having had 25 years' practical experience. Other tanning companies said that I would go broke if I kept it up. Before they got through talking, I made another big sensation in the tanning business. I not only gave my customers free mittens or gloves but I gave them greatly reduced prices, yet I haven't gone broke. On the other hand, my business is bigger than ever and I can handle goods cheaper than before. My modern plant can turn out more business than I believed was possible.

Free Gloves or Mittens.

H. B. MICKLE, President.

You Will Have to Hurry

I don't want to disappoint one of the many friends who want to do business with me this year yet I am liable to have to because my factories are rapidly filling up with work. I want you to write today for my best prices. I will quote you low prices on high-class work that cannot be gotten elsewhere. This I can prove to your full and complete satisfaction by a trial order. You take no risk in sending me a trial order as I guarantee everything. After you have received the goods back tanned and finished according to the Mickle process, you are not going to be satisfied but you are going to be delighted with the quality of my work. Mickle work is all hand work. No clumsy machines mangle your hides in our plant. That is why I can guarantee my work.

Get In on my Combination Mitten and Reduced Price Offer

If you have a hide ready, ship it to me today. You don't have to write in first to get the offer. It goes on everything received.

I am sure this offer is going to fill my factory clear full of work and that I will have to refuse some people. I do not want to refuse you, so please write today.

Mickle Fur Coat & Robe Company,

531 West 7th St., H. B. MICKLE, Pres. Mason City, Iowa.

This "Variable" Device Means More Corn

For years makers of farm machines tried to invent a corn planter with a reliable Variable Device—a machine on which the driver could instantly change the number of grains dropped, without stopping or getting out of his seat. Two years ago we announced the problem solved. So, 10,000 farmers have planted their corn with the new machine. And not one single planter failed to make good. Already each of the 10,000 machines has more than paid for itself. For the driver was able to plant extra kernels and get more corn where the soil was richer and to save seed where soil was thin or poor. And this machine can be instantly changed from edge to flat drop or back again. Hills are always straight and even—no matter how fast or slowly your horses walk, or who drives—yourself, your hired man or your boy. Our clutch is a wonder! The most positive ever made, bar none. Trouble-proof, too! And wears three to four times as long as others. Note the pictures and description of clutch in our catalog.

Note, also, the extra-quality materials we use; the perfect construction that comes only of painstaking, experienced experts. Note the special flexible connection to front frame. Adjustable width. Adjustable seat. Discs or runners. 30 or 36-inch concave, flat or open wheels.

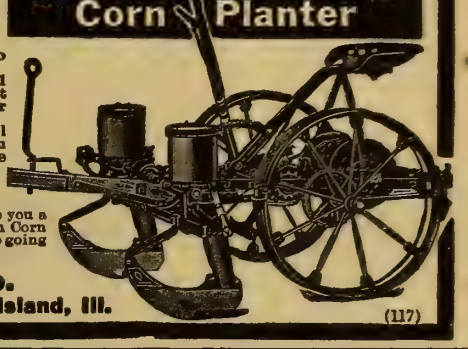
Then note that this planter costs no more than the ordinary kind.

Now, we want you to see a Rock Island No. 1 Planter. We want you to carefully compare it with other planters and then you can judge for yourself if it isn't five years ahead.

It will be easy to do this. Drop us a postal now and we will tell you the nearest place you can see this remarkable planter. At the same time you will receive our

Latest Catalog Free

And in addition to the catalog we will make you a free present of Prof. Holden's famous book on Corn Growing, if you write at once. The books are going fast and will doubtless soon be gone. Address



Rock Island Plow Co.

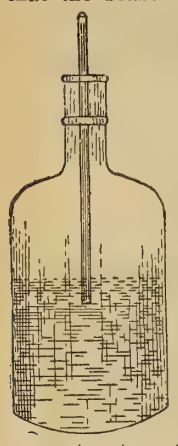
106 Badger Street 4 Milwaukee, Wis.

HINTS·SUGGESTIONS·DEVICES

We extend a special invitation to our subscribers to assist us during the coming months in making this department better than ever. Please send along a description, accompanied by a drawing, of any handy device you may have around the farm, or something that is connected with the home.

HOW TO CUT GLASS BOTTLES.

A farmer's wife wishing to preserve and jell several bushels of apples that were not keeping very well, found that the season for glasses and jars, was over, and she could not secure any. She made some as shown in the sketch. Empty bottles of various sizes were used, from one quart for jell glasses, up to one gallon water bottles for preserve jars. Warm lard oil was poured into the bottles, up to the point where she wished to cut off the top of the bottle, and a red hot iron rod was inserted about one inch down in the lard oil, the sudden expansion, caused the bottle to separate at or just above the line of the lard oil. As the oil can be used over and over again, the expense is slight. The rough tops were smoothed with a file, and paper used for covers.

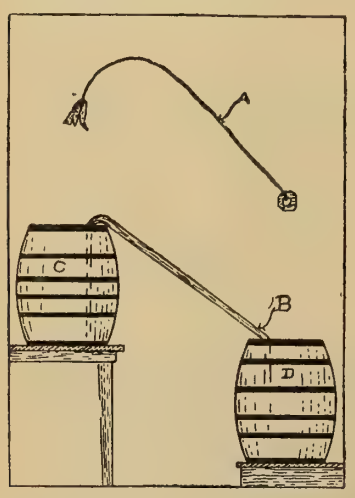


Handy Egg Tester.

A handy egg tester may be made in a few moments by tying a piece of heavy, black cloth over the end of a bicycle lamp as shown in the illustration. Cut a hole the size wanted for the egg, and place on a box or table where you can have the eggs handy, and the work can be done fast. The light is much stronger than an oil lamp, and if you will place the lamp on a box opposite the eye when seated, the work will be much easier, as you will not have to bend or stoop over.

How To Empty a Barrel.

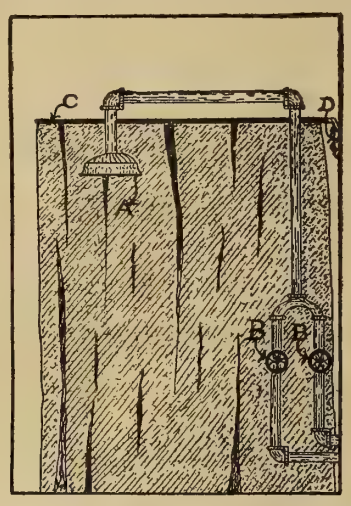
Many ruralists now buy gasoline and lamp oil by the barrel, and to empty same is no small job. The idea herewith illustrated will be found not only easy, but sure and safe. The barrel to be emptied is left in the wagon, or placed on a bench, so the lower end is just above the barrel or other vessel in which you wish to store the oil. A piece of three-quarter inch hose of sufficient length to reach from the bottom of the barrel to be emptied and across to the storage tank is secured and used as shown.



C shows the barrel of oil, D is the storage tank or barrel, and A is a stout cord some two feet longer than the hose, B. The cord has a weight such as a small tap fastened to one end, and a bunch of rags at the other end. Insert the cord in the hose, and allow the tap to pull it through, until the rags enter the end of the hose. Place the hose in the barrel, C, with the rags down, pull the cord and rags through the hose, and quickly insert the end in the tank or barrel D and the hose will empty the oil in a short time. The rags force out the air and the air pressure forces the oil in to fill the vacuum. The idea is a simple siphon, and the novelty is the manner of starting same by pulling the rags through the hose. A piece of soft rubber formed into a tight fitting disk answers the purpose so better than the rags. However, old rags are always at hand, and the rubber is not.

Home-Made Shower Bath.

The bath room can hardly be called complete without the shower bath, but the modern bath costs much money, and the man of moderate means can hardly afford one. Happily, however, he can construct a home-made shower that, if not quite as tasty, will answer the purpose just as well. To make one of these shower baths, disconnect the hot and cold water pipes from the tub, and by using two tees run a line of pipes as herewith illustrated, and again connect up the pipes to the bath tub. Arrange the pipes directly in the center of your tub. Fasten them neatly to the wall with fasteners made for the purpose. Have hot and cold water valves as at B B



and terminate the line into one pipe extending about six feet and six inches above the bottom of the tub and out to the center as shown. From the plumber or a supply house secure a shower head as shown at A and you have as good a shower bath as one can ask. All these pipes and fittings can be secured from any mail order house, and the cost will be not over $4 for all of it. You can make a diagram or drawing with a pencil and have the pieces all come cut ready for fitting. After the shower has been installed form a ring of one-half-inch iron, as shown at C and bend one end down as at D. Through two holes drilled here screw the ring to the wall. The opposite end of your ring should not quite meet at point D. The ring should be about thirty inches in diameter, and have a curtain of any water-proof cloth stretched around as illustrated. When not

Get 10 Bushels More Oats Per Acre Using The New Peoria Drill

You can do it and also save one-third of the seed because the Disc Shoe deposits all the seed in a packed bottom and properly covers it. No seed is left for birds to pick up or subject to the weather. Every seed sown by the Peoria counts. The Peoria Drill is fitted with many other features which make it superior to all others. The larger sizes, 12 to 22 have two levers instead of one—a great benefit to the driver. The levers are convenient to the seat, making the regulation of depth simple for even a boy to operate. We guarantee to furnish free any of the disc bearings that ever wear out.

The Peoria Sows All Varieties of Small Grain, Peas, Beans and Corn Without Injury to the Seed

Most drills have 42 or 44-inch wheels—The Peoria wheels are 48 inches with long hub and wide tires. Peoria Drills are made in 18 sizes—one for every man's needs. The practical sizes for Iowa and Illinois Farmers are the 12-7 which sows 7 feet covering two corn rows and the 18-7 sowing 11 feet, covering three corn rows. Send postal for "Treatise on Oat Raising" and catalog of Peoria Drills and opinions from men who have proved the superiority of Peoria Drills. Address

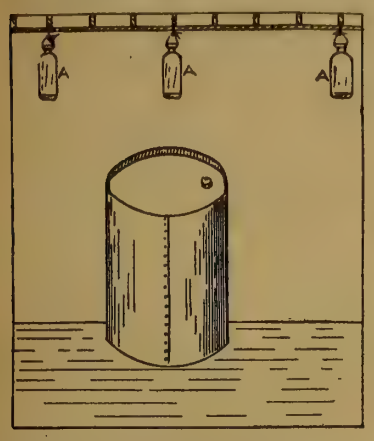
using the shower this curtain is pushed against the wall out of the way. By turning on either the hot or cold water your shower may be any temperature desired. Paint the pipes and fittings with any of the paints sold for painting bath tubs.

An Efficient Fire Extinguisher.

Where oil and gasoline are stored, fire is liable to occur at any time, and any means available to prevent said fires, should be used. Usually, we are all of us much too careless about such matters until after the first fire. One efficient way of prevent-



ing fires is to suspend one or more bottles of ammonia over and near the storage tanks, as shown in the accompanying illustration. Use bottles with very thin glass, and cord that has been greased. In case of fire, the cord burns, the bottle drops, brakes, and the ammonia fumes smother out the fire.

THE GOOD ROADS PROBLEM.

For thirty years the discussion of the good roads problem has been going on in the state. Many of the governors of the state within that time have called attention to the question and some of them have urged constructive legislation. Some progress has been made both in the way of better laws and in the improvement of the highways, but the most that has been accomplished is an aroused public sentiment in favor of better roads—perhaps in favor of permanent roads. Iowa will have permanent roads whenever she wants them. She will have better rural schools whenever she wants them. She will not have either before. Legislation awaits public sentiment—generally aroused, organized public demand. The next great era in the development of western civilization is going to be called by the historian The Era of Permanent Road Building. We are now at the very threshold of that era. We are face to face with the problem. No state can longer allow herself to be handicapped by mud. The economic waste is enormous. Not in the future can there be such a thing as a really great up-to-date state without good, permanent roads. The great cheapening of the cost of transportation to the markets of the country waits on permanent roads. The instant great increase in the value of land awaits the coming of the permanent road. There can be no complete solution of the country life problem in advance of the permanent road. The consolidated rural school will go halting and crippled until the permanent road passes the door. This is an ideal that will be realized in the future. How far distant it is depends upon the people of the state. This general assembly ought, it seems to me, to take hold of the problem with the end in view to ultimately realize this ideal. Nothing could contribute more to the greatness of the state and the welfare of all of the people. All that is done hereafter in the improvement of our roads ought to be with the view of permanency. Permanent culverts and bridges, permanent systems of drainage, permanent establishment of grades—all with the view of eventually receiving the permanent road. With this purpose in view the law should provide for the appointment of a county engineer. He should be thoroughly competent and not necessarily a resident of the county where appointed. There should also be created a permanent highway commission, composed of expert road men and engineers with such powers and duties in the way of the preparation of plans and specifications, estimates of costs, advertising for bids and general supervision and control as may after careful consideration be deemed wise. I can see no reason why provision should not be made for a referendum to the people of the question as to whether bonds of the state should be issued for the purpose of raising money for permanent road building. It would not incur a great expense to determine whether or not the people are ready to enter upon this work which would add more than anything else to the greatness of the state, and it would at least be of great value in causing universal discussion of the subject which must always precede any movement involving the change of long established methods and of thought. In the meantime our road laws, which now exist in a disconnected and patchwork form, should be revised, rewritten and strengthened for the purpose of securing the best possible temporary roads and for devising methods of administration looking to the coming of the permanent road. Selfish interests clinging to old methods and advantages, may be found in covert opposition. Permit me to suggest that you look carefully to this, as I know you will, to the end that private interests may not prevail against the common good.—[Gov. Geo. W. Clarke's message to Iowa Legislature.

How about staying on top of the mud, instead of down in the mud, this coming year? Wide tire steel-wheel trucks will help to do this, and also help to make better roads for your community. Get in the game for good roads. Ask for our free catalogue of instructions.

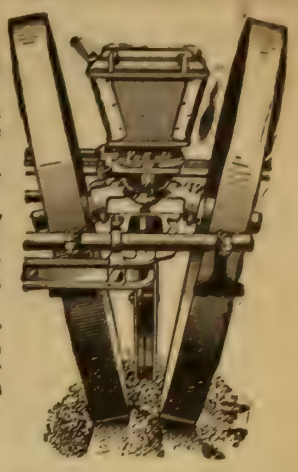
PATENTS that PAY. $557,580 made by clients. Patent book—"What & How to Invent—Proof of Fortunes in Patents" FREE. 112-p. Guide Free. E. E. VROOMAN, Patent Atty., 812 F Street, Washington, D.C.

Good Seed Isn't All—



Good seed and good soil is only the *starting point* in raising a big corn crop. You can no more afford to plant with an old worn out corn planter or a complicated new one full of fads and fandangles than you can to plant *poor seed.*

You can't afford to waste your time and labor or *risk your entire crop* with a planter that covers unevenly, misses hills or does not check accurately.

Uneven depth of planting means a bigger loss than many realize. It's *especially bad* in cold, backward seasons; often amounts to several times the cost of a planter in a single year. Avoid a planter that covers part of the corn so deep that no matter how good the seed or how rich the soil *many of the hills never come up*—or leaves other hills uncovered so that the sun and wind *destroy or stunt their growth.*

Hayes Four-Wheels regulate depth of planting to the fraction of an inch—this planter plants every kernel *exactly the same depth.* Here's why: Runners set back between the wheels, within 10 inches of the covering point. In going over ridges, dead furrows or uneven ground the shoe *rises and falls* with the wheels. **Hayes** planted corn all comes up at the same time, (proof of even depth of planting) and *allows earlier cultivation.*

Four-Wheels—Bigger Yields

Hayes Four-Wheels guarantee *surer germination and quicker growth.* Wheels pack the dirt from the sides to hold moisture and leave a ridge on top so that the corn sprouts quickly and comes up several days sooner. The ridge gives greater surface for sun's heat and prevents washouts in hilly fields. This method *assists the budding sprout.* protects its vitality and makes stronger and healthier stalks.

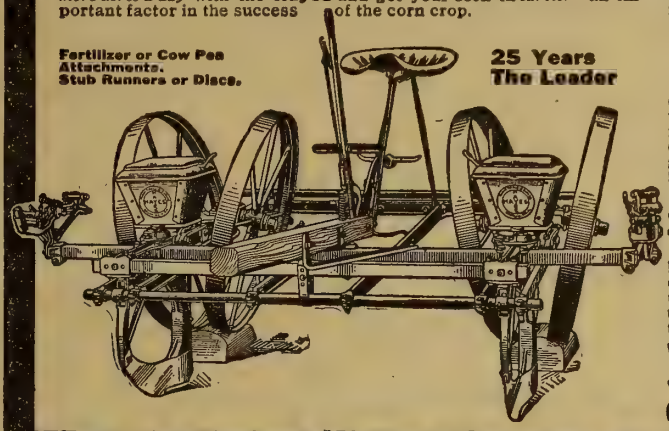
Hayes Four-Wheels *cover where all ordinary open wheels fail.* They open at the top and clean themselves. Guaranteed not to clog or carry the corn over even in wet and sticky soil. Insures a stand even in low wet spots of field and *allows earlier planting.*

Checks With Absolute Accuracy

No matter how fast you drive the **Hayes** *always plants in perfect check.* Cross rows are straighter than the way you drive. Easiest handled planter. Also shortest coupled, making it the *lightest draft* and turns in *shortest space.* For these reasons you can plant from *three to five more acres a day* with the **Hayes** and get your corn in *earlier*—an important factor in the success of the corn crop.

Fertilizer or Cow Pea Attachments. Stub Runners or Discs.

25 Years The Leader



Never Misses A Hill

The **Hayes** Drop *never fails.* It is the simplest, most durable and most efficient ever made. Fewer parts, less breakage and delays. Has no clutch to miss and give trouble. *Never cracks or grinds the seed.* Will drop accurately any size or shape kernel. *No bare spots* in **Hayes** planted fields. Increased yields soon pay for it. Corn growers are never disappointed with the **Hayes** *NEVER-FAIL DROP.*

160,000 Users Know

Thousands in use for years with practically *no repair expense,* and every one giving *time-saving, money-making* service. If the planter you used last year missed the hills, planted at an uneven depth, did not drop accurately, cut or cracked the kernels, scattered the seed, checked unevenly, clogged or was a constant source of trouble by getting out of fix, you can *save its cost* many times over by buying a **Hayes** Four-Wheel.

Think these things over and start investigating *NOW.* Learn the overwhelming advantages in **Hayes** Four-Wheel construction. *Ask any* **Hayes** *user.*

Learn the experiences of farmers who *have* increased their yields by big margins with the use of the **Hayes**—who *have* finished planting earlier—who *have* begun cultivation earlier. Every **Hayes** user will tell you the work is easier—faster—better; the results more satisfactory—more profitable. So much depends on the work of the planter that a farmer cannot afford to get anything less than the *best service.*

WRITE! This planter is *guaranteed.* It *must* be all we claim and all you expect. Send for Free Book "P" of Valuable Planting Facts. Write today, then you won't forget.

HAYES PUMP & PLANTER CO., GALVA, ILLINOIS

Hayes Four Wheel Corn Planter

SAVE 25 TO 50% ON HARNESS $25.00 FREIGHT PREPAID

For $25.00 we offer our Leader No. 53—1½ inch Team Harness set down at your railroad station. This harness, designed and made for durability and service is the biggest bargain we have to offer. While the price is exceptionally low for a harness of this nature, quality has not been sacrificed on that account. But, "after quality, it's the price that counts." In the harness here illustrated only the very best grade of Oak Tanned Leather has been used in its manufacture and our money-back guarantee stands behind every sale.

We issue a 100-page, completely illustrated catalog, jammed full of just such bargains as shown in the illustration.

Just drop us a card and we will send you by return mail one of these handsome books. We manufacture all our own harness in our spacious factory at Waterloo. This alone accounts for the rock bottom prices we quote—no jobber, salesmen, agents or brokers to split up the profit—just the manufacturing cost with one small profit added. This accounts for the fact that we are absolutely the largest manufacturers of harness and leather goods, selling direct from factory to user.

A comparison of quality and prices will surprise you. Write today to

SALZER'S Seed by actual Test Doubles the Yield

Has done so for thousands of farmers in New York, Ohio, Illinois, Indiana, Wisconsin, Minnesota, Iowa, Dakota, Kansas, Nebraska and other states east and west. Why not for you?

These farmers have the same soil as yours.
They work their land the same.
Why do they have larger crops?

Wheat Barley Corn Grasses Clovers Alfalfa Potatoes Oats &c.

Salzer's Seeds is the answer. Our seed is carefully tested for germination and vitality. It's pedigreed Added to that, it is northern grown, insuring thrifty condition and sure maturing. Salzer's Seeds cost but little. We sell direct—no commissions. We save you middleman's profits. Valuable premiums given on every dollar's worth you purchase make our seed the lowest priced reliable seed on the market.

Let us send our new catalog and Premium List for 1913 for you to read and be convinced. It has the biggest, best things in Farm and Garden Seed, Flowers and Nursery Stock. We list a large number of money-saving Flower and Vegetable Seed Collections that will delight you with their splendid variety and completeness.

Salzer's Hardy, Northern-Grown Alfalfa

Will grow where clover grows and three times more valuable as a food producer. One ton equals ten tons of timothy. Hardy as an oak. Biggest, quickest, most continuous money-maker for the farmer.

Salzer's Earliest Potato Collection

Four rare earliest sorts and one later. Separately packed, full weight, $3.90 per barrel. Farmers planting this collection have realized more than $100.

Salzer's Seed Corn

Golden Glow (Wisconsin No. 12) and Silver King (Wisconsin No. 7) have been brought to greatest perfection. These varieties have revolutionized corn growing in Wisconsin—making it first in yield per acre west of Ohio. A strong grower and matures early. Our seed for 1913 is extra choice.

Salzer's Rejuvenated White Bonanza Oats

Has a record of 259 bushels per acre. The most prolific oats in cultivation. Grain heavy and plump. Long heads. Straw stout and not readily lodged. We have made extra low prices for 1913, so that everybody will plant this great oats. Write for quotations from one bushel to one thousand bushels.

SUCCEED WITH SALZER'S SEED
10 Big Sample Packages 10c

For **10c** we mail big packages of Salzer's famous Alfalfa Clover, White Bonanza Oats, Silver King Barley, and many other packages fine farm seeds. **14c** Flower seed collection—six generous packages—brilliant bloomers, **14c.** Vegetable seed collection—six big packages—enough for a good garden—**16c.** Both collections for **25c**, or send **30c** and we add a package of wonderful new Earliest Red Riding Hood Tomato Novelty, alone costing 15 cents.

Our 1913 catalog is bigger and better than ever. Send for this catalog. It is free for the asking.

JOHN A. SALZER SEED CO. 124 So. Eighth St. LACROSSE, WIS.

BIG MONEY IN OATS AND HOW TO GROW

You can make big O-A-T-S money on your farm if you plant the right seed. Seed is everything, yet the smallest expense of farming. Last year those who planted our O-A-T-S got great crops—Nymeyer, Oak Harbor, Wash., 95 bushels to acre; Cling, Almos, Colo., 141½ bushels to acre (largest yield ever recorded); Richards, Dalton, Mich., 82½ bushels; Barnes, St. Anthony, Idaho, 119½ bushels—often more than double, sometimes trip'e their own common oats produced from same land. Our Free Book gives details—just packed with useful information.

This Seed O-A-T-S Germinates Nearly 100%

—Every seed sprouting, vigorous, hardy, full of life—with large kernels and thin hulls—not "weaklings" that yield only half crops at threshing time. Our famous Swedish Regenerated Seed O-A-T-S are grown on Galloway Bros. 1920-acre Canadian Farm from virgin soil. These oats weigh 48 lbs. to the bushel. Think of that! Plant these O-A-T-S this Spring and get this big O-A-T-S money in 1913.

FREE Book and Samples

Our wonderful book "BIG MONEY IN OATS AND HOW TO GROW THEM" tells all about these Seed O-A-T-S, how to plant, cultivate, and pocket the big O-A-T-S money. You can have it FREE. For 10 cents, to cover packing and mailing, we send a large FREE packet of our Big Money Seed O-A-T-S. For 25 cents a triple size packet. For 50 cents packet three times 25 cent size. The empty packets will be accepted as cash, to apply on your future orders. Write us at once.

HORTICULTURAL TOPICS

THIS department is conducted by an experienced horticulturist. All questions relating to horticulture will be answered if of sufficient general interest to warrant a reply in this department. Communications and inquiries upon horticultural topics should be addressed to this office.

PROFIT IN BEANS.

Why do we import annually such a vast quantity of beans to supply the home demand? Why do our farmers allow the ports of New York and New Orleans to be crowded with beans from the countries of southern Europe and almost every other part of the world? Why haven't they waked up to the abundant profit from easy crops of beans raised at home? The answer is, they have. Farmers all over the country are being roused more and more to the importance of this hardy, nourishing vegetable, its importance as a staple article of diet—wholesome and nourishing—and its value to the farmer as a safe and profitable crop.

But there is still an overwhelming demand with which home production has not coped. And with beans passing the $2.50 per bushel mark it behooves every thinking farmer to consider seriously whether or not he will share in these profits by growing beans on a good, big scale in 1913.

A fair idea of the possibilities in the total yield may be seen in the figures representing an output of only the three states of Michigan, New York and Wisconsin. The bean yield for 1912 in these three states alone amounted to 20,000 carloads, each having a capacity of 40,000 pounds, which means 800,000,000 pounds of beans.

And not only in these wonder-working states, but almost anywhere in the Union beans of one variety or another can be grown profitably.

It has been shown that they will mature successfully in all northern latitudes and many of the southern states have made excellent showing in the way of good bean production. More people are eating beans. It is no longer the laboring classes—those who are forced to economize who select beans as an article of steady diet. People are learning the remarkable nutriment of well-cooked beans.

American canners by vigorous exploitation have created a new demand for beans. They have brought people to a knowledge of the delicious flavor of beans when rightly prepared, as well as their rich food value. And, because of the trade they have thus built up, these industries consume annually quantities of beans so vast that they are almost unbelievable.

The market page, with its report of high and steadily increasing prices, is proving a decided encouragement to the farmer—is opening his eyes to the really tremendous possibilities in bean culture.

It is not necessary for him to specialize on fancy varieties. Simple white "navy" beans are gaining in popular favor at an extraordinary rate. They will grow in almost any soil. Wherever wheat and corn will grow—you can raise beans. From Maine to Florida every degree of latitude seems to suit this adaptable crop. In all the north central states these beans will thrive, and hundreds of thousands of bushels are raised in Illinois, Indiana, Iowa, Minnesota, Wisconsin, Ohio and Pennsylvania.

It is only recently that the world has begun to realize fully how much of the profits and prosperity of our northern states is based on the simple white bean. Farmers have learned, too, that old land is better than new for bean culture. That an inverted clover bed brings a full harvest. And that when grown in rows between clover and wheat, beans not only flourish of themselves, but fill the ground with nitrates.

For planting time there are no set rules, only the common-sense advice based on the fact that the bean seed needs warm ground. When once this is understood, the wise farmer bides his time independent of rule or date. The most successful bean growers of the northern states recommend planting about the middle of June. Experts agree that the plowing should be at least six inches deep. Since demand regulates supply, it is safe to predict for 1913 a far more general growth of enthusiasm among farmers

Is Your Home Sheltered?

Save dollars by saving heat. A wind-swept home is a cold home. Shivering cattle take on no fat. Cold hogs make the smallest gains. Wind-tossed chickens lay no eggs. Protected gardens get the earliest start.

TRANSPLANTED 100 EVERGREENS $7.50

that will keep pace with the way beans are growing in popularity and favor with every one.

From every point of view there is wisdom in the old saying about the man who "knows beans." Everybody ought to know them—from the consumer whose bone and tissue, brain and muscle are all enriched and improved by a diet of good, old-fashioned beans, to the farmer who in beans has an opportunity of raising a safe and heavy crop and of finding a ready market, at top prices.

TOMATO GROWING ON THE FARM.

To the Editor of The Homestead:

Wherever the tomato will thrive fairly well, it should certainly find a place in the farmer's garden, if not, indeed, in a larger way as a field truck crop. It has a wide range of adaptability—even wider than corn—as there are many sections of the New Northwest where corn cannot be matured to any extent, but in which large crops of tomatoes are produced. This is owing to the fact that in all sections of the country it is customary to start the tomato plants under artificial conditions in order to secure greater earliness of the crop. Hence, given this customary assistance, it will thrive where corn, melons and like crops, will not.

Many large growers of tomatoes use only a hotbed for such artificial aid; and a much greater number who grow them in a generous way for both home and market, do not even use the hotbed, but start the plants in boxes in sunny windows, and as the sun gets higher and warmer, move them out in the open sunshine for a few hours in the middle of the day. Very good plants may be produced in this manner, and they will have the merit of being hardened to outdoor conditions, which is not the case with the plant grown in the greenhouse, or even the one grown in the hotbed, unless in these cases a cold frame is used for this hardening process. Then too, tomato plants can always be bought at reasonable prices from the professional growers.

The tomato, as compared with most fruits, is an easy crop to handle. It ripens very gradually, so that the picking is distributed over quite a long period of time, and is a very quick operation anyhow. The total yield during this long season is simply enormous—much more than any crop of potatoes when conditions are furnished for best results in both crops. When early varieties are planted and are pushed along so as to be nearly ready for blossoming when finally set in the open ground, one can get a fancy price for the first few pickings, or until the main later crop comes forward.

Where the farmer is growing, say half an acre or more, it will pay to plant them rather far apart and check-row so as to do as much of the work of cultivating as possible by horse power. Four feet each way would be none too far apart, as the growth is so rank that put much closer, the cultivator would soon be driven out by the lopping down of side limbs. When planting in this check row plan, after marking, dig a hole at each intersection of the marking, almost as big as a half bushel measure. In the bottom of this hole drop a good big shovel of horse manure. Mix it up well with the dirt and then draw three or four inches of dirt over it. The plant bears for so long a time that it needs a reserve food supply, which the roots will reach rather late in their growth when the dry hot weather is on, and the roots are driven downward for moisture.

I have never found it very satisfactory to attempt pruning the tomato. It only induces a rank side growth from each junction of the side limbs with the main system, thus calling for more and more pruning. The only time I do any top cutting is just as the first ripening commences, when I go through with a corn knife and cut off a good deal of the top, so as to let the sun get a fair chance at the clusters of fruit.

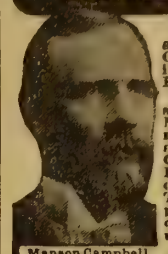
It will pay to get nice twenty-pound boxes in which to ship the first ripenings. The twenty-pound box takes just two tiers of good-sized tomatoes laid flat, bottom side up. If some of the fruit is a little too small, lay it up a little edgewise, one leaning against the other. The box must be a trifle over full so that the t n cover boards will be sprung a little, in order to get twenty-pounds in the box, and to prevent shucking of the contents. While there are many good early varieties, I prefer the Earliana. Subscriber.

One Dollar Is All It Now Costs to Have Your Seed-Grain Cleaned and Graded

$1.00 Brings It—Freight Prepaid

1913 Model

The CHATHAM Grain Grader and Cleaner



Manson Campbell

Now that farmers everywhere are cleaning and grading their Seed Grain, the question is, how to get it done *best, easiest* and cheapest. Here's my 1913 offer:

Send me one dollar and I will ship you, FREIGHT PAID BY MYSELF, this improved 1913 model Chatham Grain Grader and Cleaner with all equipment. Clean your Seed Wheat, Oats, Flax, Barley, Peas, Beans, Corn, Grass Seed, etc. Then PLANT those fine seed. AFTER you have harvested a bumper crop, pay me the balance of my low price. Not one penny need you pay, except the $1, until next November. And by November YOUR CHATHAM WILL HAVE MORE THAN PAID ITS ENTIRE COST in INCREASED CROPS. Then you'll have a "Chatham" to work FREE for you the rest of your life.

Your Dollar Returned

If you want it. I don't want your dollar or want you to keep my "Chatham" unless it pleases you. If, after a 30-day test, you are not satisfied, return the machine at my expense and I will send back the dollar.

A Machine That Fits Your Farm

After 40 years' experience, I know every grain and noxious weed grown in America. I know the section where each one grows. I know every grain and weed that grows on *your* farm. Experience has shown that a Grain Grader and Cleaner should have special equipment for the particular farming section to which it goes. For example, I send an *entirely different equipment of screens*, riddles and gangs to Maine from what I send to California. In fact, *there are scarcely 2 states in the U. S.* to which *I send the same equipment*. Thus you get the exact and proper outfit to handle the grains and weed seed that grow on *your* farm. You *don't* have to pay for a lot of extras for which you have no use.

Extra Screens and Riddles Free

In case you want more or different screens, just write me and I will send them free. Not a penny would I ask for extra screens and riddles.

I also have a Free Service Department which will separate, clean and grade FREE any mixture you send in. If you've got some impurity in your grain that you cannot get rid of, don't get discouraged. Write me.

Handles all Small Grain and Grass Seed

My 1913 Chatham handles over 70 seed mixtures—wheat, oats, peas, beans, corn, barley, flax, clover, timothy, etc. Takes cockle, wild oats, tame oats and smut from seed wheat; any mixture from flax; buckhorn from clover; sorts corn for drop planter. Removes foul weed seed and all sunken, cracked or sickly grains. Takes out all dust, dirt and chaff. It is also a bully chaffer. Handles 60 bushels grain per hour. Gas power or hand power. Easiest running mill on earth.

Special Corn-Sorting Attachment

Last year I added a Corn-Sorting Attachment, which grades corn so that a *round* or *edge* drop planter drops the right number of grains in 98 out of every 100 hills (in repeated tests at State Agricultural Colleges). Same planters, loaded with *ungraded* corn, make only 65 out of 100 perfect hills. In two months I shipped to Iowa farmers alone 4,000 machines with Corn-Sorting Attachments. Try my Special Corn-Sorting Attachment. *It will increase your corn crop amazingly!*

Postal Brings My New Book

on Seed Selection. Every chapter is highly practical and exceedingly interesting. It shows an easy, simple way to get rid of any weed on your farm; how to separate any mixture of grains—in short, how to get perfect grain for *sowing, feeding* or *marketing*. Send postal *today* and receive by *next mail* my new Book *free*. Address Dept 50

PLAN ORCHARD BEFORE ORDERING TREES.

To the Editor of The Homestead:

The agent for nursery stock is beginning to toot his horn in the land, and once more the farmer must order stock or almost insult him to get him to pass on. Many a farmer will fall a victim to this man with pictures of beautiful trees and apples and peaches that look good enough to eat. While the farmer cannot afford to be without a home orchard, he need not waste his money even if he does his time with fruit agents. He can endure the agent for a time and if he cannot get rid of him any other way he can call his dog.

In the first place, the farmer should not invest in trees until he thinks the matter over, decides on location of his young orchard and just the kind of trees he should purchase. Then if the agent calls he will know just what he desires and can soon give his order.

The best piece of soil near the home should be selected for the home or-

Great New Everbearing Macatawa Blackberry

This year you should grow berries. It's the thing that pays in commercial fields and in gardens. And to make your work count for the most, grow the heaviest yielders, the biggest, meatiest, best-flavored berries.

Macatawa Blackberry has all these qualities, and more. It's a brand-new sort, a cross of Eldorado Blackberry and true Giant Himalaya Berry. The berries are extraordinarily large—3¼ inches around one way, by 3½ inches the other. They begin to ripen July 1; the big pickings come just after July 1, and you get ripe berries until frost.

Berries are sweet even when green, free from core and seeds, meaty and altogether delicious, wonderfully good to look at, and just as good to handle, to ship and to eat—high-priced and profitable.

Plants Begin Bearing the First Year

and yield immense crops afterwards. They are absolutely hardy in 40 degrees below zero. Macatawa plants $1 each, or 6 for $5. Only 6 to one person.

Send today for the 1913 Berrydale Berry Book. Full of valuable Berry information. Contains true descriptions of the Macatawa Blackberry, of Himalaya Berry and many other profitable berries you ought to grow in your garden or fields. Let me have a card for the book today.

A. MITTING, Berry Specialist
BERRYDALE EXPERIMENT GARDENS
Iowa Avenue, Holland, Mich.

chard. If the farmer does not intend to grow fruit for the market, from twenty to thirty trees will be all he will need if his family is of average size. These trees should be placed about twenty-five feet apart each way, giving them plenty of room to develop and affording space for cultivation. The varieties of apples chosen should be the extra early, the medium and the late varieties. Two or three of the first kind will be sufficient. Select six or eight of the medium and let the rest be the late varieties.

In dealing with nursery agents one should be assured that they are wholly reliable and the firm they represent has a reputation for honesty. If one does not live far away from the nursery, it is no doubt a good plan to visit it and select your trees direct and not depend on the agent. Many a farmer has ordered his stock of trees from an agent and discovered when they came that they were a cheap, scrubby stock. And he may have found when trees began to bear that they were all of the same variety. W. D. Neale.

ADDITIONAL FIELD NOTES.

Harding's Great Col. Gano Sale.

One of the greatest attractions in Duroc Jersey brood sows that will be sold in a public sale this year will be the sale of R. J. Harding at Carson, Iowa, on February 3d, when he will sell forty of the best sows he ever drove through a sale ring. The greatest attraction of all, however, will be the seventeen head that will be bred to that remarkable of all great boars, Col. Gano. The Duroc Jersey world today has their eyes on this great boar and they have a right to have. At the fairs last fall Col. Gano held the attention of all the best breeders and it was their universal opinion that he was one of the greatest boars ever seen at the fairs. As a breeding boar his get have more than come up to expectations and his get in the various sales this winter are simply topnotchers. Mr. Harding is selling a full sister to that noted boar, Professor, in this sale, and she is bred to Gano. All of his show herd that made such a good showing at the leading state fairs last fall will be bred to Col. Gano. Twenty splendid fall yearlings, all sired by Chief's Protection, one of the greatest boars he ever bred and used in his herd, will be included in the sale, and these are good. Fifteen sows in the sale will be bred to his splendid young boar, R. J.'s Wonder, and this young boar was the top of the Sells fall sale and he was pronounced by all who saw him as a corking good one. If you are going to want Duroc Jersey bred sows whose get must necessarily be in the limelight you will make it a point to be at the Harding sale on the above date. Bids sent to M. T. White, Homestead representative, in care of Mr. Harding, will be properly handled on day of sale.

Lingford's Poland China Sale.

A Poland China event that will no doubt be of interest to many will be the sale that will be made by W. A. Lingford, Dannebrog, Neb., at Grand Island, Neb., on February 13th. Mr. Lingford is a man who has come before the public a great deal the past two or three years. He has been breeding Poland Chinas for a long time, but the rapid strides in the busines have been made the past two or three years. The writer is familiar with this herd, we had confidence in the sort of hogs Mr. Lingford was producing, and for this reason did not hesitate to recommend them to the best breeders in the country. The writer has been aware at all times that this herd of hogs were not the extreme big type, yet we have believed all along that they were large enough to make profitable hogs, figured on a pork production basis, and that it really was the only way to estimate the value of any strain or breed of hogs. The writer and this paper have been instrumental in placing a great number of boars from the Lingford at the head of pure-bred herds of Poland Chinas, and we are glad to say that, so far as we know, they have pleased all buyers and many of the best breeders, especially men in Illinois, are strong in their praise of the boars from the Lingford herd. Some of the very best Iowa breeders have purchased boars from this herd and the get of boars from this herd occupied quite a prominent place at the recent Iowa State Fair. A year ago, at the Nebraska State Fair, Mr. Lingford was one of the strongest exhibitors at the fair, and the get of his well-known herd boar, Golddust Hadley, won more places than the get of any other boar at the fair. In 1912 the herd was not quite so successful, yet some first places went to them and a number of seconds. The Nebraska fair is regarded as the only big-type Poland China show in the whole country, and it sure takes a good hog to win at this place. In the forthcoming sale of brood sows that will be made by Mr. Lingford there will be many of the daughters of Golddust Hadley and Pawnee Sampson, and everything offered will be bred to one of these two boars, or to Revenue Exception, a boar that Mr. Lingford purchased of J. W. Leeper, Norton, Kan., last fall. He is by Revenue Chief by Exception. He is one of the very best young boars of the country and sows of the above line of breeding mated to him should produce mighty well. We just wish to ask that you send for the catalog at once. Plan to be on hand sale day. It will pay you to do so. Mention this paper when writing for catalog. See advertisement on page 41.

The World's Greatest Guernseys.

Of the thirty-five Guernsey cows which in herds of American dairymen have produced more than 600 pounds of butter fat in one year a very satisfactory number have been bred and owned by Wisconsin breeders and are named in this list of cows and heifers producing more than 600 pounds of butter fat in one year. Those five years and over: Spotswood Daisy Pearl, 957.38 pounds of butter fat; Imp. Beauty of Park Farm, 898.82; Dolly Dimple, 876.34; Yeksa Sunbeam, 857.15, and Dolly Bloom, 836.21. Four and a half to five years: Dairymaid of Pinehurst, 910.67; Imp. Itchen Daisy 3d, 714.10; Standard's Morning Glory, 714.10; Penthesilia, 658.39, and Imp. Beauty II. of Maresquet, 657.29. Four to four and a half years: Honor Bright, 694.64; Yeksarose, 678.16; Yeksa Lind, 650.56; Lillian Bishop 2d, 649.01, and Imp. Violet of the Bourg II., 623.53. Three and a half to four years: Dolly Dimple, 906.89; Pearl Maiden of the Glen, 695.73; Nellie Tostevin of Mapleton 2d, 637.71; Queen of the Roses, 604.94, and Robiline 2d, 603.59. Three to three and a half years: Dairymaid of Pinehurst, 860.26; Sweet Maria, 682.86; Rutila's May Rose, 655.93; Dolly Bloom, 623.94, and Emma McPeake, 604.96. Two and a half to three years: Azucena's Pride 2d, 706.46; Rose of Langwater, 669.89; Yeksarose, 638.49; Imp. Rouge II. of the Brickfield, 612.53, and Lily of Helendale, 600.49. Two to two and a half years: Dolly Dimple, 703.36; Langwater Princess, 651.19; Langwater Dorothy, 649.78; Langwater Dairymaid, 631.50, and Langwater Nancy, 630.60. These cows which have outranked all others in production have, on the average, produced 13,349.18 pounds of milk and 706.78 pounds of butter fat. The American Guernsey Cattle Club was the first organization of its kind to establish an Advanced Registry on the basis of annual butter fat production. There are now 2,000 cows enrolled in this register.

The Grand Island Hereford Sale.

The sale of Hereford cattle that will be made under the management of Mousel Bros., Cambridge, Neb., and which will be held at Grand Island, Neb., on February 14th and 15th, promises to be one of the greatest Hereford sales held in Nebraska for some time. The consigners are men who have attained national reputations in the breeding of high-class cattle and they wish to assure the buyers that they will bring forth only such cattle as are fitting representatives of their respective herds. The demand for choice Hereford cattle has been such that most of these cattle would have been sold ere this at private treaty, but these men wished to make a public sale that they would have an opportunity of meeting more of the breeders and stockmen interested in this great breed of beef cattle, and at the same time place before the buyers the opportunity to select the best from the various herds and at one expense. The writer sincerely hopes that the buyers may appreciate this fact and turn out in sufficiently large numbers that these public-spirited stockmen may not be disappointed. That these cattle may sell high is not the wish of the consigners, but they would like to see a fair valuation placed upon them, and with the great number to sell the buyers are assured that they may get them on this basis, for there should be enough for all. Of the seventy head of bulls to be sold there are some that are as high class as the writer ever saw go through a sale. They are headers for any herd. The females are all selected from good foundation material, are all young and in just the right shape to go out and do a buyer a lot of good. We believe we are entirely safe when we say that we are of the opinion that a buyer may select a number of females at this sale, keep them for a matter of four or five years, establish a herd of choice cattle and at the end of that time realize on the beef market all that they would now cost. It is true that beef cattle are now high, but the indications are that they will be much higher for the next half dozen years at least. The writer has been identified with the beef cattle industry for a number of years and we do not believe that we were ever confronted with more favorable conditions for the future of the pure-bred cattle business than right now. We believe it will be a good business move to attend this sale. We would like to see the sale catalog in the hands of every good stockman and it is ready for distribution. Send for it today and mention The Homestead when you write. See page 46.

WHITING'S HARDY NURSERY STOCK

SPECIAL OFFERINGS

Don't order your nursery stock until you have seen our new catalog of special offers, more bargains, collections and premiums than ever. Better write at once.

"DAKOTA GROWN EVERGREENS"

Drouth resisting and thrifty. Famous Black Hill Spruce, the hardiest grown. Packed by our special "earth ball" system, giving the trees no check in growth. These tress will grow when all others fail.

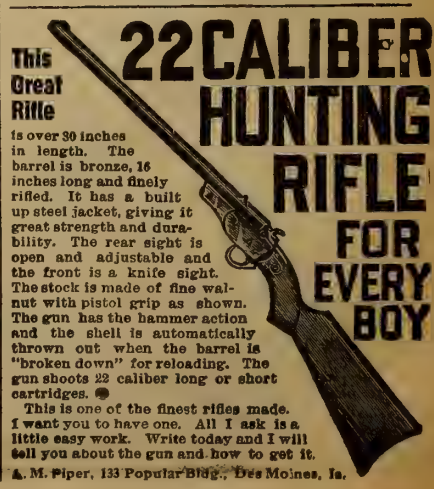
W. C. BRYANT, PRINCETON, ILLINOIS

This Great Rifle

22 CALIBER HUNTING RIFLE FOR EVERY BOY



is over 30 inches in length. The barrel is bronze, 16 inches long and finely rifled. It has a built up steel jacket, giving it great strength and durability. The rear sight is open and adjustable and the front is a knife sight. The stock is made of fine walnut with pistol grip as shown. The gun has the hammer action and the shell is automatically thrown out when the barrel is "broken down" for reloading. The gun shoots 22 caliber long or short cartridges.

This is one of the finest rifles made. I want you to have one. All I ask is a little easy work. Write today and I will tell you about the gun and how to get it.

A. M. Piper, 133 Popular Bldg., Des Moines, Ia.

Lower Prices Than Ever Is My 1913 Offer

MADE POSSIBLE BY A WONDERFUL SAVING IN FUEL EXPENSE

I've cut my power bill in half—**square in half**—and made a whole lot of other big improvements besides, which mean **money to you**—money to every man who buys a Galloway Manure Spreader, Cream Separator or Gasoline Engine. Power costs money—coal comes high—fuel is one of the biggest expenses a manufacturer has to contend with. I've cut all this tremendous expense in half. I've got a new power plant using the shavings from my manure spreader factory for fuel. These shavings used to be a dead loss—today they mean **a big saving.** This new power plant means thousands of dollars cold cash saved—**the biggest cut in the cost of production I ever made.** And this great saving, which to any other manufacturer would go to boost his profits, I am going to turn right back into your own pocketbooks by **my 1913 lower-than-ever prices.**

We Make THREE Machines Today Where We Used to Make Only ONE

Right **now** I'm making **THREE** Gasoline Engines, **THREE** Manure Spreaders, **THREE** Cream Separators where I made **ONE** before—and I've got to make the **lowest prices ever heard of** in order to sell them. I'M DOING IT! That's why I want you to fill in, cut out and mail the coupon to me today, so I can send you my great 1913 price-slashing offer. It's the biggest and best proposition I have ever made—a proposition that other manufacturers dare not attempt to duplicate.

Remember Just as fast as volume goes up **down** come my prices. That's always been my way of doing business. Now get my prices—they will open your eyes. Send me the coupon. Write for my catalogs and big illustrated free books. Do it today. I want you to take advantage of my big unheard-of offer right now and

Buy a Galloway Gasoline Engine, Manure Spreader or Cream Separator Direct from the Factory and Save 30 to 50%

Besides this big slice off the price—this additional cut I'm making because of cutting my power bill in half—you always save 30 to 50 per cent on goods of better quality when you buy of me—simply because I sell direct from my factory to your farm. Not a penny goes to middlemen. You get every dollar's worth of your money in gasoline engine, or spreader, or whatever you may buy from me. It's not guesswork—it's actual dollars saved for you.

I Challenge

the trusts or anybody else to show any untruth in my statement when I say that selling through jobbers, dealers salesmen or agents adds extra profits to the cost of the goods you buy of them. **I challenge** every middleman in the country to equal the low-price, high-quality gas engines, manure spreaders and cream separators I am making and selling. I'll give the man who successfully meets this challenge **a check for $25,000** the day he does it. This money is ready, in gold, in the Blackhawk National Bank of Waterloo. When one of these smooth salesmen comes around talking tell him about this challenge. Show him how easy it is to pick up $25,000. See what he says. I know. I've got him backed off the boards—both on price and quality. They haven't got a chance—trust or no trust.

I Save You $50 to $300 On THE BEST GAS ENGINE MADE

Galloway Engines are so simple in construction that a child can run them. They are made so strong that they simply can't break or get out of order. They run so economically that they do big jobs for a few cents. They *start at a touch* even in the dead of winter. They are always *under-rated, never over-rated.* And I make you the most liberal *free trial offer* made by any manufacturer of gasoline engines. I ask you to

Use It Ninety Days Free! Let it saw wood, pump water, shred and shell, grind feed ninety days straight, 24 hours a day if you want to. Then, if you don't think it's the greatest engine you ever saw tell me so. I'll take it back; not a cent's charge for the use you have had of it. And I'll pay the freight charges to boot. If you keep it, and I know you will, I let you

Make Your Own Terms! Pay just as you like. Your credit is good with me. Just mail me the coupon and I'll send you my big Free Engine Book; also my latest price-chopping offer.

I Save You $25 to $50 on a Cream Separator

Now's your chance to get together with me on the greatest separator offer ever made—by me or anybody else. It's a chance to get a separator that's got 'em all beat when it comes to **easy running, close skimming, ease of cleaning and durability.** Here are a few facts about this

Famous Bath-in-Oil Separator of mine: It is self-oiled. The lower gears run in oil, and there is a constant spray of oil over all working parts. In addition, there are any number of points of superiority which are described in my FREE Book on Separators. Send the coupon for it. And I give you a

90 Days Free Trial Use it 30, 60 or 90 days at my risk. I don't ask you to lay down a penny until you're satisfied. Then make your own decision. But first get my offer. It's a sizzler!

I Save You $25 to $50 on a Manure Spreader

A spreader so far ahead of any other spreader made that there's no comparison. I've got the patents on the **vital parts,** the parts that mean success or failure. I want you to get my price-slashing offer on this wonderful spreader, and I want you to use this spreader itself

90 Days Free on Your Farm Right Now in the winter time! Load it with frozen manure; load it a foot above the box. Start your horses trotting. Slam in the gears. Say! you can't smash this spreader of mine! No other spreader made can handle frozen manure. **Mine will!**

It Simply Can't Be Equaled Pay for it on your own terms, and then at the end of the year, if you aren't satisfied it's been a big paying investment, just say so. I'll take it back, give you every cent of your money back, and pay you 6 per cent interest more. Now, get my special low 1913 prices. Get my book "A Streak of Gold" and decide for yourself.

Now Get This Latest 1913 Price-Making Offer—Biggest Yet

It's FREE I want you to know how I'm able to make such startling low prices. I want you to know how electricity has cut my power bill in half, and what this means to you in saving. I want to tell you how to get

Your Extra Slice Off Galloway's Melon Now, then, you're interested in gas engines, or cream separators or manure spreaders, or something else you need on the farm, and there is just *one way* for you to get my new prices. *Send in the coupon on this ad.* Send it quick. *Don't wait!* Mail this coupon to me, *personally, now!*

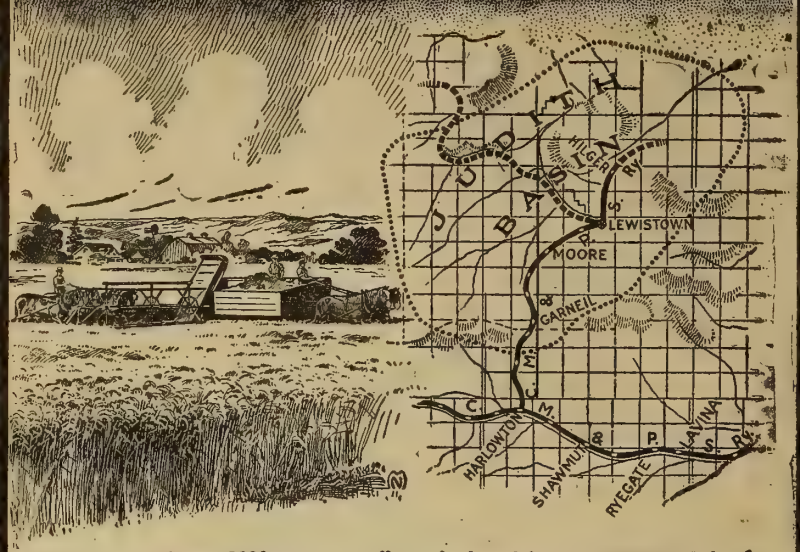
The JUDITH BASIN
Central Montana



Comprises about 2000 square miles of the richest agricultural land in Montana, surrounded almost entirely by a rim of mountains — is famous for its immense yields of wheat and won the prize cup at the recent New York Land Show for the best wheat grown in the United States.

Ample rainfall — fertile soil — long hours of sunlight during growing season makes this district unusually adapted for the production of all grains.

Wheat yields per acre 30 to 50 bushels, oats 60 to 90 bushels, rye 25 to 35 bushels, flax 12 to 20 bushels, potatoes 150 to 400 bushels. The richest sections of the Judith Basin are traversed by the new transcontinental line — the

Chicago, Milwaukee & St. Paul
and
Chicago, Milwaukee & Puget Sound
Railways

New lines now under construction, from Lewistown to Grass Range, Lewistown to Winifred and Roy, Lewistown to Great Falls and Chouteau, will open up a new territory equally as productive as the older sections of the Judith Basin.

Vigorous Horses Make Farming Easy and Profitable.

ABSORBINE

TRADE MARK REG. U.S. PAT. OFF.

Prevents fatigue, stops pain and lameness, reduces swellings and inflammations, strengthens the muscles and ligaments and keeps out soreness. In short, enables you to get 100 per cent of the work there is in your horse and they will give it with a vigorous pleasure. Horses and men both can stand a large amount of hard work when their health is good. Absorbine will keep your horses healthy if used regularly as soon as any trouble develops. The horses can be worked while the treatment is going on.

Absorbine is a mild, pleasant liniment to use—it is healing, soothing and invigorating and a positive Antiseptic and Germicide.

USE ABSORBINE to remove **Bursal Enlargements, Bog Spavins, Thoroughpins, Puffs, Shoe Boils, Capped Hocks, Swollen, Painful Swellings** and affections; to cure any strain or lameness; to repair strained, ruptured tendons, ligaments or muscles; to strengthen any part that needs it. You can buy Absorbine at regular dealers, price $2.00 per bottle or sent to you, express prepaid with full instructions. Write me about any case on which you would like advice. Horse book 3A free. Manufactured only by

W. F. YOUNG, P. D. F., 391 TEMPLE STREET, SPRINGFIELD, MASS.

The Easy Louden Way

The harder you work the **Louden Hay Carrier** and the heavier you load it, the better it shows up. You can't break it down—years of hard service won't send the

LOUDEN HAY CARRIER

to the repair shop. It lasts a lifetime. Its lock has a square catch and cannot possibly wedge or fail to work. The powerful wheel arms will never spread. All twist and kink are let out of the rope by our simple patented rope swivel, the only successful swivel on the market. Won't bind on the track, has adjustable stops.

The **Louden Balance Grapple Fork** is the best fork ever built. Will handle dry clover, alfalfa or thrashed straw where all others fail.

The **Louden Hay Carrier** and **Louden Grapple Fork** will work in any barn and handle all kinds of hay with more satisfaction than any others. See them at your dealer's—if he does not have them, write us.

Send for catalog of complete barn and cow stable fixtures—**Hay Carriers, Door Hangers, Litter and Feed Carriers, Cow Stalls, Cow Stanchions** etc.—also our FREE BOOK on the value of manure and how to care for it.

FAIRFIELD, IOWA

NEWS OF THE SALE RING

Paulsen's Hampshire Sale.

A splendid crowd of farmers and breeders were in attendance at the sale of Hampshire bred sows made by C. P. Paulsen, Nora, Neb., on January 25th. The large sale barn was filled to overflowing, and while a lot were simply spectators, yet a great majority of those present were there to buy hogs. The demand was brisk throughout the sale, and no doubt a great many more could have been disposed of without surfeiting the crowd. It was the first notable Hampshire sale in Nebraska and it was encouraging to the breeders of the belted hogs, for the keen demand and the widespread interest manifested goes to show that there is now a strong market for those hogs throughout the West, and the many new herds that have been started the past season as well as at this sale is another evidence that this demand will continue for some years. Probably the best bargain of the sale was Lot 1 of the catalog. She was Golden Maid 3d by Clare's Duke and out of the great breeding sow, Golden Maid. She was a show sow of the right order and comes of a family of show stock. She was purchased by A. J. Dvorak, Madison, Neb., at $180. R. D. Fentirmen, Elmwood, Neb., was also a liberal buyer and a bidder on all the good ones and was a contending bidder on Lot 1. J. E. Harding & Son, O'Neill, Neb., were also after the better ones and were among the heavy buyers of the sale. Colonels Reppert and Mason conducted the sale, assisted by Colonels Teeters and Littell. Colonel Reppert has acquired a great reputation as a seller of Hampshires, having made nearly sale of note of the breed. Colonel Mason acquitted himself with distinction in this particular sale. Those selling for $45 or more are listed:

1. A. J. Dvorak, Madison, Neb. $180.00
3. A. L. Reichsteim, Campbell, Neb. 60.00
4. W. V. Harvey, Culbertson, Neb. 75.00

Marts' Duroc Jersey Sale.

B. C. Marts, Hampton, Iowa, held his annual sale of Duroc Jerseys on January 22d and made a very successful sale. W. Golly, Zearing, Iowa, topped the sale on No. 1, an extra good show sow by Chief's Model, at $125. The prices ranged from $30 to $100 and it was an even sale all through. Mossman Bros. did the selling in a very creditable manner. A list of the sales follows:

1. W. Golly, Zearing, Iowa.....$125.00
2. R. M. Skillen, Green, Iowa.. 71.00

CURES LAME HORSES

While They Work
Without Leaving a Scar or Loss of Hair.

Rude & Son's Duroc Sale.

Quite a good crowd attended the R. Rude & Son sale at Moorehead, Iowa, on January 22d and they disposed of forty-one head of Durocs at an average of $39. They put up a splendid lot of sows in excellent condition, and while the prices were not high, yet they were very satisfactory. Col. N. G. Kraschel cried the sale. Below we list those selling for $35 and above:

ADDITIONAL FIELD NOTES.

Jones' Big-Type Sale.

On Monday, February 10th, at Dunlap, Iowa, A. D. Jones will sell seventy head of his great big-type Poland China brood sows, and he has about as much of the blood of the great big ones as any other breeder in the central West. In fact, there are few catalogs that you will look through where you will find as much strictly large-type breeding as Mr. Jones will list for this sale. He is selling three daughters of old King Mastodon in this sale, also daughters of the 1,000-pound Miller's Tecumseh, Long Choice XX., Orange Price, J.'s Dry Creek Wonder, Miller's Chief Price, and these are all out of dams bred by John Miller and Peter Mouw. These will be bred to such noted boars as J.'s Dry Creek Wonder, Orange Price, Miller's Tecumseh, Mohawk Chief, Long Choice and a young boar sired by Miller's Tecumseh. There isn't a sow or a boar used in his herd that does not trace in all their lines to the strictly large-type breeding. He is selling six head of his very best tried sows and the remainder will be yearlings and spring gilts. There will be six very excellent spring yearlings, forty-five big summer and fall yearlings and the balance will be large spring gilts. There will be sixteen head of daughters and granddaughters of old Minnie Fair in the sale, and she was one of the greatest sows of the breed. These will mostly be bred to J.'s Dry Creek Wonder, one of the greatest boars today in western Iowa. Many of the sows in his sale will carry four crosses of old Chief Price, others to Miller's famous Dry Creek Chief and Choice by old Chief Leader, Long Price by Mouw's Longfellow and other famous sires. Mr. Jones offers a good line-up of strictly big-type breeding and if you want that kind you will be interested in this sale. Write for his catalog and mention The Homestead. Bids sent to C. C. Carlin or M. T. White, in care of Mr. Jones, will be looked after on day of sale. See advertisement on page 44.

Peery's Poland China Sow Sale.

J. M. Peery, Alvord, Iowa, holds his sale of big-type Poland Chinas on Friday, February 14th, and closes one of the grandest circuits of brood sow sales of the year with an offering that is as distinctive as one would expect from a practical hog man whose hogs were always good ones. Right here we would like to have it understood that Mr. Peery should have the same crowd as that which shall attend any of the other sales, because of the sows he will sell. In his experience as a breeder he has sold sows to breeders of discrimnation and not yet has he failed to please. The output of one practical man is certain to please another practical breeder and Mr. Peery is certainly right in that class. His sows show it, his whole herd shows it. He enjoys the confidence and trade of his neighbors because he breeds that which suits their needs. Since this is the object of all breeding, Mr. Peery's herd is given one of the strongest recommendations that it could have. The blood lines are the popular and profitable kind, as the catalog will show. The herd boars are Peery's Long Orange by Big Orange, out of Long Kit by Beauty's Jumbo, making him a full brother to that other big-boned sire, Bloemendaal's Big Black Jumbo. He is a proven sire and a good boar. Jessie's Chief by Lyon Chief, dam Gentle Jessie, one of Mr. Barker's greatest brood sows, is a full brother to Mondamin Master, the boar owned jointly by Held Bros. and E. S. Barker, and the sire of the futurity pigs which won first at Des Moines last fall. He is a big boar and one that breeders will like. His dam is by King Dodo. Peery's Expansion by Great Expansion, a show boar, and out of a Chief Price sow by Orange Chief is the third of the boars and completes an exceptionally good trio. The sows represent the best of the big type and are thrifty, in the condition one expects a brood sow to be to go any place and pay out well on the money invested. Be sure to look this offering up in your search for sows to fill out your herd. When you write for catalog mention The Homestead. Ray L. Gribben is the field man and will handle your bids conscientiously. Address J. M. Peery, Alvord, Iowa. See advertisement on page 42.

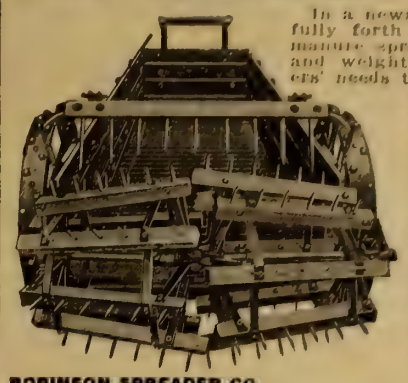
Koenig's Great Duroc Sale.

One of the most constructive breeders of Duroc Jersey hogs in Nebraska is H. H. Koenig, DeWitt, Neb., and a young breeder who has profited much by his example is Chas. H. Koenig, Plymouth, Neb. These gentlemen will make a sale of Duroc Jersey bred sows at the farm of the former on February 13th. It will be an offering that will contain many high-class hogs, in fact, many of them are outstanding. They are the get of good sires and mated with good boars. Chas. H. Koenig consigns about fourteen head to the sale and they are all the get of Advancer Chief by Chief Advancer except one, and this boar also sired a few that went in the sale a year ago and were among the tops of the offering. The great boars, A Crimson Wonder by old Crimson Wonder, Belle's Chief by Red Chief I Am, Echo's Chief by Echo Top King and a few others are the sires of most of the offerings. They are mostly bred to King's Crimson Wonder and Red Model and a son of H. A.'s Choice Goods. King's Crimson Wonder we will have to mention in particular, as we consider him one of the greatest young boars of the year. He was the top pig in the Beem dispersion sale and we have long regarded him as one of the best we knew of. He is remarkably heavy boned. One of the two heaviest bones we know of, and he is smooth and well finished. He was sired by I Am A Crimson Wonder 2d and out of the champion sow, Current Blossom. Red Model is a son of Golden Model and out of Miss Hope, making him a full brother to the great sow, Model Queen. Red Model was used extensively in the herd of John Bader, Scribner, Neb., and sired a great line of stuff for that gentleman. The writer would like to see a good gathering of breeders at this sale, as we believe these hogs will please those looking for good ones. It is the last sale of the circuit for that week, following the sale of J. C. Theobold, Obiowa, Neb. If you do not have the catalog send for same at once. Mention this paper when you write. See page 44.

Weaver's Duroc Jerseys.

S. L. Weaver, Lake Park, Iowa, holds the third sale of the Northern Iowa Duroc Jersey Circuit at the farm, three miles southwest of Lake Park, on Thursday, February 6th. He will sell forty-two head of sows, but contrary to the usual arrangement has for a majority of his offering tried sows, the gilts numbering only eighteen to the twenty-four head of older stock. Mr. Weaver has been breeding Duroc Jerseys quietly for a few years and his son, S. C. Weaver, has been the active member of the firm of Weaver & Fountain, of Montgomery, until last fall. This offering will include sows from both the Weaver, Sr., and the Weaver & Fountain breeding. Perhaps one of the leading characteristics of both these herds has been the fact that the hogs have been kept on the place for purely business purposes and have had to pay their way in a practical manner. This always means that the sows are big and stretchy, the litters they farrow must be large and the sow capable of raising them, or she goes to the market. Because it has been stated that the herds have been managed along these lines does not bar the use of good breeding, and it does mean the selection of good individuals for herd-heading purposes. Both the Weavers have chosen the best from herds with which they were acquainted, an example being the old herd boar now at the head of the breeding list, Okoboji Col. He is by Palo Alto Col. by Col. Stoner by King of Cols. and out of a sow by Inventor and second dam by Proud Advance. As mentioned in last week's paper, the other young herd boars are also well bred, coming from some of the best herds in the country. Helen's Chief Col. came from H. E. Browning's herd and represents some of his best blood. The distribution of the breeding is as follows: Ten aged sows bred to the prize-winning old boar, Okoboji Col. 104819, eight aged sows and gilts bred to Helen's Chief Col. 116265, thirteen bred to Crimson Wonder Perfection by Crimson Wonder Again, two gilts by Crimson Wonder Again bred to Queen's Col. and nine bred to Imperial Crimson Wonder by Crimson Wonder Again. Write for catalog, mentioning The Homestead. Ray L. Gribben will represent The Homestead at the sale. Address S. L. Weaver, Lake Park, Iowa. See advertisement on page 49.

The Spreader That Spreads.



In a newspaper advertisement we cannot set fully forth the merits and advantages of this manure spreader. Its size and style and width and weight make it more suitable to the farmers' needs than any other on the market. It has a capacity of 60 cu. ft. It is low and easy to load, the front and hind wheels track with each other and track with a farm wagon. Being narrow, it is handy to drive into a barn and easy to back into a shed. Its weight is 1,420 lbs. and two good farm horses handle it easily under all ordinary conditions. Its operating parts are simple, strong and serviceable, guaranteed to do the work a manure spreader is intended to do. The sectional cylinder rotates outwardly and spreads to the width of the wheel tracks. It is an ideal spreader. Your implement dealer should handle it. Write for our latest folder describing it. Address

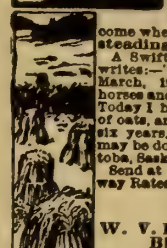
MRS. FARMER! Have your husband write for our free literature on choice Northern Minnesota Lands near Duluth. Land Com'r., D. & I. R. R. R., 116 Wolvin Bldg., Duluth, Minnesota.

YOUR OPPORTUNITY
Is NOW In the Province of
SASKATCHEWAN
Western Canada

Do you desire to get a Free Homestead of 160 Acres of that well known Wheat Land? The area is becoming more limited but no less valuable.

New Districts have recently been opened up for settlement, and into these railroads are now being built. The day will soon come when there will be no Free Homesteading land left.



A Swift Current, Saskatchewan farmer writes:—"I came here on my homestead, March, 1906, with about $1000 worth of horses and machinery, and just $35 in cash. Today I have 900 acres of wheat, 300 acres of oats, and 60 acres of flax." Not bad for six years, but only an instance of what may be done in Western Canada, in Manitoba, Saskatchewan or Alberta.

Send at once for Literature, Maps, Railway Rates, etc., to

Frank H. Hewitt, Des Moines, Iowa.

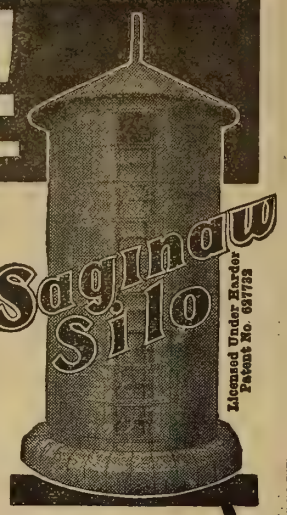
REGISTERED Shropshire rams and ewes of the best breeding and quality. Prices reasonable. **Willard Miller, R. F. D. No. 2 Aulta, Iowa.**

Wonderful!



The New 1913 Saginaw With the Patented Angle Steel Rib

Last season's Saginaw Silo was pronounced **utterly perfect** by dairymen and stockmen all over the country. For 1913 it was wholly unnecessary to attempt improvement. Yet, despite this, we come out with this 1913 Model. The big feature of the 1913 is the **ANGLE STEEL RIB.** This ingenious invention adds about 50 per cent to the life of a Silo. And that's wonderful, when you consider that the Saginaw is already known to be the strongest and most durable Silo ever built.

Doing the "Impossible"

The Angle Steel Rib has done what other Silo makers only a year ago considered impossible. It has given you Dairymen and Stockmen a Silo which the heaviest wind storms can't even SHAKE or TILT. All because the Angle Steel Rib absolutely prevents any up-and-down slipping of the staves. Moreover, this marvelous invention forever ends the remote possibility of your Silo caving in when empty.

This Angle Steel Rib is a Structural Steel Reinforcement, curved to the circle of the Silo. It is slidingly received in strong, malleable brackets which are securely attached to alternate staves. Each rib is free to move and adjust itself to any variation in the diameter of the Silo. Built on the same structural principle as the big "I" Beams used in giant steel frame buildings. One flange reinforces the other.

Think what it means to have these trustworthy, unbendable Angle Steel Ribs encircling your Silo! To fully appreciate the patented Angle Steel Rib, you must get our new free Silo Book, which pictures and explains all.

Other Noted Features

The Saginaw was famous first as "The Silo With the All-Steel Door Frame." Then followed the **Saginaw Inner Anchoring Hoop.** Next came the celebrated **Saginaw Base Anchor.** And now comes the **Angle Steel Rib**—the most astounding feature of all.

5 Big Factories

The Saginaw is far the most popular Silo on the market. Five mammoth Silo factories have had to be built. Last season we received orders for 587 Silos in a single day.

Strong as a Skyscraper

The Saginaw Silo, with its steel frame, stands as solid as a modern city skyscraper. It cannot blow down; it cannot twist; it cannot warp; it cannot collapse; it cannot shift on its foundation. Like a Giant Oak, it is rooted to the ground by the Saginaw Anchoring System.

Bright, Clean Silage

No rank, soured silage ever comes out of a Saginaw. It is sweet and pure clear to the edges, right next to the walls. Animals love the enticing flavor and thrive wonderfully on the rich, succulent food. Don't get a Silo that spoils silage.

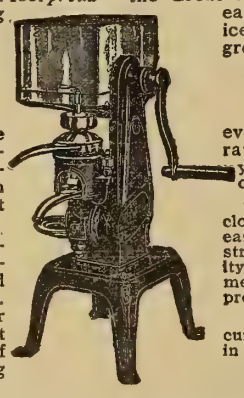
YOU WILL BE GLAD 730 Times a Year— That You Selected A GREAT WESTERN

Twice a day—730 times a year—for a *lifetime* — you'll be mighty glad you chose a *Great Western* Separator instead of any other.

Whenever neighbors are around while you skim—or when you happen to be at your neighbor's when he is skimming with some other make—you'll feel *proud* of *your* judgment in selecting a *Great Western.* You'll realize then, what Great Western



Quality

means to you. You'll realize what it means in close skimming, easy turning, easy cleaning and in bigger profits from *quality* cream and butter. Let us tell you the facts.

The Great Western *bowl* follows nature's laws by delivering the *cream* from the *top* and the *skim milk* from the bottom. There is no chance of their mixing—so you get the utmost in quantity and quality of cream—even when skimming COLD milk.

The bowl of the Great Western is self-draining and self-flushing. There are no long tubes, no minute slots, nooks, corners, crevices or ragged edges to hold milk and collect dirt.

The Great Western is ball-bearing throughout. The balls we use are absolutely uniform in size and test 50% to 100% harder than balls others use.

The ball races in the Great Western are tempered so hard that you cannot cut them with a file. That is why the Great Western beats them all for easy running and long service—why it is positively the greatest and undisputed

Value

ever offered in a cream separator. We will arrange to give you any kind of a trial you want on any size Great Western.

Test it yourself on every point, close skimming, ease of turning, ease of cleaning, sanitary construction, quality of cream, quality of butter and every feature that means durability—the most cow profits for the longest time.

Our 5 year guarantee and Security Bond prove our confidence in the Great Western.

Write Us Now

Let us send you our big book on more dairy profits. See how you can make from $10.00 to $15.00 more each year from every cow you milk. See the only separator that follows natural laws. The only separator cleaned in a jiffy. Skims warm or cold milk to a trace.

Write for our fine book today.

Rock Island Plow Co., 1816 Second Avenue Rock Island, Illinois.

DES MOINES SILO

Built for Permanence

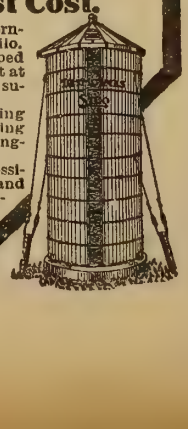
First Cost Is the Last Cost.

Creosote dipping adds, according to Government reports, 17 to 20 years of life to the Silo. That is the reason the Des Moines Silo is dipped in creosote. A special dipping plant was built at great cost to add this feature to the already superior construction of the Des Moines Silo.

The creosote penetrates into the wood covering every check and going deep—making the wood absolutely impervious to moisture, thus preventing rot and in a large measure overcoming the shrinkage and swelling due to changing atmospheric condition. It is never necessary to paint the Des Moines.

Des Moines Silos are equipped with spring lugs that overcome the last possibility of the hoops becoming loose. The Des Moines Triple Anchor System and three inside hoops are the best in the world. Positive insurance against damage by wind. Other buildings may go but the Des Moines Silo will stand.

The story of the Des Moines Silo is told in a book that will be sent free.



DES MOINES SILO & MFG. COMPANY
507 New York Avenue Des Moines, Iowa.

DAIRY

MAKING GOOD BUTTER.

Good butter cannot be made from foul milk. Therefore, the man who does the milking should take every precaution to keep the milk free from all impurities. The best butter is made from separator cream. Milk that must sit for a long time for the cream to rise is apt to become foul and taint the cream. Then there is the handling which must necessarily be done and often results in letting impure particles into the cream.

The cream should be kept sweet up to the time of ripening. Good butter is made from sour cream. Cream may be soured more quickly with a starter. This is nicely soured milk which has formed into a solid curd pleasant to the taste and mildly acid and easily broken up when poured from one vessel to another. Use one-tenth as much of the starter as you have cream and stir thoroughly into the cream and keep the cream to an even temperature and it will sour in twelve or fourteen hours.

All materials to be used in churning and making butter should be thoroughly cleansed. The churn should be scalded out thoroughly and rinsed with cold water. All ladles, prints, etc., should be rinsed in boiling water then in cold water. The surface of the wood will thereby become hardened and the butter will not adhere to it. The brick-shaped print is the best to use, as the butter from them is more easily packed and customers prefer it.

When the cream has soured it should be put into the churn—the barrel churn is preferable—and revolve slowly. If the handle is turned too fast the centrifugal force will keep the cream from falling and churning takes place. If the cream was the right temperature when put into the churn the butter will come in half an hour or less.

When the granules are the size of peas the churning should stop and the buttermilk should be drained off. Then sufficient water should be poured into the churn to wash the butter well. The water may be brought in contact with every particle of butter by a slow revolution of the churn. Drain the water off and add the salt. An ounce of salt to a pound of butter is the usual amount. One gallon of good cream will make two pounds of butter, so there will be no trouble to determine the amount of salt to put into churn. Revolve the churn a time or two after putting in the salt, then let it stand for a few moments or until the salt has melted.

Butter should be worked until all the water is out of it. The firmer the butter the more it can be worked. When it assumes a waxy condition and shows no sign of moisture it is ready to be molded. If the first working does not not remove all water, the butter should be placed in a cool cellar or ice chest until it becomes firmer then worked again. If all milk and water is removed, the butter will keep a long time without spoiling. After the butter has been molded it should be placed in a cool place, and when ready to take to market cover with parchment paper. An attractive pound of butter is half sold, but good, pure butter will always sell.

THE CITY MILK SUPPLY.

To the Editor of The Homestead:

The solution of the problem of an improved city milk supply includes education, legislation, co-operation and regulation.

The needs are to educate both producer and consumer, the one as to cleanliness, health of cows and milkers—water supply and environment—to offer a premium on clean milk and a penalty on dirty milk. Typhoid fever, diphtheria, scarlet fever, tuberculosis and infantile paralysis may be transmitted by milk. Pasteurization, properly done, does not diminish the healthfulness of milk and is the only method of insuring a safe supply for general use in cities. The consumer must be taught to pay for the good milk and to keep it cool and clean after it is received, not changing it from the original bottle to other vessels nor allowing it to stand open in the air.

Legislation to secure uniform dairy laws is absolutely necessary in order to meet the problem of interstate shipments and punish brokers and dealers who try to evade the law. The law should be simple, covering only essentials: (1) A bacterial standard of not over 100,000 to the c. c. (2) Tuberculin certificates above suspicion. (3) Nothing should be added to nor taken from the milk, but it must be sold as it comes from the cow. (4) All vessels in which milk is offered for sale must have the name of the producer stamped or tagged. (5) The enforcement of the law must be placed in the hands of energetic officials.

Co-operation by city and state is the only means of enforcing laws after they are enacted.

Finally, after all is said and done,

the law of supply and demand regulates the whole problem. There can be no improvement in the situation by legislation alone. No law enforces itself. Public opinion, and that educated until it appreciates the dangers of the present method and the benefits of the new era in our milk supply, will be the power to which both utilitarian and philantrophist must look for the ideal milk supply of the city.

Geo C. Mosher.

HANDLING CALVES FOR PROFIT.

To the Editor of The Homestead:

The first requisite for profitable calf raising is separate quarters for them, away from the older stock. If all are housed together, the smaller and more timid animals are sure to be crowded into the coldest corners—perhaps clear out in the bitter cold. The effect of this on their tender bodies needs only to be mentioned.

Another great mistake made by nine out of every ten farmers is that of feeding the calves practically the same rations as the grown stock. A moment's consideration would show any man that such a course is far from correct and profitable. It is but reasonable to think that the young, rapidly developing tissues of the calves will require a vastly different kind of feed from that given for only maintaining the mature tissues of the grown stock.

It is not advisable to allow the calves to run with the larger stock, even during the day, as they are bitten, kicked and chased around by the grown animals. It is still more detrimental to the little fellows for them to have to feed with the mixed herds, as they will get only a small part of what their share of the feed ought to be. With this inadequate supply of feed, exposure to the severe elements, and rations not adapted to their needs, it is not to be wondered at that so many farmers have such a scrawny, uneven bunch of calves when they come through the winter and are turned to grass the following spring.

The writer has a separate place for the calves, especially this last year's ones. Where there are but a few of them it pays well to have each calf assigned to a certain stall or place; then, with a light web halter on it, and a snap and tie rope attached to the manger, the little fellow soon learns its place, steps right into it, and is tied there. This insures no chasing around at feed time; no pushing and crowding; no cheating in feed of the smaller and weaker calves by the larger ones. This method also enables us to feed more economically and judiciously, gauging the quantity and variety of rations for each calf according to its size, age and individual tastes. By this management, we can give the heifer intended for the dairy herd a little extra care and feed, also teaching her to be led and handled, which will save a lot of useless training when she drops her first calf. The male calf, too, which will be retained in the herd for service, can be given the same care and handled in the same way, which will add several dollars to his worth by developing a strong, vigorous breeder that is gentle and tractable at all times.

Having provided clean, sanitary quarters, with good, dry bedding for the calves, we feed a variety of those rations that will promote the rapid development of both bone and muscular tissue rather than too much of those that would build up excessive fatty tissue. Our favorite grain-and-mill-feed ration for the calves consists of two parts bran; two parts oats; and one part corn chop. An occasional handful of oil meal for each calf will prove most beneficial. Shelled corn may be substituted in place of the corn chop for a change in rations, and one-half the amount of shorts will take the place of the bran. Such a ration keeps the digestive and assimilative organs in prime working order, regulates the bowels, and promotes ideal health and thrift among the calves, the corn portion of it supplying enough fat to maintain body heat and comfort. For calf feeding we avoid those roughages that are tough, woody or overripe, such as timothy hay, heavy, ripe millet hay, low-grade fodder and straw. Where the straw is bright and light of stem, small quantities of it will prove beneficial as a change in rations. Bright corn fodder is excellent if early cut. Clover or alfalfa is unexcelled, and if run through a feed cutter before feeding, dampened slight with water and covered with a light sprinkling of mill-feed stuff, the calves will greatly relish and thrive on it, requiring much less feed than where the product is fed in its raw, bulkier state.

A Perfect Separator Oiling System

In a machine which is operated at the speed required for a cream separator, perfect oiling is very necessary.

The new system of De Laval automatic oiling provides for a constant and liberal supply of *CLEAN* oil to every wearing surface of the machine at all times. There are no oil holes to fill up with dirt or perhaps to be neglected altogether, and every part is supplied with clean oil from the oil reservoir automatically and constantly.

In other, so-called, automatic oiling systems some of the parts have to be oiled by hand and no provision is made for getting rid of dirt that may get into the oil from the outside or of small particles of metal which come from wear, so that after a short time the oil supply becomes foul and injurious to the finely adjusted wearing parts.

DE LAVAL Cream Separators

have the only automatic oiling system which provides for a constant supply of fresh oil and, at the same time, the constant discharge of the used oil together with all worn metal particles or dirt which may have gotten into the used oil.

The perfect system of De Laval lubrication means an easier running and a much longer wearing machine. Visit the local De Laval Agent and ask him to explain the advantages of De Laval automatic oiling.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

THE DE LAVAL SEPARATOR CO.

NEW YORK CHICAGO SAN FRANCISCO SEATTLE

Dairy Cleaning Easily Done

Old Dutch Cleanser halves the work in the dairy. The milk pans, pails, churns and cream separator are thoroughly cleaned in half the time with half the effort, if Old Dutch Cleanser is sprinkled on cloth or on the article cleaned. It leaves the milk utensils shinning, clean and sweet.

It quickly removes cream clots and milk stains from shelves, benches and floors.

Old Dutch Cleanser does equally as well anywhere on the farm where cleaning is done.

Old Dutch Cleanser

Many Uses and Full Directions on Large Sifter Can—10c.

One of the most satisfactory roughage rations we ever have found, consists of mown oats, cured and stacked while passing from the milk to the dough stage; and second-crop millet, grown on the same land the oats were and cut before it was thoroughly ripened. Cut at this stage of growth, both these roughages will retain their natural, juicy flavor and succulence, the tender, nourishing blades will hang to the stems; while the grain, not being thoroughly ripe, will prove fine for the calves, making it necessary to feed only a very little, if any, grain in conjunction with this combination roughage.

Cole county, Mo. M. Coverdell.

TURNING THE COW DRY.

To the Editor of The Homestead:

With some cows turning them dry is not a difficult nor damaging process; with others it is a serious problem; with all it should be carefully and systematically managed. In turning a cow dry we try to follow nature as closely as possible, drying up the cow that is yielding a low supply of milk much quicker than the one which more easily keeps up a good milk flow.

Some argue that the cow should be held to her milk till the calving period, if possible, but as a general rule this is not advisable. The cow needs a little rest surely in a whole year. Then the calf is apt to be stronger and more vigorous if the cow's whole energy is devoted to its sustenance at this period.

When we begin to dry up a cow she is skipped at one milking time. If her udder is limp and flabby at the next milking period, showing the presence of little or no milk, she is not milked till the next time. As a rule, however, the cow will require milking, and the cow that has been a heavy milk producer will demand it without fail.

We skip one milking for about three days, when the cow is allowed to go without milking for two periods three or four days, the distance between the milkings being gradually increased till she is milked only twice or three times in a whole week, when, if no complications have been noticed, the milking may be left off entirely, noticing occasionally that all is well.

There are two common mistakes made in handling the cow that will be fresh in the spring. Some try to dry her up too rapidly by light feeding, milking only part of the milk from her udder, giving those rations intended to dry up the milk flow, etc. These practices are damaging to both the cow and her unborn calf. Milk the cow clean and dry when you do milk, as the partial milking may spoil her by training her to hold a part of her milk up after she drops her calf.

Feeding the pregnant cow on dry, woody or other feeds that are low in milk-producing qualities is productive of serious digestive ailments and stunts the calf she carries, and the same is true of the light feeding. Some cows are such persistent milkers that it will be necessary to milk them right up to the time of calving, and in such cases don't slight her to cut down the milk flow. It is imperative that she be kept in prime condition if she develops a calf of healthy, vigorous constitution, and any unnatural treatment in the way of feed will wield a detrimental influence against this. The other mistake, above mentioned, is just the opposite of this one, that of overfeeding to keep up the milk flow of the cow which, by nature, ought to be turned dry. Such a practice probably brings more harmful results than underfeeding, as it not only deranges the animal's entire digestive and assimilative system, but lowers the constitutional vigor of the unborn calf, often resulting in abortion; while the milk flow of the cow when first fresh is sure to be below normal Subscriber.

HANDLING AND FEEDING A BROOD COW.

To the Editor of The Homestead:

Not only does the condition of the brood cow demand that she be handled and fed with great care from now on till calving time, but the health and vigor of her offspring wil' depend largely upon the manner of her keeping till that period.

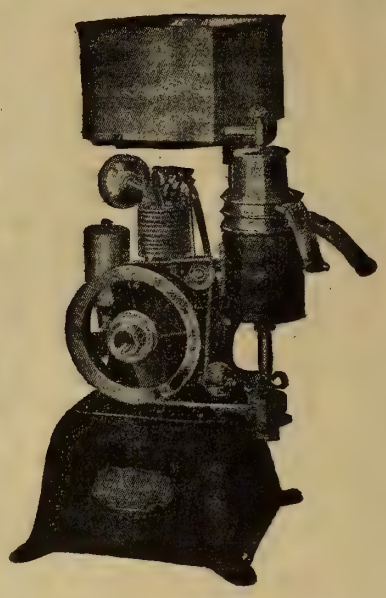
Quietness is imperative. Any sudden fright or chasing of the pregnant cow is sure to result seriously, damaging both the cow and her unborn calf. She should be handled with the greatest of care, which not only avoids the influences of the circumstances just mentioned, but one thus will be on friendlly terms with her, and can be of more benefit to her at the time of calving.

If possible the pregnant cow should be kept away from the other stock, especially for several weeks immediately preceding the time for calving. Their condition and feelings in general cause them to be slow of movement and get in the way of other animals, which often results in a kick or a jam that causes abortion, or at least a partial paralysis of the cow, the damage also being felt by tne unborn calf.

Snug, dry quarters at night should be provided for the pregnant cow. Housed thus, she will require less feed

"The 1913 Automatic" Cream Separator

Compels Attention



The "Automatic" is the one great stride forward in dairy appliances since Babcock's invention. It overshadows all others. The idea of combining in one efficient unit the separator principle and gasoline power, to skim more evenly, more closely, more quickly, with *no* effort —was a big one. It startled the whole dairy industry.

In all parts of the world dairymen installed the Automatic to test it. Agricultural colleges and Experiment Stations tried it thoroughly. Everybody saw its possibilities, if successful. And it has been wonderfully successful. For over two years Automatics have been in steady operation in all parts of this country, in Europe, Australia, South America—wherever cows are being milked and butter made.

In point of operation the engine has worked without a hitch. It has been trouble proof. In point of close skimming, the Automatic has broken all records. No hand crank machine can possibly skim so close, because the speed of hand power varies. The Automatic skims even, absolutely even, the speed being maintained without variation. The result is more butter fat and smoother cream; to say nothing about a great saving of time and labor.

Self Powered: Engine and Separator In One

Wherever ten or more cows are being milked hand power is doomed. No up-to-date dairyman will put up with the drudgery and expense of cranking a separator when he can have it done quicker and better with gasoline power *compactly built into the machine itself.* He won't burden his family with a backbreaking grind, if he can help it; and he won't hire extra help—not at present wages. You don't have to tell him about the advantages of gasoline power. He knows them. The problem was to build into the separator itself an *efficient* gasoline engine. This has been done. The AUTOMATIC is a perfect combination of the two. It is a smooth running unit, with a self contained motor specially designed and adapted for separator use. The design is patented: nothing like it on the market. The bowl spins *without a trace of vibration.* This is a very different matter from the makeshift of hitching up a hand cranked separator with any ordinary gasoline engine.

When the Milking Is Done, Skimming Is Done

The Automatic will handle over 700 lbs. of milk in an hour, for any number of hours. It skims faster than ten men can milk, at a high even speed. No hitches or variations. The engine requires not the slightest attention; runs continuously for six hours without replenishing of fuel. Starts by the pulling of a cord. No chance to kick. The separator is simplicity itself. Crankless and gearless. No complicated parts to get out of order. Little to wear out. With ordinary care it should last a lifetime.

1913 Model Equipped With Magneto

This is our latest improvement. Makes ignition more certain. The battery and coil system has worked very well—given universal satisfaction. But it is not as scientific as a suitable magneto. The problem has been to design a suitable magneto for THE "AUTOMATIC." This has been done. The magneto perpetuates itself—never needs recharging. With this latest improvement the Automatic has been rendered more completely automatic. Not even a battery to renew, nor a coil to adjust. We are also manufacturing battery equipped machines and selling them with a special trade allowance of fifteen dollars for old separators taken in exchange.

If you are milking eight to ten cows or more you ought to know about the AUTOMATIC Cream Separator. See it in actual operation. Then you won't go on cranking a hand machine any longer. You cannot afford to.

By writing us you can obtain full information by mail. We will tell you where you can see the machine in operation—of what dealer you can buy one. Give us the name of your dealer.

WILCOX & STUBBS CO., Des Moines, Ia.

to keep her in prime condition, which prevents the overtaxing of her digestive organs in handling large quantities of feed to keep up flesh and bodily heat. This provision is also most essential because of the fact that the cow might drop her calf at a time when one least expected it, and by having her confined every night, there will be no danger of the calf being chilled or frozen.

Moderate exercise is a pressing essential with the pregnant cow, and is apt to be neglected in furnishing her with snug, separate quarters. In all cases, she should be allowed the range of a good-sized lot, where she can move about in the open air and sunlight the exercise tends to keep her digestive and assimilative organs in correct working order. Where exercise is scant or neglected, serious complications are apt to set in, especially those with the seat of trouble located among the bowels.

For a pregnant cow of good health and vigor, one might not need to exercise quite so much care in feeding; still it is best to keep on the safe side and feed her after the most approved methods. While too much corn is productive of bad results we never have experienced any trouble from feeding a limited amount of it to pregnant cows—enough to keep up the heat of the body and to maintain good flesh. For the grain ration we favor equal parts shorts, oats and corn-chop (or corn-and-cob chop may be substituted for the corn-chop). Roughage may be of clover or alfalfa, clean, bright corn fodder or mown oats, the latter having proved especially fine with us. These rations simply keep the bowels loose and in prime working order, avoid congestion of the already somewhat heated system of the animal and furnish the proper nourishment for the unborn calf, at the same time leaving the cow's milk-producing organs so stimulated as to start a heavy and profitable flow of milk as soon as the calving period is safely passed. These ideal conditions being promoted there is not one case in a hundred where there will be any trouble whatever experienced when the cow adds another link to the profits of your dairy herd.

M. Coverdell.

DEEP PLOWING.

To the Editor of The Homestead:

Seeing in a recent issue of your paper an article under the caption, "Deep Plowing," with your permission I will give your readers my experience the past season. I have a field of twelve acres of average upland, the soil being a reasonably light loam with a good red clay subsoil—one of the characteristics of our best uplands. This field had been in corn and cowpeas the previous year, but the growth of the vines was not very heavy, as the season was unfavorable one for peas. No stalks or litter of any kind were removed or burned, but all cut up and plowed under.

It was my purpose to plow this field at least two or three inches deeper than it had ever been plowed before, which was about five or six inches at most. I put two horses to a No. 12 Vulcan plow and set the plow to run about eight or nine inches deep, but did not let plow cut full width, my purpose being not to cut wider than eight inches at most and from that only six or seven inches wide. By this method of plowing you turn but little, if any, of the raw subsoil to the surface. Of course, it takes longer to plow a field this way, but I feel that I have been amply repaid. I did not commence to break this field until about the 10th of April which is very late for this climate.

This field was planted in corn the latter part of April and some of it not until May. The early part of the growing season was one of the wettest I ever saw and but little cultivating with a team could be done. The latter part of July and all of August were dry. This field did not have a bit of good corn season after the ears commenced to form, but notwithstanding the hot, dry weather the yield was fairly good, a part of the field making fifty bushels per acre.

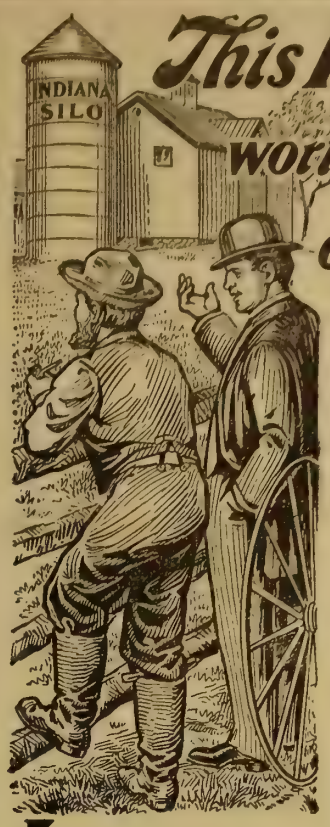
In conclusion I will say that I do not think any of your Missouri or Kansas correspondents will make any mistake in plowing as deep as they want by cutting narrow furrows. I think this method is better than subsoiling.

W. M. Key

Madison county, Tenn.

The United States uses one-fifth of all the sugar made in the world.

This INDIANA SILO is worth more than the farm on which it stands



The West Virginia Farmer to whom we sold this Indiana Silo is now feeding 47 head of cattle where he formerly fed only 17 head. No more land under cultivation, no more crops planted, no more feed bought,—but the corn goes three times as far because cobs, leaves and stalks all go into his animals instead of into waste. Twenty-five thousand other farmers have found that the

INDIANA SILO

is the biggest money maker on the farm because it enables them to get 100% food value out of their corn crops and to have fresh, succulent feed all year round at less cost than dry feed.

The Indiana Silo is a quality article from the ground up. Only the best of silo materials enter into its manufacture. Our timber experts at the mills take the first selection. The highest grade steel is used exclusively for making our hoops, every one of which is capable of withstanding four times the strain that ever comes upon it. These are some of the reasons why Indiana Silos last so long without deterioration and cost so little for upkeep.

Every man who buys his first silo from us buys his second, third and fourth from us also. In fact, he is pretty sure to buy his second silo from us, no matter where he bought his first.

If you want to make your corn crop yield you twice the net profit it now returns, order an Indiana Silo today. We will make delivery when you want it.

WRITE today for our catalogue and a free copy of the book "Silo Profits", which is the story of the Indiana Silo as written by scores of owners of Indiana Silos. And ask us for the name of our representative in your locality.

Remember you don't need cash to buy an Indiana Silo—"It buys itself."

HOLSTEIN-FRIESIAN CATTLE.

Pure-Bred Registered Holstein Cattle.

Bulletin 225 of the College of Agriculture, University of Wisconsin, says: "The average Wisconsin cow produces 200 lbs. of butter per year, worth but little more than the feed she eats."

In a state famous for its high-producing cows, this seems a poor average and shows that a great number of the cows kept are only a source of expense to their owners.

Does all your cows pay a reasonable return on the investment of money and labor they represent? Any good Holstein pays 50% profit on the cost of her feed.

Send for Free Illustrated Descriptive Booklets.

HOLSTEIN-FRIESIAN ASSN., F. L. HOUGHTON, Sec'y. Box 113, Brattleboro, Vt.

Holstein Cows and Heifers at Bargain Prices

ON account of shortage of ensilage crop in N. Y. state I am shipping west 300 head of high-grade Holstein heifers and cows, 2 to 5 years of age. These are arriving in lots of 50 every week and I will make attractive price to men that can handle a car load. All tuberculin tested and bred to registered bulls. Also a few registered bulls ready for service. **ROCK BROOK FARM, STA. B, OMAHA, NEB.**

HOLSTEIN BULL AND COWS FOR SALE.

Here's the Only Guaranteed Incubator in the World

Sam Thompson, President

Investigate it thoroughly before you buy. Compare it with any on the market. Read the stories of success and profits made by Fairfield owners. Try it yourself on my 2-hatch trial proposition and you will be convinced that my Fairfield is in a class by itself, the most perfect incubator made. Perfect in material, construction and perfect in hatching.

These are not claims, they are facts and I back them with my guarantee, the fairest, squarest ever written.

First, I guarantee that the Fairfield is made right, that it works right, particularly, that it will hatch right, which means hatch 90% or better of all fertile, hatchable eggs or you get your money back. Now the question is, do you want a guaranteed Fairfield and some profits, or will you invest your money and experiment with any old kind and waste your time, spoil high-priced eggs and be satisfied with 50 or 60% hatches that you get with ordinary incubators. Think it over. At least investigate.

7 Years' Hatching Record Proves the Fairfield the World's Best Hatcher

Seven years ago the first Fairfields were built. They made good right from the start. They made hatching and poultry raising a certainty instead of guesswork. They established a record for big, continuous hatches that no other incubator has ever been able to touch. That's why the Fairfield today is known and recognized as the World's Best Hatcher.

Six years ago a Fairfield was shipped to Mrs. Wm. Evans, at Albion, Neb. During all this time she averaged 92% hatches and had absolutely no expense for repairs except 30 cents for new lamp burner.

Coxbill Bros., Deweese, Neb., bought four Fairfields last season and hatched over 2,000 chicks. In their recent letter they report that their old Fairfield bought 5 years ago still runs fine and hatches same as their new ones.

Thousands of similar reports are on file. We will send you some from your own community if you still have any doubt about it being the World's Best Hatcher. The quickest and surest way to convince yourself is to get my 2-hatch trial offer and try the Fairfield on my guarantee of your

Money Back If the Fairfield Does Not Hatch 90% or Better

The whole secret of the Fairfield hatching power lies in the construction of the machine. It's made of finest California Redwood with double wooden walls having dead air space between. The lid is made with special insulating material to retain heat. The heating system is of heavy copper throughout and so arranged that every part of egg chamber is of even temperature. In addition it has automatic heat regulator to insure steady, uniform heat, without requiring constant attention from operator. Each detail of Fairfield construction is correctly and honestly worked out. It cannot help but give satisfaction to everyone, either new beginners or expert poultry raisers, in any climate and maintain its reputation as the World's Best Hatcher.

You Can Own a Fairfield Free After First Hatch

The Fairfield costs no more than most of the ordinary incubators but the first hatch made with a Fairfield pays for it and leaves a profit besides. That makes the Fairfield a mighty good investment.

The Fairfield Makes the Chicken Business Pay.

It removes the guesswork and uncertainty and you get reliable results because you are working with a reliable machine. When you put 100 fertile eggs into a Fairfield you absolutely know you will get at least 90 chicks because that is my unconditional guarantee. I couldn't give you a guarantee like this unless my machine was as perfect as it is possible for human skill to make it.

FAIRFIELD Incubator WINS

The Great Missouri and Kansas Hatching Contest

The Farmers Mail and Breeze, to show the possibilities in chicken raising for profits, conducted an incubator contest among its readers. 1,500 people from Missouri and Kansas entered. Every known make of incubator was represented and Mrs. R. L. Decker, of Columbus, Mo., won first prize with a Fairfield which made a 99¼ and 100% hatch. That's simply another illustration of the fact that the Fairfield is really and truly the World's Best Hatcher.

Write for Free Catalog and Special Offer

Get the Facts About the Fairfield.

I've told my story giving as many facts as the space would permit. Now it's up to you to investigate thoroughly. The quickest way would be for you to write for my free catalog for my special 2-hatch trial offer and full details of my guarantee.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

ROUP—CATARRHAL.

"A Subscriber," Dakota City, Neb., writes:

Please tell me what ails my chickens and what to do for them. We have a good poultry house lined with Ruberoid roofing. The chickens are turned out every nice day. They are fed warmed wheat scattered in straw and a little browned corn in the evening. The eyelids begin to swell, pretty soon become swelled shut, followed by much inflammation, and the watery substance runs down their beaks. At this stage many of them die.

There is roup and roup, practically the same though in different forms. A common cold and roup are easily confused. Cold is not roup, neither does it "run into" roup—really. A cold may run through a flock because the conditions that cause one fowl to take it causes all to be afflicted. Then in the weakened condition the flock is susceptible to roup, which is caused by a specific germ. The outward symptoms woud indicate that the "cold is worse." When the eyes swell and there is a catarrhal discharge the trouble is accompanied by an offensive odor. When it reaches this stage it is contagious, and immediate action should be taken.

Kill all fowls badly infected, and be sure they are completely destroyed. Remove all afflicted birds to warm, dry quarters, in the sunshine if possible, and feed a soft, easily assimilated ration. Sometimes the swelling becomes soft in the center when it should be lanced with a sterilized knife and the pus drained out. Wash with a disinfectant. Fifty per cent peroxide of hydrogen is the best thing I have found for either afflicted chickens or boys with nail punctured feet, and anoint the wound with carbolated salve. A large box can be purchased for fifty cents and should be on every farm. If not allowed to run too long the disease may be checked and the fowl recover. Whether it is a course to be recommended for future breeders is extremely doubtful. Certainly not if the fowl had become seriously affected.

Your hope is in the remainder of the flock. The house is warm enough, but is it ventilated? From the description I judge there is no draft, but if there is no provision for fresh air, that would of itself cause the trouble. A house should be tight as a drum on three sides, and the fourth is of small matter so long as the rain or snow does not enter. It is the warm, damp, ill-ventilated house, that causes roup, and other outbreaks of disease as well.

As compared to other animals the hen has a much higher temperature. This means a rapid combustion within the body and much fresh air is necessary. It has been estimated that a horse weighing 1,000 pounds breathes nearly 3,500 cubic feet of air in twenty-four hours. Two hundred five-pound hens, while weighing no more than the horse, yet require 8,000 cubic feet of air in the same length of time. Nature has given the hen, in addition to a good pair of lungs, a system of air sacks which extend to all parts of the body and are connected with the cavities of the bones. Unless there is good ventilation to carry off the moisture of respiration the house is damp.

Give the flock enough permanganate of potash in the drinking water to color it a rich wine color. On the first symptom of trouble, put some of this solution in a can and dip the fowl's head so that the liquid will be forced to all parts affected. Fifty per cent solution of peroxide is good and in the case of being temporarily without either, I have used kerosene with good results. The idea is to begin as soon as the trouble is detected. Anyone should be so well acquainted with his flock as to note the lack luster eye and general unthrifty appearance of his fowls before any decided symptoms are manifest.

The feed mentioned is a very good basis, to which should be added plenty of succulent food, grit, crushed shells and lean meat in some form. Milk is a cheap by-product on the farm and is good for a chick from three days old, all along the line of growth and egg production, and it is an important factor in preparing for market as well.

FAVUS IN POULTRY.

A farmer's wife says:

Can you tell me what ails our poultry? The trouble is in the neck. They do not act like limberneck. Just the back of the neck is affected. It swells, gets sore and hard to the touch. I began to doctor them, rubbing salve on the affected parts as soon as we noticed the trouble. Only a few died, but the trouble seems to be going through the flock. They eat and drink almost the same as usual.

Favus is not very common in our

Big Money this Year in Poultry and Eggs

1913 promises to break all records in poultry and egg profits. Prices are high now—and will stay high. Cost of production is low. Farmers, their wives and daughters, will make a big share of this 1913 poultry money. But the way to do it is to be rightly equipped—with the right knowledge—with the right tools!

"Profitable Poultry and Egg Production" is the title of our big, FREE 1913 Year Book that gives the latest facts, the most successful methods, the most reliable advice on poultry raising. It is worth many dollars to any one who raises chickens.

Cyphers INCUBATORS and BROODERS

are selected by farmers, who insist upon a high standard of quality in every tool used on their farm! *Absolutely reliable.* They mean high percentage hatches and chicks that live—no heat or moisture troubles. Substantial, fireproof, dependable. It will be an ornament to any home. Given with a year subscription to People's Popular Monthly for only 30 cents. Our supply is limited. Order now. Dept. D.

People's Popular Monthly
Des Moines, Iowa

country. It is caused by a fungus usually found in mold. This same mold is responsible for a lot of trouble that no one knows of. If examined when first affected there will be found a thin crust formed on the surface of the skin. Our correspondent's success in saving her flock is due to prompt measures, and before the thin crust began to thicken. The disease develops rapidly and as it advances the crust often forms into round deposits raised at the outer edge and depressed in the center.

If taken in the early stages before the crust becomes thickened, any kind of oil will be found effective. If allowed to run until the scales do become thickened, it is necessary to scrape off the crust so that the oil may reach the basis of the trouble. Succeeding in this the fowl may be saved. In extremely bad cases it is well to add one part carbolic acid to twenty parts ointment.

Every precaution should be used in treating fowls for favus. It is possible for human beings to contract the disease and especially if there be a cut or wound of any sort on the hand when coming in contact with the fowls.

STRAIN, SCALY LEG AND SPURS.

Mrs. C. W., of Illinois, writes:

I have purchased a Barred Rock cock and am in dobut if he is a Thompson or Bradley strain. What is the difference? What will cure scaly leg? The cock mentioned has very small spurs. Do you think they have been removed, and what would be the object of doing so?

The first question is a pretty hard nut to crack and might get one into more than his allotted peck of trouble. Poultrymen, who are acquainted with the different strains of the Barred Rocks, can at sight distinguish the particular strain. We have heard judges who would begin to score a show bird say, "Bradley Brothers," or "Thompson strain." Every strain conforms to the same standard, the principal difference being the result of different men's ideas about minor things.

When we think of Thompson strain, the thing that stands out most prominently is the even barring, that reaches in an unbroken line around the body, hence the name "Ringlets." The sure sign of Bradley strain is the narrow, clear-cut barring on the wing. At a large poultry show last winter I was struck with the appearance of a very choice cockerel. The owner was asked what strain he raised, to which he very pompously replied: "Oh, we have a perfected strain of our own!"

"That wing spells Bradley Brothers to me."

"There is a little Bradley stock in his makeup."

Guess there was! It afterwards turned out that the bird was bought, and not a "perfected strain" of the exhibitor at all.

Which strain is better? Either strain is bigger and better just as its keeper is bigger and better.

The best cure for scaly leg is to rub the affected part with oil, lard and kerosene or anything similar that can be rubbed well under the scales. This treatment puts the minute parasites, that burrow under the scales, out of

THE HOME OF DICKEY'S DUROC J ERSEYS.

The above engraving shows a herd of Duroc Jersey hogs owned by F. H. Dickey, Emmetsburg, Iowa, together with the modern buildings with which his farm is equipped. Mr. Dickey holds a public sale of Duroc Jersey sows in the pavilion shown in the picture Tuesday, February 4th. See page 49.

Address,

PEOPLE'S POPULAR MONTHLY,
211 Grand & 3rd
Des Moines, Ia.

commission. The white lime-like substance is the excrement of the insect. If taken in time the trouble is very easily combated, although the shanks will never be just as good as before. Some fowls are more susceptible to attack than others. If, when one of a flock is found to be infected, the other birds' shanks are lightly greased it will prevent contagion.

Without seeing the cock it would be impossible to say how he lost his spurs. If they are removed entirely and smoothly, it is very probable that they have been sawed off. For what purpose, I would not undertake to say. Sometimes when fighting cocks get the hard, horny substance torn entirely from the shank, leaving only a small, pithy substance that mostly dries up, leaving little or no semblance of a spur. Then, too, amongst better breeds of the larger class of fowls I often find that the immense weapons of defense are not so much in evidence as in the days of the mongrel. The domestic fowl is being farther and farther removed from the jungle fowl, that needed weapons for defense and it is natural that with less need of them the size would diminish.

POINTERS.

—Mrs. J. J. Griffith, Lorimor, Iowa, will sell Rose Comb Brown Leghorn pullets and young hens by the dozen at the price named in her advertisement on page 27.

—Wm. Kerr, Box B, Winthrop, Iowa, breeder of Thompson Imperial Ringlets and Bradley and Latham strains of Barred Plymouth Rocks, offers forty surplus cockerels of the Thompson and Bradley strains at $2 to $3 each. —K. Brunia, Pella, Iowa, is quoting prices on Buff Leghorn cockerels, both Rose and Single Comb, and eggs in season in his advertisement appearing on page 27.

—The Red Poultry Farm, Randalia, Iowa, will guarantee the quality of the Rose Comb Rhode Island Red cockerels that they are offering for sale in their advertisement on page 27.

—Readers of The Homestead desiring to purchase White Orpington eggs should read the advertisement of Ed Leclere, Central City, Iowa, that appears on this page of The Homestead.

—M. D. Korns, Hartwick, Iowa, has twenty-five Single Comb White Orpington cockerels of the Kellerstrass strain which he is offering for sale in his advertisement appearing on this page.

—We wish to direct the attention of our readers to the advertisement of W. I. Mouser, Red Oak, Iowa, offering Rhode Island Reds, both Single and Rose Comb, for sale, that appears on page 27.

—Large and well-barred, full-blooded Plymouth Rock cockerels are offered for sale at a very moderate price in the advertisement of Mrs. M. J. McKenna, Rock Rapids, Iowa, that appears on this page of The Homestead.

—C. H. Drake, Hazleton, Iowa, makes the announcement in his advertisement on page 27 that he must sell his choice flock of Single Comb White Leghorn hens and pullets. On account of removal March 1st Mr. Drake proposes to make special prices for quick sale.

—"I have a choice lot of Rose Comb Brown Leghorn cockerels this year," writes Mrs. G. W. Stetzel, Audubon, Iowa, in furnishing copy for advertisement on page 27. "They are early hatched, farm raised and of a fine laying strain. I have no pullets for sale."

—Mrs. Sophia Rader, Laurel, Iowa, has an advertisement on page 27 offering Single Comb Rhode Island Red cockerels for sale. She writes: "I have a nice lot of cockerels, better than ever, good in size and color and of a good laying strain. Those in need should order now."

—Mrs. James McNally, Victor, Iowa, whose advertisement appears on page 27 of The Homestead, writes: "I have some large, well-marked Barred Plymouth Rocks and Single Comb Red cockerels on hand that I will sell at a bargain to close out at $1.50 to $2. Some of these weigh nine pounds. Orders booked for eggs and baby chicks."

—"I am selling Single Comb White Leghorns of the very best laying strains, healthy, vigorous and pure white, at $10 per dozen," writes Mrs. George Roe, Bellevue, Iowa, whose advertisement appears on page 27. "I also have some pure White Holland turkey toms, big boned, the young ones weighing over twenty-five pounds that I will sell at $5 each."

—"The Silver Laced Wyandottes we are offering for sale," write Glen and Mae McLaughlin, Manning, Iowa, in sending in copy for their advertisement on this page, "are good size, clear color, and have farm range. We breed Silver Laced Wyandottes exclusively and have been doing so for the past twenty years."

—Mrs. E. C. Turner, Griswold, Iowa, in furnishing copy for her advertisement found on this page, writes: "I have a few of my fine White Plymouth Rock cockerels to spare yet. They were scored by Poultry Judge Mills in December, and we have only a very few left at this time. We can furnish score card with each."

—Mrs. Howard R. Moore, Dexter, Ia., in sending copy for her advertisement found on page 27, writes: "These Single Comb Rhode Island Red cockerels are from high-scoring stock, scored by reliable judges of the breed. They are large, healthy birds of good shape and dark, even color, suitable for pure-bred pens, and are of a good laying strain. Satisfaction guaranteed."

—O. C. Bierma advertises Mammoth Bronze turkeys and Rhode Island cockerels on page 27. Mr. Bierma was highly successful at the Des Moines Poultry Show, capturing first prize on tom, first on hen and grand sweepstakes cup for best turkey in the show. Last year he won first and second on pair at the same show. Our readers who want high-class birds should note the fact that special prices on these fowls may be obtained prior to February 15th. Address O. C. Bierma, Altoona, Iowa.

—J. Ross Bachman, Blakesburg, Ia., in furnishing copy for his advertisement on page 27, writes: "We are breeding ten different varieties, of which we make Buff Rocks a specialty. All our birds are raised on free range, so we have nothing but health and vigor in each flock. Our birds are raised on different farms, so we have no trouble with mixed breeds. Our Buff Rock pens will include all our Iowa State Fair, Albia and Ottumwa, Iowa, winners and are surely a fine

BABY CHICKS.

BABY CHICKS. Baby chicks and eggs for hatching from 10 varieties of vigorous, farm-ranged birds. Our mammoth coal-heated incubator is the largest in Nebraska. Maplewood Poultry Farm, Exeter, Neb.

COCHINS.

BUFF COCHINS exclusively, large-framed, big-boned, even-colored, heavily feathered ckls, and pullets for sale. W. W. Vaughn, Marion, Iowa.

bunch of birds. We will have nothing but the best birds in all our pens this season and will give our customers value received."

—S. B. Moyle, Hillsboro, Iowa, is quoting prices on Bourbon Red turkey toms and hens in his advertisement appearing on page 26.

—Barred Plymouth Rock cockerels of the E. B. Thompson Ringlet strain will be sold at right prices, according to quality, by Otto Pfeiffer, Gordon, Neb., as per advertisement on page 26.

—Frank Hickman, Leon, Iowa, has some fine young Mammoth Bronze turkey toms and pullets of good size and markings, that he is offering for sale in his advertisement on page 26.

—At the Franklin and Butler county poultry shows, R. S. Tennyson, Clarksville, Iowa, won the blue ribbon on white Wyandottes. He is offering cockerels of this variety for sale in his advertisement appearing on page 26.

—Scored and unscored cockerels, pure Keeler White Wyandottes, are for sale at reasonable prices by Mrs. C. A. Robinson, Griswold, Iowa. Her advertisement appears on page 26. She also quotes prices on White Wyandotte hens.

—Ethel H. Shaw, Monroe, Iowa, is offering White Guineas for sale in her advertisement on page 26. This variety of guineas do not stray and are easily raised. The price at which they can be secured is named in the advertisement.

—Ben R. Poortinga, Monroe, Iowa, is offering Rose Comb White Leghorns for sale in his advertisement on this page. He writes that he has the nicest flock of birds he has ever had and has won a number of prizes at the leading fairs.

—The Ivory White Poultry Farm, Greene, Iowa, have some very nice birds to offer the public at very reasonable prices. Satisfaction guaranteed in all cases. Look up their advertisement on this page and write your wants, mentioning The Homestead.

—W. F. Holcomb, manager of the Nebraska Poultry Company, Clay Center, Neb., has an advertisement on this page quoting prices on White Orpington, Indian Runner duck, turkey and geese eggs. This company breeds all the leading varieties of standard poultry, Plymouth Rocks being their leaders. They will sell stock of the highest quality at "let-live" prices. Write them for descriptive circulars.

—There is offered for sale in the advertisement of J. P. Hunt, Mount Pleasant, Iowa, appearing on this page of The Homestead, five Holland turkey toms and two African ganders. Mr. Hunt writes: "It is getting late for mating geese. Anyone sending soon will get a very fine bird for $6. These geese are heavy feathered, tall and swan-like in appearance and make a beauty spot in any poultry yard or pasture."

—O. A. Knerr, Beaver Crossing, Neb., is offering some very choice Rose Comb Rhode Island Red cockerels and they are priced very low for the class of stock. Also a choice lot of stuff in the Single Comb pullet line is offered. Mr. Knerr is one of the great Rhode Island Red breeders of the country and is deserving of a good class of trade. Send in your orders at once and when you write mention this paper. See this page.

—Buff Orpington eggs direct from the Cook strain are advertised for sale by W. L. Bardsley, Neola, Iowa, on page 26. Mr. Bardsley has four pens mated for this season from which he can furnish eggs ranging in price from $10 to $1.50 per sitting. He also has a utility flock from which he will sell eggs at $1 per sitting or $7 per 100. To those interested and wishing other information Mr. Bardsley will send a circular free.

—W. A. Hasebrook, Bladen, Neb., a breeder of Single Comb Rhode Island Reds, is offering some choice breeding stock of exhibition quality for sale. He is naming prices on this class of fowls that are hard to duplicate and we believe it would be a good plan to write for these prices at once. Eggs for hatching are also for sale. Please write for prices at once and when doing so mention this paper. See this page for advertisement.

—R. S. Ketcham, Boonville, Ind., in furnishing copy for his advertisement found on this page, writes: 'I have as fine a flock of Single Comb White Leghorns as can be found in the state. Some of the birds I produce will win in any show. Besides producing high-class exhibition specimens I have developed a strain that cannot be beaten as fall and winter layers. Will prepay the express on shipments of eggs and guarantee every egg to be fertile." Those needing foundation stock to start with or wanting to introduce new blood could not do better than give Mr. Ketcham an order.

—White Leghorns that are chalk white are offered for sale by J. M. Williamson, proprietor of Leghorn Hill Poultry Farm, on the Urbandale car line, Des Moines, Iowa, in his advertisement appearing on this page. Mr. Williamson is one of the oldest and best breeders in the state, having been a breeder for thirty-two years and an associate of B. N. Pierce, one of the makers of the Standard. He knows how to breed prize winners, as his record at the state fair last fall proved when he won first on cock, first on hen, first and second on cockerel, first and second on pullet and first and second on pen. He still has a few very choice cockerels to sell and will have the best matings for eggs this year he has ever had. Write him for prices and circular. A representative of The Homestead has seen his stock and knows it is fine.

RHODE ISLAND REDS.

R. C. RHODE ISLAND REDS
EXCLUSIVELY.
STOCK AND EGGS SHIPPED ON APPROVAL
Score Card by Shellabarger Accompanies Each Bird.
YOU are privileged to pass upon the merits of the stock before accepting it. Eggs not fertile will be replaced. As to my reliability, you are invited to inquire of any bank or business firm in the city. **HENRY G. WALKER, IOWA CITY, IA.**

R. C. RHODE ISLAND REDS
I STILL have a number of those large-boned, vigorous, farm-raised cockerels for sale, bred from a heavy laying, prize-winning strain. Scored and unscored. PEKIN DUCKS W. Wyan., choice, large stock, desirable breeders, sure to please. Write for what you wish. E. S. Dyas, Bellevue, Iowa.

Breeding Horses on the Farm for the Market.

By Prof. E. A. Trobridge, Missouri Agricultural College.

THE production of horses in the United States has come to be one of the important branches of agricultural production. Because of the annual value of the horses produced and the profit which may accrue therefrom it is of the utmost importance that the best methods of both breeding and development be used. The production of horses works upon such a system that the profit or loss does not appear as directly traceable to the industry as it does in the case of meat-producing animals. This is because of the fact that the horse not only yields a profit as a salable product, but performs the labor upon the average farm. A careful study of the situation as it exists today reveals the fact that while considerable improvement has been made in the horse produced in this country there still exists an opportunity for greater improvement and thereby a greater profit.

Unquestionably one of the greatest difficulties which stands in the way of the greater profit from this line of agricultural production is a lack of acquaintance on the part of the producer with the market standards. Unfortunately the fault in this case cannot be laid at the door of the buyer. His demands exist for certain classes of horses. The actual value placed upon a given horse is made by his capacity to meet a certain demand. The demand on the market exists for given types of horses and is comparatively stable, but this is not the case with the producer. On the contrary, the man who produces the horses makes use of those animals on hand. If the horses are large he uses them as best he can. If they are small he does the same thing. It is quite probable that a little closer attention to the types of horses used and produced would not only yield a more salable market horse, but in many cases also a type of horse which could more efficiently perform ordinary farm labor. While a casual glance at market quotations shows a large number of so-called market classes, yet a closer study of the same quotations reveals the fact that there are only a few really standard classes. Those standard classes in the main are: draft horses, carriage horses, roadsters and saddlers. The other classes consist of those horses which do not fill any of the four above-named market specifications and consequently fall between or below them. Observation of the prices will show that the really high prices are received only for the high-class drafters, carriage roadsters or saddle horses.

If breeders of horses are producing horses for their own use on their own farms or for their own particular kind of work, they ought to be able to discover the type of horse that best suits their needs. It is hardly logical for any man to attempt to dictate or advise in the case just mentioned. Yet, in the case of the average producer of horses that are to sell on the open market, and in many cases for these horses to be used at home, a few suggestions may serve a good purpose.

A visit to a great city with the idea in view of carefully studying the types of horses used and thereby acquainting one's self with the types of horses demanded from the producer, proves valuable to any man. No better place than the Union Stock Yards can be selected for the observation of horses and the types in greatest demand on the market. To the country horseman in the Union Stock Yards, one of the most noticeable things is the condition in which the draft horses are kept. These teams which haul the wagons for the packing houses and extensive transfer firms are in higher condition so far as flesh is concerned than the average farm horse. An investigation as to the cause of these horses being kept in high condition reveals as a reason the fact that weight is of the utmost importance where horses are to be worked over comparatively smooth pavements. On such streets a horse's greatest ability to pull comes from his own weight, because of the fact that he has no opportunity to get a good, firm footing and exert his muscles. No more striking example of the value of weight in draft horses can be had than this. Another noticeable feature of the draft horses is the fact that those which stand the wear and tear best and have been in service longest are those with good feet and legs. A casual investigation shows that with the great weight necessary and the hard streets which are used, a good set of feet and legs is absolutely essential to longevity of service in draft horses. The same general conditions apply to light horses being used on the streets of our cities, for pleasure or business purposes. They are of a comparatively uniform size and type. They are horses possessing an ability to get over the ground at a reasonable average rate of speed. They are well broken and possess a conformation showing constitution and vigor. If they have lasted any length of time under the conditions which obtain in our cities they possess the most desirable quality of feet and legs.

While there are many unsound horses seen passing through our markets and found on the streets of our cities, the sound ones are decidedly preferable. This is a factor even more important among city horses than among farm horses, because of the fact that the horses used for city work yield their only income through the work which they perform. Any unsoundness, therefore, which in any way hinders the service which they can render, greatly decreases their value. Farm horses which possess some unsoundnesses can still do much farm work, and in the case of mares they can be used for breeding purposes. One does not argue that the use of unsound mares is advisable, yet surprisingly large numbers of mares will be found performing just this function on the average farm.

In order to make the business of horse production yield the greatest profit, then, it is highly advisable to give the matter of markets a close consideration. It is equally important that we give some attention to the horses from which these horses are to come—the foundation of stock out of which we have to build the horses of the future.

The high-class drafter is the horse with size, substance, constitution, quality, action and ability to haul heavy loads over hard streets or roads.

High-class carriage horses are composed of those individuals which possess smooth, evenly turned, symmetrical conformation with ample quality and true, high action both in front and behind. Excessive speed is not necessary. Since the principal function of carriage horses is to carry good harness, haul attractive vehicles, and to make as good an appearance as possible, beauty and symmetry are of particular importance. Size is required up to the point of being able to haul a carriage or other pleasure vehicle.

The high-class roadster or American trotting horse is the horse of good conformation and quality, with considerable speed and the ability to get over the ground for comparatively long distances at a rapid rate. Excessively high action is not desired in this type of a horse. The most convenient size seems to be fifteen to sixteen hands, with weight ranging from 1,000 to 1,150.

The saddle horse of either the three or the five-gaited variety must be beautiful in his conformation, showing more quality than any other type of horse which goes to the market. His head must be clean cut and definite, his neck long and properly set on his body, his withers narrow and comparatively high, his back strong and his rump long and level, and with a well-carried tail. In action the three-gaited horse must show the walk, trot and canter, while the five-gaited horse, in addition to these three gaits, must

In all of the above classes, and in fact with any horse that goes to market, soundness is important. Horses sell best between the ages of five and eight years and usually solid colors are preferred. Well-broken horses are at a premium, particularly in the saddle and harness classes. A lack of attention to these points often makes a difference between profit and loss when horses are shipped to our city markets.

The question next arises as to what available material exists for the production of horses of the above-named classes. The general improvement which must occur in any given line of live stock production must come largely through the use of good sires, because of a sire's effect upon such a comparatively large number of individuals of each generation. The use of inferior, nondescript sires while yet practiced to some extent, has long since been found to be one of the factors which tends to decrease the profit, hence in the selection of sires we are forced to look to the ranks of registered stallions.

We find, upon investigation, that the breeds of horses divide themselves much the same way as do the market grades and classes. Practically none of the horses which go on the market to sell are registered horses. They are in most cases horses of more or less mixed breeding, and at best only high grades of a given breed. This fact points to the mare stock which exists in the country. It consists of native and grade mares approaching the standard of the high-class market horses in some cases, closely, in others only remotely or scarcely at all. With this class of mares and stallions from the ranks of the good registered horses their future production will yield the greatest profit.

There are five principal breeds of draft horses, viz: Percherons, English Shires, Belgians, Clydesdales and Suffolk Punch. Good individuals of any one of these breeds may be used to produce high-class draft horses, and the inferior stallions of any of these breeds should be discarded as quickly as the unregistered inferior stallion. It is highly advisable in most cases that these breeds be maintained separate and not crossed back and forth. Cross breeding among the breeds of draft horses tends to break up type and leads to a lack of uniformity.

For the production of high-class carriage horses or heavy harness horses, the American trotting stallion of proper type, quality and action and the Hackney have met with the greatest success in this country.

The roadster and the American trotter are the result of the use of good sires from the breed of American trotting horses. This breed has been developed in our own country, has been developed particularly for use in this country. Consequently other breeds are handicapped in competing with them in the production of this type of horses, and comparatively no other blood appears in our road horses and trotters than that of the American trotting horse.

The three-gaited saddle horse has been produced by different systems of breeding. Some of them have carried portions of Hackney blood, some have been American trotting horses, still some others of thoroughbred lineage and more frequently are they found to trace to American saddle horses. The type of horse demanded is that of extreme finish, quality and beauty, as well as intelligence, and these characters seem to be more readily obtained through the use of American saddle horses. The five-gaited horse has only one principal source of lineage, viz: The American breed developed for that purpose.

In the use of sires of these various breeds many horses will appear as offspring which do not possess the desirable characteristics to the marked degree that is found in their sires. This may be due in some cases to the fact that the stallions are not prepotent, but in the majority of cases it is due to the fact that they have been mated with native mares of more or less indiscriminate lineage. As time goes on it is to be supposed that the mare stock of the country will be "graded up" in one line or the other until they more nearly approach the type of high-priced horses on the market. When this is the case the use of high-class stallions of similar breeds will lead to a more certain production of a high-class lot of market horses.

It is evident that there is not a recognized breed of horses with which to supply each of the market grades. The question may be asked as to why this is the case, but a casual study of the situation will bring to light the fact that many of the less stable and cheaper classes of horses are not demanded in large enough numbers to make the establishment of a breed for that purpose worth while. The fact will also present itself that by the time a breed could be established, (and this would take from twenty-five to fifty years at least), the demand for that type of horse might have become extinct. Time has proven that the demand for the five principal classes named above is stable and the grades of these various breeds will supply the demand of practically all of the market grades and classes, hence the advisability of the establishment of a new breed to meet any of these minor demands would be questionable.

In conclusion it can be said that in our horse production it has proven more profitable to aim at the production of horses which will meet a constant, steady demand at comparatively high average prices. In so doing failures will be all too frequent. An important feature in this scheme of production is the gradual "grading up" of the producing mares throughout the country toward one or the other of these types. This can be accomplished more rapidly if the breeds are kept entirely separate. The man who starts out by using a Percheron sire will find it profitable in the long run to continue using a Percheron sire for several generations. This will not only result in the production of a high-class lot of market horses, but an excellent lot of grade mares for breeding purposes. Lastly, the sires used should be only the very best that can be secured in a given breed and only high-class registered sires should be used, if the best results are to be expected. While this system of production is comparatively simple, it has been carried out with remarkable success by many men and the best proof of its value is the fact that those men who have followed the practices herein named longest are continuing the same practices because they have received satisfactory profits.

THE USE OF SERUM FOR CHOLERA.

To the Editor

On the fifth day of June, 1912, we vaccinated 105 head of hogs with state serum, single method. We did not lose a single hog, but abscesses formed on some and we had to open these. As we wished to find out whether the treatment was a success we took two of our hogs to a neighbor's three miles away and put them with his herd which had the cholera. These two were the only ones that lived out of his herd of sixty hogs. My brother had his hogs treated with the double treatment. Although they were fine-looking hogs when treated he has lost seventeen out of fifty-six at the present writing.

We think the single treatment is all right, but the double one is a failure, judging not only by this experience, but by the experience of breeders with whom we have talked at shows.

According to our understanding they want only a state veterinarian or his assistant to administer serums, but we think there are some veterinarians more capable of handling the serum than the assistant. In some localities the poorest veterinarians are appointed assistants. We have always secured the services of a veterinarian from our home town and never had any bad results. In our opinion the fault is in the serum, as a rule, and not with the veterinarian. F. Bieth & Son.

Look over the drain tiling early. Rats, rabbits and other small animals often work up the soil and clog these outlets, or clods crowd into them. Conditions sometimes cause the tiling to collapse and crumble in. When the spring thaw sets in any of these accidents will allow the land to be soaked like a sponge unless these obstructions be removed and an open passage provided for the water.

Hercules at a nice profit. Why don't you get

The Wonderful Hercules

The Hercules is the only genuine All Steel Stump Puller made. It is 60% lighter and 400% stronger than any iron puller made or any "semi-steel" puller. The Hercules has ample strength to pull out any stump or green tree or hedge. Its triple-power principle gives it a powerful pull—yet easier on the team than any other puller ever made. Either self-anchored or stump-anchored. Built low to the ground. It can be furnished with 200 feet of cable—enough to pull 3 acres of stumps without moving the machine.

It is sold on 30 days' free trial, backed by a 3 year guarantee that insures the free replacement of any castings that may break from *any* cause, flaw or no flaw, at any time within 3 years from date of purchase.

My New Low Prices

This year I have set aside a limited number of Hercules Stump Pullers for the first buyers, at a price that will clean them out quick. Send me your name now on the coupon—or just use a postal—*but send it today*. My new book will surprise and please you. See the real pictures, from 25 different states, of big stumps the Hercules has pulled out like you would pull weeds. Read the many interesting letters from farmers, lumbermen and land promoters.

I'll send the book and special price offer by return mail. I'll tell you the best crops to raise on virgin land where stumps were before. I want you to get my free book and special price proposition at once. Mail me the coupon or postal right now, before you forget, or take down the name and address and write me soon. Address me personally.

WITH THE EDITOR.

A noble life leaves its fiber in the fabric of the world.

When speaking of life we mean existence on this physical plane. It is apparent sometimes that "life is not the sweetest gift God gives His friends." When the body is consumed by some terrible disease and the nerves racked by continuous pain, sometimes what we call death is a gracious release. It was so with one dear to us all, our friend Mrs. F. W. Vanderhoef, who has entered on the larger life of those who drop the mantle of the body.

As the friends know, Mrs. Vanderhoef had for some time been a sufferer from an incurable disease. She knew that her days were numbered, but her courage was undaunted and her love as untiring as ever. Her interest in our Home Department was unabated, as her last message abundantly testified.

Her friendship for its editor was equally warm and when her arm became powerless her heart still sent messages of love. At the last, when it became evident that she was soon to go hence, a letter of farewell was dispatched. Next day a voice not to be denied whispered: "Send Mrs. Vanderhoef 'Crossing The Bar.'" So with a heart filled to overflow with tenderness the poem was copied and to our friend's closing ears wafted the music of Tennyson's immortal lines:

Sunset and evening star,
And one clear call for me!
And may there be no moaning of the bar,
When I put out to sea,

But such a tide as moving seems asleep,
Too full for sound or foam,
When that which drew from out the boundless deep
Turns home again.

Twilight and evening bell
And after that the dark.
And may there be no sadness of farewell
When I embark;

For though from out our bourne of Time and Place
The flood may bear me far,
I hope to see my Pilot face to face
When I have crossed the bar.

The next word from Strool brought the news that death had called Mrs. Frank W. Vanderhoef.

The parting is sad, the loss is great, but we cannot grieve that our friend's suffering is ended; rather should we rejoice that her pilgrimage has ended and that she has entered into rest. It is not the Home Department custom to comment upon the passing of its members, but Mrs. Vanderhoef was with us so long, she was so well known and she was so beloved that an appreciation seems fitting. It seems fitting too that a fellow member and an old-time friend should have the privilege of paying tribute to her whom we all love. Mrs. Sophie C. Liland speaks for us all in what follows:

A letter, a brief note from a sorrowing daughter lies before me, received today, and I read: "Mother left us for the better world after many months of intense suffering, but oh, it is so hard for us to let her go." It was written by Mrs. Louise Swanson, of Strool, S. D., and "mother" was our own beloved Mrs. Frank W. Vanderhoef, a member of our home for many long years, one of the dear, helpful sisters who helped make it a place where we may come for advice, instruction, sympathy and entertainment.

Frank W. Vanderhoef was not a "pillar in the church." I do not know whether she was affiliated with any so-called denomination, for in our long acquaintance and close friendship and heart to heart correspondence, church was never mentioned, but she was one in whom the Lord delighteth, for she constantly and continually preached the gospel of cheerfulness and the religion of kindness and patience, which makes our belief in goodness strong. When I first knew Mrs. Vanderhoef she was an Iowa woman and it was at the time when "Maude Meredith" was the housekeeper in our home, and I wrote as "Eugene Bassett." From Iowa she moved to Montrose, S. D., from there to White Rock in the same state, and it was while there that the husband of her youth died very suddenly in a hospital in Minneapolis. The body was brought home to her and laid to rest in that tent "whose low green curtain ne'er swings outward," and she was left to fight the battle of the pioneer alone. With three sons and a daughter she went to Strool in the far western South Dakota and commenced all over, that her children might be near her. The winter following she accompanied her mother to Berkeley, Cal., where developed the dread cancer. We know how helpful her letters have always been, her last one written after two dreadful operations in which she told us how much her children helped her in the unfolding of character and strength of purpose. But it was in the personal letters I knew her best; how she taught school, carrying her younger children with her; how she was the prime mover in the neighborhood circulating library in that sparsely settled country, when the best books of all the settlers were gathered together and went the rounds of the primitive homes; how little socials were given and one book after another was added to this collection; the story of her bravery and courage during drouth when want and suffering were paramount in the Dakotas, when she an invalid practically and really sat in bed for weeks and sewed and planned for her less fortunate neighbors. I treasure the dear letter of sympathy written me from a heart that knew, when my own dear soldier husband was called by the Great Commander to his eternal peace. She was the woman one could go to in sorrow, in trouble, and find consolation and support, and withal she found time to visit our home with her cheery, helpful talks.

And what a legacy she has left us and her family of devoted, loving children. The memory of a home where love reigned, a comradeship with "mother" that the four sons can never forget; the sympathy and companionship and "chummy" relationship existing with the two daughters, and the tender, protecting, superior care given to the dear little grandchildren in a land forty miles from a railroad and six to the nearest doctor. We who live in close communication by telephone, automobile and all the modern facilities for comfort can hardly comprehend the privations of those who are opening up the great "Far West." The real record of her life and its value cannot be accumulated and tabulated in verbal statements. The impress of her life is stamped on every life with which she came in contact. Here a thought imparted, a fact impressed, and in some other life an ideal gained by her noble living. And so hundreds of lives will move on a higher plane because Frank W. Vanderhoef has lived. Heaven and eternity alone can reveal what she did for and was to others in her genuine, unassuming way.

We of our home will cherish her memory as we shall miss her cheery visits, but we know she has "crossed the bar;" that she has seen her "Pilot face to face" and joined her husband in that land where there shall be no more going out forever; and while we shed tears in sympathy with loved ones bereft, for thee, kind friend and dear sister, we will sing the songs of victory, and rejoice in thy great triumph, and so hail and farewell.

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

Not in the clamor of the crowded street,
Not in the shouts and plaudits of the throng,
But in ourselves are triumph and defeat.

The heights by great men reached and kept,
Were not attained by sudden flight;
But they, while their companions slept,
Were toiling upwards in the night.

But He, who knows our frame, is just,
Merciful and compassionate,
And full of sweet assurances
And hope for all the language is
That He remembereth we are dust.
—Snowbound.

The problem of character is the problem ultimately of self-control.—J. R. Lowell.

Character gives splendor to youth and awe to wrinkled skin and gray hairs.—R. W. Emerson.

YOU OUGHT TO KNOW.

It is becoming customary for the farm boys and girls to go to the moving picture show when in town. Therefore the farm parents should interest themselves about the character of the films shown and co-operate with the city fathers and mothers about the censorship of the place. Has your nearest town a moving picture show? If so, do you know the character of the pictures being shown? If not, you ought to know.

AROUND THE HOUSE.

A shoe horn is a great help when putting on children's rubbers.

Get the kindling ready the night before. It is a real pleasure, these cold mornings, to find a well-filled basket all ready.

Do not waste time and energy trying to wash the bean pot the same day it is emptied. Put it in a pan of water for a day and then it will clean easily.

If you want to make the very best coffee, free from grounds and which will need no straining, try the experiment of putting it in a little muslin bag before placing it in the pot. You will be surprised at the result.

The cold strikes up through a mattress that just rests on springs, and makes one cold in bed at night. Lay several thicknesses of newspaper over the springs; this will keep out the cold and save the mattress from wear.

IN THE KITCHEN.

Codfish Cakes—Wash one pound of salt codfish (the whole fish is decidedly preferable to the boneless codfish bought in packages), put in cold water to soak for three hours, then place over the fire in fresh water, bring to boiling point and strain. Pick into fine shreds. To each cupful of codfish thus shredded add one cupful freshly boiled potatoes, one egg, small pieces of butter, a tablespoonful of milk or cream, and pepper to season. Mold into cakes, dip lightly in flour, brown in oil or butter and serve piping hot.

Celery Soup—A delicious soup, which has the further merit of being cheap and easily prepared. Enough for four people costs about ten cents. Take half a bunch of celery, using root and outer stalks, which are the strongest in flavor. Boil these about three-quarters of an hour with a little chopped onion. When soft press it through a sieve and add a pint of milk. When about to boil add a tablespoonful of flour and cook till it thickens, stirring all the time, and at the last add a tablespoonful of butter. Serve with croutons of bread or oyster crackers.

Oatmeal Bread (fine for children)—Two cupfuls of oatmeal, one cupful of Indian meal, eight pints of boiling water, one tablespoonful of salt, a dessertspoonful of sugar, one cake of yeast, flour for stiff batter, one cupful of raisins or nuts. Mix oatmeal, cornmeal, sugar and salt together well and pour into a hole in the center the boiling water, stirring the dry mixture down into it with a wooden spoon. Cover with a cloth and let it stand until it is lukewarm. Dissolve the yeast cake in warm water and beat into the batter with a cupful of flour or enough for a tolerably stiff batter.

CLUB RAISERS WANTED

I want a local subscription representative in each town in Iowa, Illinois and Nebraska, where I do not have a solicitor at present, to take subscriptions for The Homestead during the winter months. An energetic person can make excellent money working for me.

A Justice of Peace and farmer made $347.00 during December, January, February and March last year with practically no effort on his part. Just as he happened to meet his friends he asked them to subscribe.

An old soldier has earned $386.00 in the last year and has not been away from his blacksmith shop to solicit subscriptions.

A lady who had sold extracts all her life took up our work last winter and has made over $300.00 this year without leaving her home town.

It requires no particular ability to become a subscription representative. There is no reason why you should not make from $300.00 to $600.00 this winter, looking after my subscription interests in your locality.

If you prefer premiums to cash commissions, write us for a list of the nice presents we can make you for raising a club in your neighborhood. We have everything useful to give away from egg beaters to sewing machines and gold watches. Address

James M. Pierce, Publisher Homestead, Des Moines, Ia.

WE TEACH YOU

Learn to operate and repair automobiles. Training on vulcanizers, drill presses, lathes. Pattern making, moulding, brazing and driving. Free catalog. Address
LINCOLN AUTO SCHOOL,
2338 O St., Lincoln, Neb.

Lock Stitch Sewing Awl FOR YOU

This Awl
is a wonderful tool and a household necessity. Diamond ground needles and complete supplies including thread, come with every outfit. Can be carried in pocket. This awl will save you many a trip to the shoemaker and harness shop. Given free with a two-year subscription to People's Popular Monthly Great Home Magazine, for only 60 cents.
PEOPLE'S POPULAR MONTHLY
Dept. 2, Des Moines, Iowa

Let this sponge rise until it is light. Then work in more flour if needed to make dough as stiff as may be stirred; beat in the raisins or nuts and turn into pans for the last rising. Bake three-quarters of an hour.

AMONG OURSELVES.

Before the holidays "A Bachelor" interested us with his views regarding enforced church and Sunday school going. The replies that his argument brought forth had to be laid aside until we had left the turn of the year behind us. Today we will examine the points that others have to present on the negative side of the question.

As the writer was one of our men friends "Among Ourselves," your editor thought best to have other of our men attendants make reply to his arguments. And first we will hear some historical arguments by Bill B. Taylor, who thinks:

Mr. "B" is no doubt a good Christian as he sees things, but he seems not to be very conversant as to history of "church" and compulsory laws. I should be pleased to go back in history a few thousand years and take up the story of the different nations and "religions" that have tried compulsory worship law, but space would probably not be allowed me. Mr. "B" should remember that our country ("this glorious land of the free") began with just such laws as he proposes, and, if he will study the early histories of the colonies of the now United States of America, he will learn that those laws were a detriment instead of a benefit. The old Puritan laws (which afterward developed into the blue laws) were such. Sunday began at sundown Saturday and continued until sundown Sunday. There one went to church Sunday morning and listened to a long, dry and idiotic sermon, and then with an hour's rest—wandering among the graves of the uninteresting dead—went back to the church for another long sermon of brimstone and torment. Did this produce good? No! Quite to the contrary. It turned some of the best minds of that period into the greatest and most convincing infidels the world has ever known. Mr. "B" says: "The human family is much like a family of children, and like to do as they please, but do not always please to do well, so we should have laws to make them do." This is rather confusing philosophy when we remember that the very same children make the laws they are to be governed by! The law Mr. "B" mentions would be invalid and unconstitutional under present conditions. Mr. "B" says "we have laws, forcing Sunday observance." In general we have no such a thing! There are some municipal laws to that effect, but they are in force only by local consent. But supposing we had the law for compulsory worship, how long would it be before the strongest church would want (and get it, too) a law compelling everyone to attend or at least pay tribute to them? You say this could not happen, but it would happen. It has been the outcome always, where church rules were forced on a people. Then what follows? Slavery, then war! This is one of the prime causes of the war in the Balkans today. What we need most is more happy and beautiful homes. Not beautiful in the sense of riches, but in the wealth of love, companionship and forbearance.

Another of our men, G. B. Thompson, examines this subject from two widely different standpoints. He raises the question, "Is Sunday a religious or a civil institution?"

If Sunday is a religious institution, then the state can never properly have anything to say as to its observance; for it is not the province of the state to settle religious questions, and command the observance of divine precepts. It might be proper for an ecclesiastical council to give consideration to such matters, but the function of the state is not ecclesiastical, but purely civil. Religion is a thing of the heart. It is the personal relation between man and his Creator, and for it we are amenable nowhere, except at the tribunal of the Universal Judge. Because, therefore, Sunday is an institution of the church, not of the state, and its observance is a religious act, congress can never rightfully pass any law regulating its observance. To parry the force of this, however, the claim is advanced that Sunday is not a religious, but a civil institution; and, as the state should deal with civil matters, it should regulate the observance of the day. But if Sunday is a civil institution, why should its observance be made compulsory? We have holidays which are purely civil institutions; for example, Washington's birthday, the Fourth of July, and other legal holidays. But who ever heard of the observance of these days being made compulsory? When has a bill ever been introduced into any national or state legislature specifying how these days should be observed, and closing up all shops and business houses and places of recreation, under penalty of civil law? All would resent such a step and deem it tyrannical. But if Sunday is a civil institution, it is merely a holiday, and should be dealt with the same as other holidays. Upon whichever horn of this dilemma so-called national reformers impale themselves, it is equally fatal to their theory and emphasizes the truth that legislation concerning Sunday is not within the province of the state.

One more of our men writers takes up the discussion. "Illinan" evidently is practical. Time and place do make differences, and it is a matter of regret that those who desire to join with others in this matter of Sunday observance are, by the necessities of their location, means of getting about, and the state of the weather, denied what is longed for. There is no greater question to be solved in our United States than this—a social life for all given in due proportion of quality and quantity:

I was reading what "Bachelor" wrote. It was a good piece, but I do not agree with "Bachelor," for he cannot practice what he preaches because he hasn't a family to raise. Would a law compelling people to go to church make them better? Would they love God? You cannot make a person love either good or God; one must do that one's self. You can help in different ways, but not make, for that belongs to the plan of God. "If any man wishes to come after me, let him deny himself and take up his cross and follow me." You don't know, "Bachelor," how hard it is to get children ready and go three or four miles to Sunday school, but I do. We went because we loved God; wanted to be with God's people, and we try to raise our children in the "straight and narrow way," so that they will not depart from it in their old age. I don't think I would have succeeded in going if the law of man had tried to make me go. There are rural places where it is too far to go to church; where it is five and six, even seven or more miles to any church. In summer they have Sunday school, but it dies out in winter for lack of interest. If some preacher or worker would get up interest he would soon have a church, for the people are well to do, but the preachers are lacking—not enough to go around—so there is not one to take the needy, but neglected places. I don't think your plan feasible, but there is a decided need of more churches in country places where it is too far to go to other churches even when desirous of fulfilling the law of God, to say nothing of externally obeying a law of men.

Our institutions are the most fundamental part of our national life. They have grown slowly and they will be changed slowly. Each community brings about its own changes. Even as the food must be assimilated to be of any value, so the wise ideas of one community cannot be thrust upon another, but must be grafted upon it as fast as it is ready to receive. There are thousands of fine Americans who have it in their hearts to bring about a richer life than we are enjoying today. A life whose richness will be internal rather than external, which will flow from within outwardly, a life which will not be a satisfaction to a few in a community as is too often the case today, but one where all may, and will, without the application of external force, be in the possession of a full share of the real things of life.

Helping hands are reached forth to those who have had trouble with their bread and sun-dried fruit. Be sure you cut these out and file away. Talking of filing how do you keep your recipes? What plan do you find enables you to turn to a recipe—cooking, household, medical—when you are in a hurried need for it? Have you a scheme so that when an emergency arises you can quickly and comfortably meet the situation? Tell us about it, please:

I wonder if the sisters who had trouble with their bread found the cause of it? We had the same trouble here a few years ago, and the experts told us that it was caused by diseased wheat being used in the flour—some kind of smut, I think. Bread that was well raised and baked in a hot oven for an hour, and entirely cooled—that is, left over night before putting away, each loaf wrapped in a paper, and kept in a good box in a cool, dry place—should be perfectly good and not too dry, for a week. But with this flour the bread becomes stringy and sticky, looks white in places, and the smell is unbearable within twenty-four hours after baking, no matter what care is used. If the flour has been kept in wooden bins it seems impossible to disinfect them, so that it is never safe to use them again. One of the large flouring mills found that their flour had this disease and disinfected their bins so thoroughly that they were believed to be safe. The next flour was found to be infected, however, and they were obliged to tear out their bins and replace them with new lumber, at a cost of many thousands of dollars. When the disease appeared here one of the best brands of flour was affected the worst and it was necessary to drop that brand and withdraw it from market, as there was no sale for it afterward. The trouble is entirely in the flour, so there is no use in attempting to find a different way of using it, in hope that the bread may be good.—N. M. L.

To keep sun-dried fruit from getting wormy, when the fruit is well dried in the sun put a thin layer in a dripping pan in the stove oven and heat thoroughly, then pack in a stone jar while hot and press down very hard. Tie the jar over tight until the next batch is ready to go in. When the jar is full spread a cloth over the top, then turn a well-fitting earthen plate over the top. Tie first with cloth then with paper. Must be packed hot. It will keep well.—J. K. B.

THE YOUNG FOLKS

Letters and Articles for this Department Should be Addressed to Aunt Mary, Hawley, Minnesota.

LEARN THIS BY HEART.

A bunch of golden keys is mine,
To make each day with gladness shine.
"Good morning!" that's the golden key
That unlocks every day for me.
When evening comes, "good night!" I say,
And close the door of each glad day.
When at the table, "if you please"
I take from off my bunch of keys.
When friends give anything to me
I use the little "thank you" key.
"Excuse me," "beg your pardon," too,
When by mistake some harm I do.
Or if unkindly harm I've given,
With "forgive me" I shall be forgiven.
On a golden ring these keys I'll bind.
This is its motto: be ye kind.
I'll often use each golden key,
And then a child polite I'll be.
—Selected by Pansy, age 14.

Winners of pansy badges are Eden, E. M. P. and Happy Thoughts.

No address, Queen Isabell, Rainbow, Lonely Girl. Written on both sides, De Pera, George Hinshaw, George Douma, Rainbow. These get no credit. Try again.

FOR CHAPPED HANDS.

Wildfire is advised by Arkansas Girl to wash her hands in vinegar before going out. She says rubbing dry meal on them is also good.

Young Reader gives a formula which he thinks will make the hands smooth: One ounce glycerine, five cents' worth citronella, five cents' worth gum tragacanth. Soak gum in one pint soft water over night; then beat in glycerine and citronella until thoroughly dissolved.

Interesting Puzzles.

1. In the following sentence find twenty or more plants growing in my vegetable garden, using each letter as many times as needed: G. D. Cob, then squawk primly.—Harrie, age 9.

2. Before each of the following combinations place a letter so as to make a word. These prefixed letters, in order given, spell name of one of the states: Old, nly, and, ral, ipe, ble, oor, val.—Me, N. D.

3. Change the following groups of letters around a little, and make names of capitals of foreign countries: Kooty, rotilpi, obotag, donnol, jakevirky, imal, jenicet, boramirapa, rubsless, noblis.—Brooklyn, Iowa.

Answers given next week. For the best set of answers received before the answers are published we will give a good game. Address Aunt Mary, Hawley, Minn.

Snow Bound.

"Announced by all the trumpets of the sky arrives the snow."

Such evenings as this is when we enjoy the "tumultuous privacy of storm," sitting around the hot fire, cracking nuts and popping corn, while the northwest wind howls and the sleet beats against the windowpanes.

Big Doll For You

Nearly Two Feet Tall

This beautiful doll is 18 inches tall, jointed at shoulders and hips. Her eyes open and shut, she has long flaxen hair and is beautifully dressed. You will be the proudest girl in your neighborhood, when you get this doll, and she is yours for just a little easy work. I expect to give away 5,000 of them. Write today for great free offer.

PEOPLES CO.
802 Popular Bldg.
DesMoines, Iowa.

What long poem do you think I have been reading this evening? It is one that we enjoy more when there are

"No clouds above, no earth below,
A universe of sky and snow!

I sometimes find it hard to decide which is the prettiest, a summer scene or a winter scene. In every season the country is prettier than the city, because "man made the city, and God made the country."

I suppose you boys are having a fine time hunting and trapping, and you girls reading. I have been reading "Oliver Twist," by Dickens, and wonder if the children in all workhouses are treated so cruelly. When I come home from school and see our little snow-roofed house with the smoke curling out of the chimney I feel so thankful that it is my own home and in it are my father and mother waiting for me. I wish that every girl and boy had a snug home, and a kind father and mother to take care of them this cold weather.—Morning Glory, age 15.

Preparing For Our Life Work.

Today, I have been reading in the Young Folks' columns, and it seems as though I can hold my pen still no longer. So here I come to join your chattering circle. Oh, how my heart would leap with joy if I only knew that this grand and glorious old nation has a throng of bright, intelligent boys and girls today, which tomorrow will be able to take up the work of our forefathers, and carry it through with brilliancy to success.

But eheu! fugaces labuntur anni! So cousins, let us all take heed to the fast fading of this blooming youth of ours, and begin early to prepare ourselves, so that when we must stand up, another generation, we may stand glorified in our own work around us.

And isn't this a grand old world to live in anyway? With its green forests, its gorgeous flowers, and rich velvet cloak in summer or in winter with the snow-covered ground, and icicles hanging from everywhere, it seems one great palace of diamonds. Where is the person that can find time and space to worry and grumble with all of God's good things around them? He must be dull indeed who cannot appreciate all those wonderful gifts that God has given us.

How many of you like to compose verse? I do, and have composed several poems. Bedouin, I think your letters are extremely interesting, and would like to read your poem entitled, "My Mother's Grave."

I have read a great many books, but have no special favorites among them. All I want is just a "good book," and everything else is lost to my thoughts, until I have mastered its contents.—Katheryn, age 16.

Remarks and Short Calls.

The ground is covered with pure, white
snow;
The birdies have all gone south, you
know;
The children with furs out to play will
go
In the pure white snow.
—Hayseed, age 9.

Our handiwork contest closes tomorrow, and the results will be announced as soon as possible.

Handiwork will put you on the Roll of Honor just as readily as literary work.

Silver Star's class is seeking a motto. She sends one which is good for us all: "Climb, though the rocks be rugged."

Queen wishes to thank all who sent her sample invitations; they were all very pretty. Adelheid won the prize, which was a brooch.

Brown-eyed Marguerite wish s someone would send her directions for playing "Double Pinochle." Address Margaret Coleman, Rt. 7, Oklahoma City, Okla.

Those who have their names on the Roll of Honor three times may have a pansy badge free, by asking for it, giving dates your name was printed.

Moonflower tells of a New Year's Day picnic in the meadow, where a butterfly came and helped himself to the eatables. No, it wasn't a dream; she lives in Arkansas, that's all!

Ozark Girl writes: To remove green walnut stains from clothing, pour coal oil through the stain, rub hard between the hands, then wash in the usual way, and the stain will disappear.

Any "pansy badger" may have a silver honor badge when his name has been on the Roll of Honor three times after the award of the pansy badge was published. Write and ask for it, giving dates.

"How often shall we write?" some ask. The best way is to wait after writing until you see your name on the honor roll. If it doesn't appear there, or under it, in three weeks, try again, anyway.

"And what shall we work for now?" ask the "silver badgers." When you have had your name on the Roll of Honor ten times after the notice of your silver badge has been printed, you may have a gold badge free by writing for it. But be sure to give dates.

PLEASANT FIELDS OF HOLY WRIT

SAVE for my daily range
Among the pleasant fields of Holy Writ
I might despair. Tennyson.

The International Sunday School Lesson

FIRST QUARTER Lesson V. Genesis VI., 9-22; VII., 11-24. February 2, 1913

THE FLOOD—THE STORY.

In the incomparable picture gallery of the Scriptures there is no canvas like that which presents the ark and the flood. It is too bold and tragic to be passed. It arrests and stirs the most indolent mind. Once caught upon the sensitive plate of a child's memory, it will never fade. Its unspeakable horror is mercifully mitigated by such gentle incidents as the door shut by God's own hand, the dove with olive branch, and the rainbow spanning all. The Noachian deluge only precipitated the inevitable. It was an act of Divine mercy as well as justice. In the great conflict foretold in Eden between the serpent seed and the seed of God, the former were ascendant. The conditions were aggravated by intermarriage. The sons of God, the descendants of Seth, were lured by the siren daughters of Cain, so that they chose their wives irrespective of the Divine will. All the proverbial sin and sorrow of misalliance followed. The very physical hardihood of the offspring made their moral obliquity more deadly. Every conceivable lust was rampant. The seed of God was reduced to a paltry contingent. It was on the verge of extinction. The whole race, in fact, was committing suicide. It was destroying itself. Earth would have soon been like a desolate island whose sanguinary population had consumed itself through lust, murder, and cannibalism. The flood was a great mercy. It shortened the irretrievable misery of the race then living. It kept the seed of God alive. It was an object lesson the world has never forgotten. God's election to salvation is based upon the normal qualities of those whom he chooses. There is striking illustration of this in the character of Noah. He found grace in the eyes of the Lord, not through caprice and favoritism, but because in a wicked and adulterous generation he shone like a light, and lovingly held forth to a dying race the word which, if received, would have proved life to them. He was a just man and upright, and walked with God. He was fit to be the second Adam, the progenitor of a new and hopeful race. And to this end God spared him.

The Teacher's Lantern.

Rivet attention this paragraph certainly will; it is so scenic. It fairly teaches itself. The natural method is followed. It describes the condition of the race before the flood; the superlative wickedness which made that wholesale destruction an act of mercy as well as of justice; how the irretrievable misery of the human family, which had doomed itself, was cut short, and a chance given to begin anew under happier auspices. Noah's upright character shines against the universal degeneracy of his times. It proves one can be good in spite of one's environment. A boy can keep his lips unsullied, though the air around him is blue with profanity. He need not lie, nor cheat, nor gamble, though those with whom he is thrown in school, shop, or store all do. If he keep upright, he will prove God's instrument of good to his fellows. Implicit and persistent was Noah's obedience. He showed his faith by his works. He never grew weary in well-doing under circumstances calculated to try him to the uttermost. So his name richly deserves to be engraven on that tall obelisk, Hebrews XI, reared to the heroes of faith. His very character and course was in itself an indictment and condemnation of the world before the flood. Heir to two worlds, Noah stepped out of the ark sole monarch and proprietor of all he surveyed with the natural eye, and beyond that the better inheritance, even the heavenly. So God rewards—a hundred-fold in this life, and in the world to come everlasting. A bone of contention has ever been the question whether the flood was universal or not. The arguments pro: (1) Natural conclusion from language of Scripture. (2) No evidence to prove that the population of the earth was confined to a limited locality. (3) Impossibility of piling the waters up in such manner as to cover the mountains. (4) No need of taking birds into the ark if deluge was only local. Arguments contra: (1) Universal Deluge unnecessary to accomplish the end desired. (2) Ark could not have given room for every species. (3) To cover highest mountains, water must needs be five miles deep. Ten miles added to the diameter of earth would destroy the equipoise of the system. (4) Universal prevalence would have produced change of climate. (5) Overflowing of salt water would destroy plant life, and fresh water animal life. Still pending is the case, with the drift of the best modern comment, however, decidedly in favor of a local deluge.

SLED THAT STEERS, FREE
YOU CAN HAVE ONE.

Send No Money

This is the greatest sled for boys and girls ever manufactured. Known all over the country as the "sled that steers." Runners are spring steel, and when you coast down hill a slight pressure of the foot curves them and steers the sled to one side. No digging in the snow with your heels or plowing the snow with your foot. Not one boy in a hundred has one of these sleds. You can have one for a little easy work. Write me today and I will tell you all about it.

A. M. PIPER. 840 POPULAR BUILDING, DES MOINES, IOWA.

VETERINARY MATTERS.

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

WARTS AND RINGWORM.

Have a bunch of calves fed on corn and shredded fodder. They have warts or sores coming around their eyes and nose. Calves are fed in lot where they are fed each winter and every winter they become this way, but the sores disappear when they are put on grass. What is the cause?

If masses of small warts are present simply rub the affected parts once or twice daily with best castor oil and they will soon disappear. We think, however, that ringworm is present and it is due to vegetable parasites. Scrub and scrape each part perfectly clean. Then rub in a little iodine ointment each other day until cured.

WOBBLY COLT.

I have a bay colt coming two years old that seems to be stiff and weak and so clumsy it is hard for him to back up. I do not think he got hurt, as he seemed to get that way gradually last fall. He eats well and has made good growth the last year. If he turns around quickly he sometimes falls down. Has had plenty of exercise, running in the pasture all summer and in the stalks this winter.

Mysterious stiffness and wobbling gait such as you describe often indicates that incurable disease known as osteo porosis (big head). Keep the colt out of cornstalk fields. Feed liberally on a ration of equal parts of whole oats and wheat bran. Allow plenty of good mixed hay. Avoid all moldy feed. If worms are seen in the droppings, treat according to directions often given here.

ADDITIONAL FIELD NOTES.

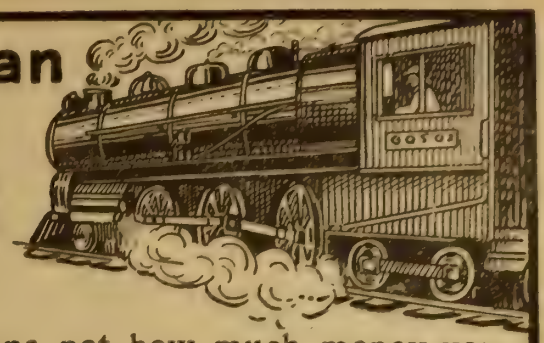
La Doux Sells Big Chester White Sows.

F. W. La Doux, Spirit Lake, Iowa, who sells Chester White bred sows at the fair grounds in Spirit Lake, Iowa, on Thursday, February 13th, is comparatively young in the business of breeding Chester Whites, but it is doubtful if many have made more rapid strides than he. This statement is a result of measuring his herd by the standard in many long-established ones and he has not only averaged up well, but he has succeeded in securing one feature that farmers are seeking in many places and find in fewer than they should. His boar, Gold Coin, not an extraordinary prize-winning sort, or at least with no such record, has made a record of another sort which certainly recommends him to consideration. It is doubtful if many boars breed more bone and better feet on their get than we saw in the bunch of pigs sired by this boar and now in Mr. La Doux's yards. The pigs are well made, too, have nice proportions and have grown out big. These features mean much to the practical hog man and we recommend sows bred to him as good property for buyers to look for. Gold Coin is the sire of most of the gilts in the sale and a good many of the sows are bred to him. Old Joe Cannon, the premier herd boar at this place for the last couple of years, is a big boar also and certainly has been a valuable breeder. He is now owned by another prominent Chester White breeder and is doing good service in his new quarters. He is by the well-known Onward, with bred Mr. Nagle, Deep River, Iowa, made a record, and is out of a good sow by Dunbar's Choice. Mr. La Doux bought a spring boar last fall by a good sire, out of a great sow by the champion boar, Sam B., which won a purple ribbon at Huron, S. D., last fall during the state fair show there. This herd has produced profitably and the sows are the prolific sort. This is a character that has been a prominent feature in the selection of breeding stock in the herd. The sow, H. C. Keep On, for example, has had in four litters produced on this farm thirty-nine pigs, and has successfully raised thirty-six of them, an average of nine per litter. No one need be afraid of losing money on sows that breed this way. There will be more about this offering in next week's paper. Watch for it. Write now for catalog, addressing F. W. La Doux, Spirit Lake, Iowa, and mention The Homestead. Send your bids to G. M. Thompson, Homestead representative, a practical Chester White breeder. See advertisement on page 45.

Waltemeyer Bros.' Great Duroc Sale.

One of the important events to take place in Duroc Jersey circles is the sale to be held by Waltemeyer Bros., Melbourne, Iowa, on February 11th. Such an array of Duroc Jersey bred sows have seldom been offered at public auction in Duroc history. It is doubtful if any boar of the breed has sired as many state fair champions and prize winners in the same length of time as has their great boar, Golden Model 2d. Golden Model 2d was second in the aged class at the Iowa State Fair in 1909 and first at Nebraska the same year. Since that time he has sired the majority of the animals that have won for Waltemeyer Bros. 275 ribbons, the most of them champions, first and second-prize winners. High Model, a son of Golden Model 2d, was the grand champion at the Iowa State Fair in 1912. His dam is an Ohio Chief sow and there is no reason why he should not breed well. There will be eight sows bred to this grand young boar in the sale. Golden Model 31st is another son of Golden Model 2d that won grand championship at the Sioux City fair in 1912 and about eight sows in the sale are bred to him. If breeders could see the pigs sired by this young boar that Waltemeyer Bros. will show another year, they would have plenty of confidence in his ability to sire winners. Sensation Wonder was the third-prize under-year boar at the Iowa State Fair in 1912 and was purchased to use on Golden Model 2d gilts. His sire is I Am Protection Wonder by Crimson Wonder Again, while his dam is the noted brood sow, H. A.'s Queen. Sensation Wonder is one of the best prospects in the country for a senior yearling this coming year and at sight he impresses the careful observer as an impressive looking sire. A good sow bred to this grand young boar will be a money-making proposition in any herd. As to the sows in the sale, it would consume several pages of space to give the winnings of the animals to be sold, as well as the winnings of their ancestors. One of the most attractive propositions in the sale is the junior yearling sow sired by Golden Model 2d and out of an Ohio Chief dam shown in the junior yearling class in 1912, winning second at Des Moines and Huron, first at Hamline and first and grand championship at Sioux City. This is a wonderfully well-built sow, being very smooth and having an excellent set of feet and legs. She is bred to Chief Select, Wm. Reed's noted herd boar, for an early March litter. A more desirable sow will not be sold in the winter sales. The first-prize gilt at the Iowa State Fair in 1912 was a daughter of Golden Model 2d and she sells in the sale bred for a March litter to Chief Select. This gilt is an extraordinarily good one and will suit any breeder looking for the best to be had. The second and third-prize gilts at the Iowa State Fair will sell and they are bred to Golden Model 2d. The fourth-prize gilt is a daughter of Model Chief's Last, out of a Golden Model 2d sow, and bred to Golden Model 31st, the Sioux City champion. The senior yearling sow, that won fourth at Des Moines, championship at Hamline and Huron and first at Sioux City, is a daughter of Protection Col. and out of a Golden Model 2d dam. She sells bred to the Iowa grand champion, High Model. The other junior yearling sow this firm exhibited was a daughter of W. B.'s Model Chief and was good enough to win fourth at Huron and third at Sioux City. She is bred to High Model. The three under-year sows in their prize-winning herd this year are all cataloged. One that won second at Des Moines and Huron and third at Hamline is a daughter of Golden Model 2d and bred to Sensation Wonder. The one that was first at Huron and Sioux City and second at Hamline is a daughter of Model Chief's Last and bred to Golden Model 31st. The other is a Golden Model sow that won third at Des Moines and fourth at Sioux City and is bred to Sensation Wonder. There will be five Chief Select gilts in the sale, one by Advancer, three by Dusty Critic, one by Proud Col., all of which are bred to Golden Model 2d. Model Girl 5th is the dam of High Chief, the first-prize junior yearling boar at the Ohio State Fair in 1912, and she sells bred to the Iowa champion, High Model, for an early litter. There will be about twenty sows bred to the great sire, Golden Model 2d, and about fifteen extra good fall yearling sows and spring gilts sired by Golden Model 2d and bred to Sensation Wonder. There will be two extra good Model Chief 2d gilts that are litter sisters to the boar pig that won fourth at Des Moines, first at Hamline and Huron, and these gilts are bred to Golden Model 2d. The record of the produce of Golden Model 2d at the leading western state fairs during the past four years stands almost unequaled and to the student of the breeding of the winners at the state fairs, it is a well-known fact that most of them are descendants of prize winners. The man who buys a sow bred to Golden Model 2d is reasonably sure to raise a litter of pigs that with proper care will have an excellent chance to win some of the important prizes at the big fairs. This entire offering are descendants of boars and sows that have been winners at the leading state fairs and they are reasonably sure to reproduce their own kind. We cannot too strongly recommend this offering and urge every Duroc breeder who can possibly use a good sow to be present at the sale. Carlos C. Palmer will represent The Homestead at this sale. See page 47 and write for catalog, mentioning The Homestead.

Young Man Whats Your Job Worth?



That means, not how much money you earn now, but--

---is the work congenial?
---are you being developed?
---are you growing?

Will you be a Power or a Plodder at 40?

Well-trained railroad agents receive high salaries and achieve high positions—some become superintendents, general managers, presidents.

The Chicago Great Western Railroad Company

Has opened a railroad business college (*not* a correspondence school) at Dubuque and offers exceptional opportunities to a limited number of bright young men to enter its service as agents, operators or assistants. The cost of tuition is reasonable, and will be refunded after a year's service.

If you are interested in your own development—if you want to *grow*—write for booklet to

G. O. Perkins, Supt. Telegraph
Chicago Great Western Railroad
303 West Harrison St., Chicago.

Feb. 18, W. F. Davis, So. St. Joe, Mo.
Mar. 12, D. H. DeKalb, Dekalb, Iowa.

FIELD NOTES.

A recent note from Tweedt Bros., Corsica, S. D., advises us that they will hold a public sale of Duroc Jersey hogs on February 12th.

M. W. Vaughn, Marion, Iowa, has six yearling Chester White brood sows and thirty spring gilts bred for late March and April farow that he is offering for sale in his advertisement on page 50 of this issue.

Jesse Binford & Sons, Liscomb, Iowa, inform us that they have a few good Short-horn bulls for sale and would be pleased to have any Homestead readers in need of a bull visit them and see their stock. They are making very reasonable prices. See page 51.

P. J. Eggers, Denison, Iowa, makes a change in his advertisement which will be found on page 38. Mr. Eggers has for sale a number of high-class Percheron and Belgian stallions of desirable ages that are right every way. Write him for prices, or go and see his stock.

Robert Pritchard, Carroll, Neb., has some very high-class bred Duroc Jersey sows to sell at private sale this season and will be glad to quote prices on them to anyone who may be looking for stock of a high degree of merit. His advertisement appears on page 50 of this issue.

E. B. Hamilton & Sons, Garden Grove, Iowa, are offering home-bred registered Percheron stallions and mares and also standard-bred horses of both sexes for sale in the advertisement that appears on page 38 of this issue. They write that this stock is extra good and that they expect to price it well worth the money.

W. A. Bissonnett, Charles City, Iowa, is advertising a few big-type Poland China gilts on page 43. The spring gilts are weighing from 225 to 300 pounds and a fall gilt weighing near 400 pounds. They also have some last September and October pigs for sale. The price is very reasonable on this quality of stock.

L. L. Henningsen's Sons, Dike, Iowa, are offering ten Double Standard Polled Durham bulls ranging in age from ten to eighteen months. They are all red and good individuals. This herd has been established eighteen years and is producing the kind that please buyers. The prices asked for these bulls is reasonable. See page 38.

Frank L. Stream, Creston, Iowa, writes that he will have a new importation of Belgian and Percheron horses to arrive at his barns, February 7, 1913. Mr. Stream invites all his old customers and new ones, as well, to come and see this load of horses, as they will be the largest and heaviest he has ever imported. See advertisement on page 54.

"The colts I have for sale are a black, coming three years old, and a chestnut sorrel, coming two years old," writes F. Bowman, Eldora, Iowa. "They are both good individuals and nicely made and sound, and for Morgans will make horses with plenty of size. They will be priced very reasonable and those interested had better come and look them over." See advertisement on page 38.

In an advertisement on page 44 Anna E. Sharpe, administratrix, announces the closing-out sale of the Menzie Poland China herd. The herd is a good one, including three herd boars, a number of matured sows and thirty high-class gilts such as any breeder ought to be glad to own. The sale takes place February 4th at Hampton, Iowa. As it will be held in town, buyers may attend the sale without any loss of time. For particulars write to Anna E. Sharpe, administratrix, Hampton, Ia.

Harry Hurless, Ogden, Iowa, is offering some of his Chester White bred sows and gilts at private sale to those who want a practical type of producing females of this particular breed. He has been making some good sales alraedy, having sold seventeen bred gilts during the past two weeks. These sows are bred to good sires that are well bred and the prices are set at figures which make them good bargains. See page 50.

No doubt a large number of farmers are just now giving quite serious consideration to the question of building a new house in the spring. To those men the advertisement of the Gordon-Van Tine Co. on page 56 will be of interest as well as the road to savings in house construction. The company have on $1,000,000 worth of lumber and building materials and they make the statement that they will be able to save owners from $500 to $1,500 cash on a new house. They furnish everything: lumber, doors, windows, millwork, paint, hardware and roofing. Every prospective builder will serve his own interest well by procuring copies of the catalogs mentioned in the advertisement. Just fill out name and address in the coupon, put a check mark opposite the name of the catalog wanted and forward to Gordon-Van Tine Co., 4081 Case St., Davenport, Ia.

Bradley Bros., the well-known growers of strawberry plants at Makanda, Ill., will send free to any of our readers six plants of their famous Bradley variety. See their advertisement on page 16.

A feature of the Hapgood Plow Co. advertised on page 8 is the business of selling plows direct to farmers. The various other machines manufactured by this firm are described in a catalog, for which address Hapgood Plow Co., Box 810, Alton, Ill.

Lower prices and better quality are the principal points in favor of the Davenport gasoline engine which appears on page 10. In addition to the principal facts noted in the advertisement, there are arguments of intense interest to buyers given in engine catalog, which postal card addressed will secure. Write for it to the Davenport Engine Works, Dept. 4471, Davenport, Iowa.

Certainty seeds are sent out by the Iowa Seed Co. This company has been in continuous business for forty-eight years and the distribution of seeds made through it in that time has been immense in quantity as well as right in quality. At present there are fourteen departments engaged in seed growing, which utilize 8,500 acres of land. Farm, garden and flower seeds of every sort are described in the new, finely illustrated catalog, for which write to the Iowa Seed Co., Dept. D I, Des Moines, Iowa. See page 14.

The new Mankato incubator, announcements of which have appeared in recent issues of this paper, is a hatcher which, while it possesses all the merits of high-class machines, is sold at a minimum figure. The fifty-egg Mankato is quoted at $14.95, which is a remarkable price when the claims of the manufacturers are taken into consideration. Catalog giving complete description may be obtained by writing to the Mankato Incubator Co., Box No. 827, Mankato, Minn. See page 24 for advertisement.

J. H. Morf, Fayette, Iowa, informs us that he has a few good bred Duroc Jersey gilts left that will weigh 300 pounds each and are not loaded with fat. They have been fed a protein ration and have had plenty of exercise and getting the same care that Mr. Morf's brood sows are. Mr. Morf's customers write him as follows: "Received gilts O. K. and am well pleased. Think they are a fine pair. Am more than pleased with the gilt." Mr. Morf is giving excellent values in these gilts at the prices asked. There has been no cholera in his section of the state. See page 50 for advertisement.

It does not seem that it would be necessary to direct the attention of our readers to the advertisement of the Hercules stump puller which appears on page 28. Earlier issues of this paper have given most convincing testimonials, showing the value of the stump puller and its effectiveness. There are also many arguments that may be presented showing how the reclamation of land more than pays the cost of the Hercules in one year. All these facts, however, are fully set out in the stump puller book which may be obtained free by simply filling out the coupon in the advertisement and forwarding it to the Hercules Mfg. Co., 741 21st St., Centerville, Iowa.

W. J. Crow, Webb, Iowa, will hold a sale of Poland China brood sows in February that should be borne in mind by those who will be wanting some good sows of the breeding that has produced so many good herd headers now in service in some of the best herds in the middle West. His sale will be held on Friday, February 21st, at the farm near Webb, and he has this year an unusually thrifty lot of sows to put up. He has had to let the old herd boar, Big Surprise, go this year and will be able to offer only a few sows bred to him, but the other boar, Crow's S. Kind, is still doing good work in the herd and is a sire of well-proven worth. Remember the date and get sows bred to farrow early and at a season that will show that they are carrying pigs. It might be a good thing to get your name on the list for a catalog now, so you will be sure to receive one when they are ready to mail.

Hanks & Bishop, New London, Iowa, have an illustration in this issue of The Homestead of a part of their winning show herd of 1911. This firm has at the head of their noted herd of Duroc Jersey swine the great breeding boar, Model Wonder. The produce of Model Wonder has been the winners in their herd. In 1911 at the Iowa and Nebraska State Fair the produce of Model Wonder won twenty ribbons including seven firsts, three seconds and one champion, and the most important of the first was on produce of boar. In 1912 they came back to the same shows and won as many if not more ribbons as the previous year and won second on the get of Model Wonder. On February 6th these gentlemen, together with J. C. Droz, Fairfield, Iowa, will sell fifty head of bred sows, the tops from two of the good herds in the state. Mr. Droz will have a lot of top sows mated to his herd boar, Cherry King, a boar that has proven a sire of renown. There will be a few sows bred to Wonder's Model, a second-prize junior yearling at the Iowa State Fair, 1912, a hog bred and shown by Hanks & Bishop, and he has promise of being one of the great boars of the breed. There will be a number bred to Proud Col., third at Iowa in 1911 in the junior yearling class. They have mated to the noted sire, Model Wonder, the best bunch of gilts they have ever offered the public mated to this great sire. This sale will be held at Fairfield, Iowa, February 6th, at Gilbert's sale barn. See page 50 and write either consignor for catalog, mentioning The Homestead.

Osborn's Sow Sale, February 1st.

On Saturday, February 1st, O. E. Osborn, Weston, Iowa, sells a great string of Duroc Jersey bred sows, and his offering will be one of the best offerings sold during this week. Make it a point to be at the Osborn sale on February 1st.

Bargains in Belgians.

On page 54 Ed Boll, Jr., Scribner, Neb., is offering some splendid bargains in imported and home-bred stallions and mares ranging from yearlings up to matured horses. He is offering some prize-winning young stallions that are about as good as you will find anywhere and he is making prices on these where they will sell. He also offers some splendid mares for sale. If you want Belgians it will pay you to go and see his horses. When writing him kindly mention The Homestead.

Dr. Herr & Miller's Coming Sale.

Dr. Herr, who is well known in the Duroc business to Homestead readers has taken on a partner in the Duroc business. The doctor's immense practice as a physician keeps him so busy he felt his need for help in the business. In selecting S. J. Miller, Lima, Ohio, we feel sure he has a partner that will strengthen this firm. They will hold a bred sow sale February 19th. This is on Wednesday of the Northern Ohio Sale Circuit. They will offer several extra choice sows of the very richest of breeding bred to their noted sire of prize winners, Helen's Chief 63821. Watch the next issue of The Homestead for advertisement.

Shaw's Duroc Sale.

One of the important sales of Duroc Jerseys to be made this season is the sale that will be made by H. H. Shaw, Hebron, Neb., on February 11th. On this date Mr. Shaw is selling some of the best sows that will sell this season. He is putting in some sows that will be good enough for anyone, and they certainly are deserving of the attention of the breeders and others who appreciate the good hogs. Mr. Shaw is a breeder who has come before the people a great deal the past few years and we must say that we feel that his efforts in behalf of the Durocs have been far reaching. We feel that those who have the best interest of the breed at heart and that appreciate the service that Mr. Shaw has been to the breed sould turn out and help make this progressive stockman a good, fair sale. The offering warrants it and we believe it is coming to Mr. Shaw. The offering is all of good blood lines and as individuals they are a little better than the good offering put up by this gentleman a year ago. We would ask that you send for a catalog at once and when writing kindly mention this paper. See advertisement on page 41.

The Comer-Van Meter Bred Duroc Sow Sale.

On Thursday, February 13, 1913, R. L. Comer, Carlinville, Ill., and A. H. & W. H. Van Meter, Williamsville, Ill., will hold a combination Duroc bred sow sale at Pawnee, Ill., as per advertisement on page 53 of this issue. The sows are mostly bred to Col. I Am, first in class, senior champion and grand champion at Illinois State Fair, 1913, by B. & C.'s Col., dam by Crimson Wonder Again, and Dominator Col., first-prize junior yearling, Illinois State Fair, 1912, while others are bred to College Professer by The Professor; Illustrato., first-prize boar pig at Illinois State Fair, 1912. It is seldom the buying public gets an opportunity to buy sows bred to so many Illinois champions in one year or one sale. These boars represent the highest type of perfection in the Duroc world, as the Illinois State Fair is the grand reckoning place of the year's shows. The sows in the sale are a richly bred lot of matrons, too, and each and every one is a good, first-class individual. They are sired by Crimson Wonder III., B. & C.'s Col., McNeil's Model, Professor and other noted sires. Make every arrangement to attend this sale. If you cannot come send bids to H. E. Browning, representing The Homestead, or Colonels Reppert and Igleheart and assistants, auctioneers. Look up advertisement on page 53 of this issue and write for catalog.

Isaac's Big-Type Durocs.

On February 12th, at Red Oak, Iowa, J. D. Isaac will sell fifty head of his large-type Duroc Jersey sows, and he has once more a splendid offering to show the breeders. Mr. Isaac is one of the men who has held to the big-type Durocs and he has made a reputation along that line. For a number of years the Isaac big-type Durocs have been gaining favor with the public and this has given them encouragement to continue along their chosen line. In his forthcoming sale he will sell fifty. There are seven tried sows, eight fall yearlings and thirty spring gilts. The tried sows have been selected because of their individual merit and usefulness and are as good as he has in the herd. The fall yearlings are all sired by Crack A Jack, a big boar formerly used in the herd. The spring gilts are a grand good lot and they are sired by Jim's Mogul and Iowa King. This boar, Jim's Mogul, is a hog he selected from the Carey Cameron herd, and he was the largest pig seen in any of the fall sales last year. He has proven a most excellent breeder and the gilts sired by him are among the very best he has. All of the fall and the matured sows are bred to this boar and they will be good propositions to buy. The remainder of the gilts are bred to Valley King 3d, one of the largest and

toppiest boars in the Barker Bros. & Crowell sale last fall. Those of our readers who are wanting Duroc Jersey sows with plenty of size will be interested in the J. D. Isaac sale. Write him at once for catalog and mention The Homestead. See advertisement on page 44.

High-Grade Holstein Cows.

W. C. Kenyon, Elgin, Ill., advertises on page 23 that he has always on hand 150 to 200 head of good, high-grade Holstein cows and heifers, due to freshen at an early date, and he will sell them in lots to suit. Mr. Kenyon is easily accessible, his farm being situated two miles south of Elgin at Clintonville station, on the Aurora, Elgin and Chicago third-rail electric line, with the barns two minutes' walk from the car. Write him your wants.

Fesenmeyer's Last Call.

On February 6th Henry Fesenmeyer, Clarinda, Iowa, will sell a grand good offering of big-type Poland China brood sows bred to his celebrated herd boars, A Wonder and Big Joe, and those who want to get the choicest of big-type breeding cannot afford to overlook this sale. He is selling some excellent A Wonder sows in this sale and some great gilts by Big Joe bred to old A Wonder. In fact there are no better than he will offer in this sale. If you cannot get to this sale send a bid to our M. T. White, representing this paper, and it will be properly looked after on day of sale.

Hopley & Son's Stallions.

In a recent letter from Peter Hopley & Son, Lewis, Iowa, they say: "We have been having a very nice trade in Percherons and Shires and the outlook looks good to us. We sold ten mares last week, eight Shires and two Percherons, and we think the best yearling Shire stallion in America, The Champion Molasses Feed Co., Tarkio, Mo., bought the Shire mares and stallions for their farms at Tarkio, Mo., and the Percherons went to Dave Gelvin, Maitland, Mo. We also sold two stallions last week to old customers and we also sold a car load of stallions and mares to go to Utah. We have some splendid horses left, but you can just say to your readers that they will have to come soon if they want them." See advertisement on page 55.

Bob Ewing Buys Superba.

One day recently our old friend, Bob Ewing, New Hampshire, Ohio, decided to own Superba outright, so he journeyed to Lima, Ohio, and called on East Bros. and after much talk succeeded in getting a price on their half interest. So as Mr. Ewing already owned one-half he is owning the whole hog. While at the East farm he also bought ten of the choicest gilts on the East Farm and several of these are by Defender and most of them bred to Superba. This is a great big deal all the way around and places Bob Ewing right in fine shape for his big sale, Monday, February 17th. Watch for the advertisement in The Homestead next week.

The Season's Hereford Offering.

Warren T. McCray, Kentland, Ind., will offer seventy-six head of Hereford cattle at auction on February 26th that will comprise the strongest lot ever sent forward from this great breeding establishment and one of the best lots ever seen in any sale ring. Fifty-one females and twenty-five bulls are listed, comprising a collection of show and breeding cattle that, numbers considered, we doubt if any other breeder could duplicate. Eighteen sons and grandsons and twelve daughters of the champion, Perfection Fairfax, are cataloged, while many of the females are bred to this greatest of Hereford sires. Particulars for this notable offering will be given in late issues. File your application at once for the catalog with W. T. McCray, Kentland, Ind., and mention The Homestead when you write.

Kuhl's Closing-Out Sale.

One of the very attractive big-type Poland China sales that will be held this winter will be that of Herman P. Kuhl, Florence, Neb., on February 13th. It will be a closing-out sale and he will sell forty-five head, including his noted show and breeding boar, Big Tom, and his young boar, L's Quality. Big Tom, it will be remembered, was a first-prize boar at the Nebraska State Fair and he has proven himself a great breeding boar. His sons are heading many of our best herds today in the West and his daughters have also been sought after by our best breeders. We therefore say to those breeders who are going to want a tried herd boar, here will be one of the best propositions offered this year. The young boar, L.'s Quality, is the hog that Mr. Kuhl and Chas. Lonergan paid Tom Walker $250 for, and he is proving himself a good breeding boar. He is selling twelve fall sows and twenty spring gilts, all sired by Big Tom, and no one has any better. Most of the other sows will be bred to Big Tom and you can therefore realize that Mr. Kuhl is going to put up a splendid offering. Among his best sows is Tecumseh Belle 22d, a daughter of Miller's Happy Tecumseh, and she is one of the toppiest and best sows that will go through a Nebraska sale ring this winter. She is bred to Big Tom for an April litter. Other splendid sows that go in bred to Big Tom are Lady Hadley by Cavett's Big Hadley, Vest Pocket by Big Victor, two daughters of Cloverdale Hadley and a daughter of Fesenmeyer's old boar, Chieftain. Many of these herd sows and fall sows are outstanding good ones and his gilts are just as good as you will find anywhere. The sows that he will offer are bred to Big Tom, L.'s Quality and Big Omaha. Remember the Kuhl sale is a closing-out sale and there will be some great bargains offered. Write for his catalog and mention The Homestead. Bids sent to M. T. White, representing this paper, will be attended to on day of sale. See page 44.

Brook's Hampshire Sale.

C. A. Brook, Washington, Iowa, has one of the largest herds of registered Hampshire swine in the state and has decided to offer at public auction some of the best sows he has had on the farm. Mr. Brook has been an exhibitor at the leading state fairs and the International Stock Show for several years and was exceedingly fortunate in winning his share of the prizes at the recently International Stock Show. Joe 7743 was the first-prize junior yearling boar at that show and was a strong contender for championship honors. Many breeders at the ringside would have placed him above the boar that won championship. Nearly all the sows Mr. Brook is selling are bred to this great show boar. This boar is a son of Nissen's General Allen, the second-prize aged boar at Chicago this year. It will be seen that Joe is backed up by a line of prize winners which would justify the prediction that he will make a great sire. There will be a few gilts out of Silvia, the undefeated under-year sow of 1911, and those being bred to Joe should be attractive propositions to the best of breeders. Mr. Brook has a large herd and has only selected the very choicest animals for this offering in order to make it attractive to the best breeders. Practically all of his 1912 International prize-winning sows will sell in the sale. Few opportunities to secure these prize winners at your own price are offered the public during the course of a year. J. E. Wright has consigned a few extra good sows to this sale and they are bred to Silver Tip Lad, one of the best sons of the noted champion sow, Silvia. If interested in good Hampshires arrange to attend this sale and write for a catalog, mentioning The Homestead. Carlos C. Palmer will represent The Homestead at this sale. See page 48.

Penry's Col. Beabout Sale.

On Tuesday, February 11, 1913, W. P. Penry, Radnor, Ohio, will hold his annual bred sow sale at his sale pavilion at Radnor, as per his advertisement on page 39 of this issue. Twenty of these sows are bred to the noted boar, Col. Beabout, that he paid $730 for at Mr. Browning's record-breaking sale. Col. Beabout was second-prize senior yearling at the Illinois State Fair, 1911. He was sired by Defender, dam Proud Fancy. Other sows are bred to Defender, Superba, Cherry King, Highland King and others. They are sired by Superba, High Model, Defender, Hi King, H. & H.'s Crimson Wonder, Ed Orion, Orion Chief, Good E. Nuff Again, King's Col., Col. Gladness, Col. Jack, King of Col.'s Ideal, Premier Col. and others. The stuff is growthy and in the pink of condition and showing up well in pig. Ohio Duroc men should be present and work for Mr. Penry, for Mr. Penry works for you six days in the week, fifty-two weeks in the year, and has helped every Duroc man in the state and many in adjoining states. He has bought hogs of many of you and sold them for you in herds, droves and bunches. Why not on February 11th show this good man that you appreciate his work and at the same time buy a fine sow for yourself that will make you money? The breeding cannot be beaten and the offering is fine as silk. Everybody is invited and you will all sure be welcome. H. E. Browning will represent The Homestead and bids by mail or wire should be sent to him, in care of Mr. Penry. Colonels Iglehart and Irwin, auctioneers. For further particulars and catalog write W. P. Penry, Radnor, Ohio.

Johnson's Giant Polands at Auction.

A sale of big-type Poland Chinas that the writer thinks is of especial interest to stockmen of the central West is the sale to be made by the well-known stockman, Gilbert Johnson, Osceola, Neb. The sale will be on February 11th. Osceola is very easy of access just now, as there are two passenger trains daily each way and good connections can be made at David City and Central City from nearly all points. Mr. Johnson has been breeding Poland Chinas for a number of years and it is the best of his productions that will be offered for sale. The sale offering is especially strong in the blood of J.'s Jumbo by Wade's Jumbo and we wish to say that this boar has proven a wonderful breeder. The fall stuff, the yearling sows and a part of the spring gilts are by him and we think they are the sort of stuff to buy. The remainder of the spring gilts are nearly all by Mogul's Pride by Mogul's Prince. All the sows will be bred to Hather's Hadley 2d or Choice Orange. Hather's Hadley 2d is the boar that topped the W. J. Hather sale last spring and he is also the sire of Hadley Over, the first-prize and champion boar at the recent International Stock Show. Hather's Hadley 2d has proven his ability as a sire and it is only for the fact that Mr. Hather wished to keep a big lot of sows sired by him that he was offered for sale last spring. Choice Orange is by Big Orange and out of the great breeding sow, Ott's Choice. He is a boar that was rated very high by Mr. James and should certainly make good as a sire. The writer would like to see a good attendance at this sale and we believe the offering warrants it. Those who cannot attend will receive the best possible treatment and attention by sending all bids to Thos. A. Shattuck, who will represent this paper at the sale. Do not hesitate to send bids on these hogs and send them early. Mention The Homestead and send for catalog at once. Address Gilbert Johnson, Osceola, Neb. See page 39.

Cottingham's Immune Duroc Bred Sow Sale.

On page 53 of this issue will be found the advertisement of Wirt A. Cottingham, Trivoli, Ill. On Saturday, February 15, 1913, he will sell forty head of extra well-bred sows that were immuned last June by the state virus and serum treatment. His herd boars were also given the same treatment. The writer a few days ago looked over the offering and we wish to recommend it to Homestead readers as first class in breeding and individuality. The herd boars are Cherry Prince by Cherry Kind, second-prize male pig at the Illinois State Fair, 1911; Ariatol by Good E. Nuff Again, and Young Defender. Surely this breeding will suit any Duroc man or farmer. The names mentioned above are seals of genuine quality. The offering is a fine, well-bred, thrifty lot, showing up well in pig. They are carrying the blood of John's Ohio Chief, Top Col., Orion Chief, Ohio Chief, Good E. Nuff Again, Col. S., Echo Top King, Cherry King, Inventor and others. This will surely make a good offering of well-bred stuff for Homestead readers who care to take advantage of the opportunity. Don't forget the attraction of the sale is the big sow by Echo Top King and her produce. Remember the Harding & Son sale at Brimfield, Ill., February 11th. Parties will find free entertainment at the Mayer Hotel the night between these sales. Good railroad service on the Iowa Central or M. & St. L. railroads. H. E. Browning will represent The Homestead. Colonels Iglehart and Reppert, auctioneers. For further information address Wirt A. Cottingham, Trivoli, Ill.

Glissman's Holstein Sale.

Those of our readers who want to buy Holstein-Friesian cattle cannot afford to overlook the great dissolution sale of H. C. Glissman at South Omaha, Neb., on February 4th and 5th. There will be 125 head in the sale, including eighty head of registered cows and heifers and young bulls, together with forty-five head of high-grade milk cows. Some of the best registered Holstein cows and bulls that have ever been sold in the West will be offered in this sale and there will also be a grand lot of splendid milk cows and cows right at their calving. This Rock Brook herd has been one of the greatest Holstein-Friesian herds in the West and here will be one of the occasions of a lifetime to buy some of this great breed. When writing Mr. Glissman for a catalog kindly mention this paper and remember the dates will be February 4th and 5th at South Omaha, Neb. See page 45.

Trotter's Jack and Jennet Sale.

On Febrary 27th, at Mt. Ayr, Iowa, W. T. Trotter will make a public sale of thirty head of jacks and jennets and it will be one of the best offerings that has ever been sold in the state of Iowa. He will sell fifteen jacks that will run from two to six years old and he has some good ones. Among these will be Jumbo Lad, a jack that Bob Harriman says is one of the best jacks in Iowa and Missouri. Another good one is John S., a seven-year-old, and one of the greatest mule breeders that has ever been here in the West. A lot of other good ones will be in the sale, together with fifteen high-class jennets. Mr. Trotter is regarded as one of the very best jack breeders today in the West, and there will be no disappointments on the part of those who attend his sale. If you write him at once and mention The Homestead he will send you a catalog of his sale.

Ed Hickey Buys Big Buddy.

One of the best purchases that has been made in a big-type Poland China boar in a long while was recently made by Ed Hickey, Gretna, Neb., when he purchased of Wm. Keep, Atlantic, Iowa, the large yearling boar, Big Buddy. He is a hog that is a hog, and when it comes to the strictly large-type kind they are all going to have to take off their hats to him. Big Buddy weighed 800 pounds in his yearling form a while before Mr. Hickey got him, and if he don't tip the scales at 1,000 pounds when he gets his age we miss our guess. This boar is bred right and the breeders are all going to like him. He is a son of Big Pete, he by Long Wonder by Longfellow 7th. His dam is Miss Sioux 3d by Billy Dart by Billy Young, and he traces to Mouw and Miller breeding through all his lines. He is a breeding boar as well as a large one and he will make a reputation for Ed Hickey and the man who sold him.

Slepicka's Short-horn Cattle Sale.

One of the really good offerings of Short-horn cattle to be sold in Nebraska this winter are the ones to be sold by Chas. A. Slepicka, Tobias, Neb., on February 14th. Mr. Slepicka is selling many of the very best ones he owns, especially of the younger ones. An item of interest and one we do not wish overlooked is the fact that nearly every cow of breeding age is bred to the great young bull, Diamond Digger, a son of the champion, Diamond Goods. The writer knows that Mr. Slepicka made many trips to see different bulls and the writer also inspected a number of promising young bulls for him, but none quite filled the bill until Mr. Slepicka saw Diamond Digger. He spent no time in making the purchase and we must say that, in our opinion, he is one of the very choice young bulls of the country. We also think that a cow bred to him would be a mighty good investment and hope to see a nice crowd of buyers at this sale. Send for the catalog today. See advertisement on page 43.

Stevens' Duroc Jersey Announcement.

O. R. Stevens, Rippey, Iowa, announces in an advertisement on page 51 that his annual public sale of Duroc Jersey sows will be held Thursday, February 6th. In previous sales Mr. Stevens has always forwarded a consignment of Duroc Jerseys that were satisfactory to buyers. The character of the present offering is fully up to that of any previous lot. Forty-two head of sows and gilts have been cataloged. It may be judged that the blood lines are of the right sort when it is stated that they are the get of I Am Perfection Wonder, Proud Advance, Keep On 3d, Col. Gano, Col. Chief, Choice Goods 2d, Liberty Chief and P. H.'s Col. On the side of the dams they represent such prominent strains as that of Golden Model, Liberty Chief (one of the biggest and best sons of Ohio Chief), Proud Orion, Nebraska Belle's Ohio Chief, Graduate Col. and Masterpiece Chief. Nearly a dozen of the lot are daughters of Mr. Harding's great hog, Col. Gano, and many of this bunch are animals of extraordinary merit from all points of view. The consignment will have been bred to Big Wonder, Cedar Hill Chief or O. R.'s Choice Goods. Big Wonder is the grandson of the grand champion, Crimson Wonder Again on the side of the sire and of Kruger's Chief on the side of the dam. He represents most prominent state fair prize-winning strains and himself captured fourth place at

NEXT WEEK'S SALE PROGRAM

Monday, February 3	Duroc Jerseys, R. J. Harding, Carson, Iowa.
Tuesday, February 4	Duroc Jerseys, Wm. Retzlaff, Walton, Neb. Duroc Jerseys, C. E. Veak, Essex, Iowa. Poland Chinas, Albert Smith & Son, Superior, Neb. Duroc Jerseys, F. H. Dickey and H. S. Fain, Emmetsburg, Iowa. Holstein-Friesians, Henry C. Glissman, South Omaha, Neb. Jacks and Jennets, Platte County Jack Sales Co., J. B. Dillingham, Mgr., Platte City, Mo. Poland Chinas, W. H. Cooper, Hedrick, Iowa. Poland Chinas, W. H. Barr & Son, Red Oak, Iowa. Duroc Jerseys, D. K. O'Day, Burnside, Ill.
Wednesday, February 5	Duroc Jerseys, Grant Lynn, Spirit Lake, Iowa. Poland Chinas, J. M. Glasier, Algona, Iowa. Duroc Jerseys, H. S. Allen, Chariton, Iowa. Hampshires, C. A. Brook, Washington, Iowa. Kreischer, Mt. Vernon, Iowa. Duroc Jerseys, J. C. Droz, Fairfield, Iowa. Duroc Jerseys, Hanks & Bishop, Fairfield, Iowa.
Friday, February 7	Chester Whites, Chas. H. Murray, Friend, Neb. Duroc Jerseys, E. W. Davis, Glenwood Junction, Neb. Duroc Jerseys, J. Schmidt, Everly, Iowa. Poland Chinas, J. O. James, Braddyville, Iowa.
Saturday, February 8	Duroc Jerseys, Swan & Ellis, Indianola, Iowa. Poland Chinas, J. T. R. Nash, Minden, Neb.

Des Moines as the junior yearling. Cedar Hill Chief is the son of Liberty Chief. He also was at the Iowa State Fair. Catalogs giving full information may be obtained by addressing O. R. Stevens, Rippey, Iowa.

Murray's Immune Chester Whites at Auction—Last Call.

We are this week calling attention for the last time to the offering of immune Chester White sows that will be offered by Chas. H. Murray, Friend, Neb., on February 7th. This is an offering of Chester Whites that should appeal to all, for the stock is particularly high class and then they are immune and guaranteed to be as such. Blood lines of the very best, sows of great individual merit and in the finest possible condition is the sort that will be offered. Attend this sale if at all possible. You will find a class of hogs here that will certainly appeal to the lovers of the good ones. If you cannot be present bids may be sent to J. C. Price, representing this paper, and the same will be carefully taken care of for you. Careful selections and good values will be secured for you. Send bids early and send them to J. C. Price, in care of Mr. Murray at the above address.

Of Interest to Clydesdale Breeders.

W. J. Hather, Ord, Neb., one of the best known breeders and exhibitors of Clydesdale horses, will book a few more mares to be bred to the great International winner, Dictator. This is the sensational yearling showed in 1911 and he went back and did the trick over again in 1912. At Chicago, when thirty-one months old, he weighed 1,900 pounds. He is a horse that has only a few equals, and those of our readers who are within reasonable shipping distance of this great colt will find that it will pay them to send their good mares to this horse to breed. The terms are very liberal for this class of a horse and will be made known upon application. The writer considers him one of the best horses of this good breed that we ever saw. His ratings in the show ring confirm this opinion. Mention The Homestead when you write. Mr. Hather also has a few very choice Poland China boars for sale and twenty-five extra choice bred sows ready to ship. These hogs are the real "Hather kind" and that is all that need be said of them.

Crownover's Stallions.

Wm. Crownover, Hudson, Ia., writes. "My new importation is doing first class and are in fine shape for the trade. The two year olds are weighing 1,860 to 2,000 pounds and three year olds and over 1,900 to 2,250 pounds. I had then examined on January 2d and every horse passed sound, and I will furnish a qualified veterinarian's certificate to that effect. This means something to the prospective buyer. I selected these horses for their draft and wearing qualities. I think I can show as many big, flashy draft horses which have the best of feet, pasterns and joints and a good, heavy, clean, hard, flinty bone as anyone, and I will pay any man's expenses who visits my barns and can say he is disappointed in the size and quality of my horses. I have enjoyed a nice trade from old customers as well as new ones. I am going to make the lowest prices possible in order to reduce my herd. I have seventy-five head on hand and can give customers a fine selection in Percheron, Belgian or Shire stallions or mares. I will say to prospective buyers that it is to their own interest to inspect these horses before buying." See page 54 and when writing mention The Homestead.

Allen's Great Duroc Sale.

Those of our Duroc Jersey friends who want to get into the limelight cannot do better than attend the H. S. Allen sale at Chariton, Iowa, on February 5th. Forty head, selected as the best lot of sows he has in his great herd, go in, and twelve of these are bred to his world-renowned breeding boar, Crimson Wonder Again. Also eight daughters of the old hog are listed for the occasion and some of these have been leading prize winners at the fairs last fall. There will be daughters of the grand champion boar, Defender, in this sale; also about twenty granddaughters of old Ohio Chief. Besides these will be some good daughters of Chief Select, Valley King 2d, Crimson Chief Again, High Col., Advancer, Ohio Col., Proud Col. and others. Years come and years go, but the Crimson Wonders seem to go on forever. We remember well old Crimson Wonder, the founder of all the Crimson Wonder family. We first saw him as a pig at the home of our old friend, A. T. Cole, at Beatrice, Neb. The following fall we saw him at Lincoln, where he won first in his class, and were it not stolen from him he would have been the grand champion boar at that show. He was a wonderful boar and a great breeder and among the many great things he sired was Crimson Wonder I Am, also a champion boar at Des Moines, and he in turn was the sire of Crimson Wonder Again, a champion also at Des Moines, and one of the greatset breeding boars that has ever lived. A whole chapter might be written on the Crimson Wonder family, and were it not for this great strain the Duroc Jersey breed might not be where it is today. That the Crimson Wonders still occupy a most prominent positon in this great breed it is only necessary for us to point to the great line-up of leading herd boars, as well as the winnings of his sons and daughters and grandsons and granddaughters at the leading state fairs throughout the nation. As the old boar himself is getting quite old we cannot hope that he will go on indefinitely, and we therefore urge breeders to secure sows bred to him while they can. If you have not got the Allen catalog send for it at once. When writing for it kindly mention The Homestead. Bids sent to M. T. White, representing this paper, in care of Mr. Allen, will be properly attended to on day of sale. See page 48.

Podendorf's Holstein Sale.

On Thursday, February 6th, A. J. Podendorf will sell forty head of high-grade Holstein cows and heifers and some choice young bulls. Among the cows are some splendid milkers and others that will be due about sale time. It will be a splendid place to buy some good milk cows. The sale will follow the Glissman sale at South Omaha and parties can go direct to the Podendorf sale.

A Great Holstein Sire.

Elsewhere we present an illustration of the Holstein-Friesian bull, De Kol Hengerveld Burke, one of the herd bulls in use at the Idle Farm herd of T. H. Russell, Geneva, Ohio. This bull has proven himself one of the greatest of the present-day sires, having nearly thirty A. R. O. daughters, one of them, Urma Burke, with a record better than thirty-five pounds. He comes from strong ancestry, his sire, De Kol 2d's Butter Boy 3d, being one of the greatest sires the breed ever produced, 110 of his daughters having A. R. O. records and fifty-four of his sons being in the list. This is only one of the good sires Mr. Russell maintains in his herd, another one being Crown Prince Segis, a son of King Segis, a bull with more large record daughters than any other sire of his age. Mr. Russell's herd numbers close to 200 head, and there is no want in the Holstein line that he cannot supply in a satisfactory manner. Look up his advertisement on page 23 and write him your wants.

Two and three-year-old Mammoth jacks belonging to Al E. Smith, Lawrence, Kan. See field note.

Albert Smith & Son's Bred Sow Sale—Last Call.

This is the last opportunity we will have to call the attention of our readers to the Poland China sale of Albert Smith & Sons, at their farm northeast of Superior, Neb., Tuesday, February 4th. The offering will consist of forty-five head of tried sows, fall and spring gilts, and is one of merit throughout. The offering is bred strictly along big-type lines, the Nebraska type, as these breeders love to call it. The tried sows are among the tops of this herd and are listed as special attractions, while the gilts are a remarkably even bunch, heavy boned, strong backed and carry lots of size, in fact we doubt if a growthier bunch, age considered, will be sold this winter. Bred to the great sires at the head of this herd these sows should appeal to all lovers of the big, easy-feeding Poland. Remember the date and arrange to be present sale day. John C. Halderman will represent this paper at the sale. Send bids to him in care of Albert Smith & Sons.

J. O. James' Last Call.

On February 7th, J. O. James, Braddyville, Iowa, will make his annual sale of Poland China sows, and his will be one of the good offerings this year. Over twenty of the best sows that he will sell are daughters of Big Orange and he certainly has some good ones. Eighteen spring gilts by Big Orange will weigh right around 400 pounds and he never sold any better ones. Ten head of sows are bred to Big Orange and a great many to Olts' Big Orange and Big Sensation. Remember the sale will be held at Braddyville, Iowa, on Tuesday, February 7th, and it will be a good sale to attend. M. T. White will represent The Homestead at the sale.

A Big Short-horn Deal.

A consolidation of unusual magnitude was recently consummated in Montana whereby our old friend, Harry L. Summers, of Bozeman, but formerly of Malvern, Iowa, together with H. C. Childs and C. L. Anceny, formed one of the largest live stock companies in the West. Mr. Summers' noted College View farm near Bozeman was taken in and the Arceny and Childs ranches in Madison and Gallatin counties, comprising 3,000 acres, all go into the deal. The Summers herd, which is one of the best today in the West, was taken in, headed by the great bull, Master Avondale, and the new company has also secured the great bull, Cumberland Chief. We know the latter bull and will say that he is one of the greatest breeding bulls of the times. This bull was formerly owned by C. C. Norton, Corning, Iowa, and he is a son of the great sire, Cumberland's Last. When it comes to a breeding bull of strictly high-class cattle this bull, Cumberland Chief, will rank right up at the top. The new firm will handle Short-horn cattle, Percheron horses and Oxford sheep and will be under the active management of Mr. Summers.

Barnes' Sow Sale.

Another great offering of Duroc Jersey bred sows that will be sold this winter will be that of A. R. Barnes, at Petersburg, Neb., on February 13th. He is selling forty-five head and he is certainly selling some good ones. He is cataloging thirty yearlings and matured sows and these are sired by the old champion, Belle's Crimson Wonder; B. & L.'s Wonder, and Gold Dust Jim 2d. The gilts are sired by Belle's Crimson Wonder, Col. Chief, Golden Model 3d and B. & L. 2d. He is selling four litter sisters by B. & L.'s Wonder and out of Belle's Perfection that are outstanding good sows and they are bred to Col. Chief and Golden Model 3d. Two splendid Uneeda Crimson sows bred to B. & L.'s Wonder are among the very best things he will sell in the sale. Four good daughters of Belle's Crimson Wonder, out of a daughter of Proud Chief, the sow that sired his sensational Nebraska State Fair litter last fall and the sow that sired his first-prize pig a year ago, will be decided attractions in his sale. They are all bred to B. & L.'s Wonder and you will not find much better. There are two splendid daughters of Gold Dust Jim 2d in this sale and they are bred to Belle's Crimson Wonder and B. & L.'s Wonder. Among the great gilts he will offer are three by Belle's Crimson Wonder and out of that celebrated old brood sow, Peaches and Cream, and these are out of his good litter that he showed at the state fair last fall. The dam of these gilts is one of the greatest brood sows that ever lived and we know whereof we speak. She always raised the good ones. Two more good gilts out of Proud Chief's Pride will be decided attractions in his sale. These are sisters to the third and fourth-prize boars at the Nebraska State Fair in 1912. His offering throughout is an outstanding good one. Write for his catalog and make it a point to attend his sale. E. Z. Russell will represent The Homestead at this sale and will look after any and all bids sent him, in care of Mr. Barnes. See advertisement on page 41.

The Arney Angus Sale.

On February 27th, at his farm near Leon, Iowa, J. V. Arney will make a public sale of thirty-five or forty head of high-class Aberdeen Angus cattle. He is selling ten very choice Blackbirds, three Trojan Ericas and the remainder will be K. Prides and Pride of Aberdeens. Among these will be daughters of the great bull, Imp. Earl Eric of Ballindalloch, Imp. Black Jester of Ballindalloch, Imp. Proteros, Baltimore of Glendale and his own great breeding bull, Black Star 2d. It will be remembered that Mr. Arney's herd was a prominent factor in the leading shows the past few years and he got his share of the ribbons in competition with the greatest herds in the land. Many of these show winners will be included in the sale, together with ten or twelve young bulls. If you will only write Mr. Arney and ask for a catalog it will be sent as soon as it is off the press. Kindly mention The Homestead when doing so.

Veak's Great Duroc Sale.

On February 4th, at Essex, Iowa, C. E. Veak will sell a grand good offering of Duroc Jersey bred sows such as should command the attention of all those who want the very best. Among the best sows he will offer are a lot of daughters of his former herd boar, High Col., that was one of the best breeding boars used in western Iowa in recent years. Had old High Col. lived his allotted time he would have made a record that would have been hard to beat. As it was he lived long enough to show that he was one of the foremost of all the great breeding boars of his day. His daughters in Mr. Veak's last sale were eagerly sought after because of their size and finish, and he will again sell some good ones in this sale. Among the other good sows he will offer are daughters of the great boar, Select Chief, Cherry Prince, Proud Col. and Valley Chief 2d. He is now using three splendid boars in his herd, viz.: Cherry Prince, High Col. 2d and Crimson The Wonder. The sows will all be bred to this great trio and he has a great line up for the breeders in this sale. Write Mr. Veak for his catalog and kindly mention this paper. M. T. White will represent this paper at the sale and will properly care for any bids sent him in care of Mr. Veak. See page 49.

Reece Offers Hereford Bulls.

A Homestead representative recently had the pleasure of visiting P. W. Reece, Elmore, Minn., a man who has been doing some pioneering in the way of introducing pure-bred beef sires into his community. His farm is located near Ledyard, Iowa, where he owns 800 acres of elegant land which he has devoted to the raising of live stock. He now has over 100 head of pure-bred Hereford cattle and by selling his pure-bred bulls to the farmers in his community at rather low prices, he has induced them to raise a higher grade of steers which he buys as feeders and sends them to the market finished. Mr. Reece is a cattle man and takes good care of his live stock. At the present time he has a few bulls for sale at very reasonable prices. Among them is an extra good yearling bull, a thick, deep fellow that is priced at $150. There is also a good two-year-old bull in fine condition that $125 will buy. He has fourteen bull calves ranging in age from eight to twelve months and he is offering the choice of these at $100. We do not know where bulls as good as the ones Mr. Reece is offering can be bought for that money. Practically all of these bulls are sired by Royal Lynne by Masquerader by Lamplighter. If any of our readers are in need of a Hereford bull we would advise them to write Mr. Reece at once regarding these bulls, mentioning The Homestead, or better visit the farm. At the prices asked these bulls will soon be sold. See page 38.

Lefebure's Belgians.

Business is good, is the report we always get from Henry Lefebure, importer and breeder of Belgian draft horses at Fairfax, Iowa. He reports his horses all in the pink of condition, and the sort the American people are looking for. He reports sales since the International as follows: A roan Belgian to J. G. Scott, Shipley, Iowa; sorrel Belgian to Simon O'Donnell, Seneca, Ill.; bay Belgian to J. H. Rahilly, Dexter, Minn.; black Percheron to Herman Milke, Baraboo, Wis.; bay Belgian to Wm. Felten, Maquoketa, Iowa; sorrel Belgian to J. Serbosek, Fairfax, Iowa; gray Percheron to W. Ervin, Downey, Iowa; sorrel Belgian to J. H. Lacy, Harrison, Neb.; Belgian stallion and two mares to E. A. Kenoyer, Sidney, Mont.; black Percheron to Elmer Tow, Norway, Iowa; brown Belgian to J. Schneider, Elkader, Iowa; blue roan Belgian to H. C. Greengo, Glenville, Minn.; roan Belgian to Wilson & Reed, Morning Sun, Iowa. Besides sending us the above information he writes as follows: "So well was I prepared for the usual growth and increase in business that the above sales have not left me with an empty stall in my barns I have a large collection of the right sort for buyers to pick from. Men who are in need of a Belgian and who are ready to buy very seldom leave here without a good horse. I have a barn full of good strong colts coming three that weigh from 1,800 to 2,100 pounds, and the coming four to six year olds weigh from 1,900 to 2,400 pounds. I have no agents nor traveling salesmen; I sell all my horses myself at my farms and thereby save for my customers the agents' salaries, expenses and commis-

A FAIR AVERAGE OF THE JACKS IN G. C. ROAN'S SALE, LA PLATA, MO. SEE ADVERTISEMENT ON PAGE 42.

sions, all of which must be added to the price of the horse." Readers in need of a good Belgian or Percheron should write for Lefebure's illustrated horse catalog and arrange to visit his stables before buying. Please mention this paper when writing. See page 52.

Walker & Son's Poland China Sale.

Few breeders of the big Polands have been so successful in the selection of choice herd boars as have been Walker & Son, Alexandria, Neb., and their forthcoming sale of Poland China bred sows that will be made at Fairbury, Neb., on February 15th, is of special interest on account of this fact. It will be the only place to buy a sow bred to the great herd boar, Blue Valley. The writer is especially pleased with Blue Valley, as we have watched his growth from a pig, and he is fulfilling every expectation. The writer was convinced that there was a great outcome to Blue Valley when we saw him as a pig, but we scarcely thought that he would be quite as good as he is. Walker & Son consider him the best they ever bred and they have bred and raised a lot of the good ones. Blue Valley's Orange is the new boar and he was the top pig in the J. O. James October sale. He is a full brother to the pig that topped the August sale at the same farm and Mr. James is also using one of the same breeding. The writer would like to see a good lot of breeders at this sale, as we are convinced that they may attend this auction with profit to themselves and assist in keeping one of the greatest constructive breeders at his very best and encourage him to further effort. To those who wish a sow to produce a herd boar, or some new blood to supply high-class trade, we think this place will be especially interesting. Those unable to attend this sale will be treated the very best possible by sending a bid to J. C. Price, representing this paper. Get the catalog at once if interested and mention The Homestead when you write. See page 40 for advertisement.

Swan & Ellis' Sow Sale.

On Saturday, February 8th, at Indianola, Iowa, Swan & Ellis will make their first annual Duroc Jersey sow sale, and they will sell forty head that we take pleasure in recommending to our readers who want brood sows. While this firm are making their first annual sale they are not new to the business. They have been breeding Durocs for some time and they have been among the very best buyers the past two years. They have been very careful in their selections and have founded a first-class herd. In point of breeding you cannot find any better, as they have drawn from the greatest herds of the breed and they are selling sows that are daughters of some of the leading sires of the day. First and foremost is the fact that they will have thirty sows in this sale that are bred to their great herd boar, I Am A Crimson Wonder II., one of the very noted show and breeding boars of the present time. We cannot do better than to advise our friends to buy a sow or two bred to this splendid hog and then you will be right in line for better things in your herd, as he is a great breeding boar and has sired some of the best show winners. They are selling some splendid daughters of the old champion boar, Crimson Wonder Again, in this sale, and some splendid daughters of that remarkable boar, Col. Gano. You will also find there daughters of the Iowa State Fair champion boar, Freed's Col., Ohio Col., Chief's Protection and many other leading sires of the present time. The sale will be held right in town in a heated sale pavilion and everybody is invited. M. T. White will represent The Homestead at the sale and will care for any bids sent him, in care of Swan & Ellis. See advertisement on page 48.

Fowler's Great Poland China Sale.

One of the good herds of Poland Chinas of Nebraska, and first-class herd of Herefords also are owned by Morris Fowler, Arcadia, Neb. Mr. Fowler is what is known as a good stockman. He is a man who understands buying the right kind of breeding stock and is a good caretaker of the same. The writer would like to have every beginner in the stock business in Nebraska visit this farm and see the way that everything is cared for and, of course, Mr. Fowler is making money. He started only a few years ago with a rather meager start, but today he owns over a half section of land, has improved it with wells, fences and has recently added a new $1,000 barn to go with the other buildings that were put on a couple of years ago. Mr. Fowler has spent no time at college, or even high school, though he says that he wishes he had had the time to have done so; but, on the other hand, he has traveled much, has thoroughly posted himself on the live stock business and is absolutely making a success of the live stock and farming business. We cite this case in particular because we often hear that the business does not pay as well as it should. It does not pay at all unless conducted on a business basis, nor does any business, for that matter. But the fact is, that if a young breeder will start with the right material, handle his stock in a way that will develop them properly, the people are bound to come to that man for seed stock. Mr. Fowler has recently shipped Poland Chinas to Illinois, Iowa, Missouri, North Dakota and to many other points, even as far west as Utah. People have found out that he has the stuff. Mr. Fowler is advertising the fact and he has the goods to back up every statement. This is the place to buy seed stock right now. The sows that make up the sale offering for the February 12th sale are very choice. The writer has seen them and we pronounce them great propositions. Kindly notice the advertisement on page 40 of this issue and write for catalog at once and full information. Mention The Homestead when you write.

Wm. Retzlaff's Duroc Sale—Last Call.

The offering of Durocs that will be put up by Wm. Retzlaff, Bennet, Neb., on the 4th of February, is such that breeders and farmers who attend will find themselves well repaid for the trouble. Certainly many extra choice animals will be sent through the ring, and everything in the offering is of merit, as viewed from the standpoint of the pure bred. Mr. Retzlaff has been breeding good Durocs for a number of years, has been a lot of support to the business in the central West and we believe that it is due him that a good attendance be on hand for this sale. There are hogs good enough for anyone, and they certainly should be, for Mr. Retzlaff is a good caretaker, one who is never stinted for means to do with, and he has purchased the very tops from many of the best herds of the country. Do not overlook this sale. It will pay to be on hand. If unable to be present, you may send bids to J. C. Price, representing this paper, and the same will be well looked after.

STEVENS' BIG WONDER.

The above illustration represents the Duroc Jersey hog, Big Wonder, owned by O. R. Stevens, Rippey, Iowa. See field note on page 35.

Careful selections will be made, and you will be treated the best possible. The sale will be at farm, four miles southeast of Walton, six miles southwest of Eagle and seven miles north of Bennet. Free transportation from all points. The writer wishes to say again, do not overlook this sale.

Chapman's Duroc Bred Sow Sale.

On page 53 of this issue of The Homestead will be found the advertisement of J. W. Chapman, Woodburn, Ind. Mr. Chapman will sell thirty-five head of choice Duroc bred sows at his farm on February 10th. He has bought most of these sows at good, long prices. They are the tops of many sales and among them are several state fair prize winners. They are bred to a son of Volunteer, out of Lucy Superba. Superba Volunteer is his name. He was the writer's choice of this entire litter that brought $1,100 in Dr. Herr's sales last July and August. Lucy Superba, his dam, brought $525 in Smith & Rodgers' sale the other day. He is one of the best boar pigs the writer has seen all season. The other boar in service is by Defender and a good boar he is, too, and the man who buys a sow bred to him will never regret it. Thirty-five sows are offered in pig to these two boars. The star attraction is a Superba fall yearling dam, Helen's Duchess, that sold in the Browning sale at $675. Where can you get more Ohio Chief blood or a better sow individually? This sow should without doubt top the sale. Other good sows are sired by such noted boars as Defender, Superba, Volunteer, Instructor, B. & C.'s Col., Fancy Col., John's Ohio Chife, Harding's King of Cols., Model Wonder, Cherry King, Defender King, King's Col., Good E. Nuff Again, Col. Ohio Chief and Bold's Crimson Wonder. There are many great matrons in this lot with a flashy bunch of gilts. Come to the sale. If you cannot come send bids to H. E. Browning, representing The Homestead, Colonels Igleheart and Irwin, auctioneers. For catalog address J. W. Chapman, Woodburn, Ind.

Nash's Poland China Sale—Last Call.

In making the last call for the Poland China bred sow sale that will be made by J. T. R. Nash, Minden, Neb., on February 8th, we are calling attention to one of the really choice offerings of Polands to be sold this season. While the offering is mostly gilts, they are the real big, stretchy ones, the sort that make real brood sows. We believe they are as good a bunch of gilts as will be sold this season. They are practically all the get of the noted young boar, Gold Medal, and are bred to Long Jumbo, a son of Wade's Jumbo, and out of the great breeding sow, Long Wilkes by Imperial Wilkes. This is the sort of breeding that is making the Nebraska hogs famous, and right here is the real Nebraska kind. Breeders generally will find this sale a good place to be. They will find hogs that they can use with profit, and they will find that Mr. Nash is one of the most constructive breeders, as well as one of the best supports of the Poland China business in this section of the country. He is the sort of a breeder who is deserving of support and this offering is certainly deserving of attention. Those who are unable to attend may send bids to J. C. Price, representing The Homestead. The best possible selections will be made for you and you will be certain of getting good values. Address all letters to J. C. Price, in care of J. T. R. Nash, Minden, Neb.

The Droz-Hanks & Bishop Sale.

An important sale of Duroc Jersey bred sows will be held in Fairfield, Iowa, on February 6th. J. C. Droz, of that place, and Hanks & Bishop, New London, Iowa, will join forces in making a select offering of bred sows that should interest every good breeder of Duroc Jerseys. Mr. Droz will sell thirty head, twenty-nine of which will be bred to his noted sire, Cherry Chief. Cherry Chief is generally recognized as one of the great breeding boars of the present day, having sired some of the most noted boars of the breed, such as Chief Select, Cherry King, The Chief's Col. and others. In a sale like this will be an opportunity for breeders to secure a sow bred to Cherry Chief and raise a herd boar at a small expense. Breeders who have given this method a trial are very well pleased with this manner of getting a herd boar, as in the end it proves far cheaper and you can develop the pig to suit your own fancy. There will be eight yearling sows sired by The Professor, Golden Model 2d, Jack's Friend, Proud Col., Chief Protection, Col. Defender, all bred to Cherry Chief. There will be nine fall yearling sows sired by Proud Col. and a number of gilts sired by Proud Col., Advancer and Crimson Wonder I Am, all of which will be bred to Cherry Chief. One extra good Chief Select sow will be bred to Proud Col. Hanks & Bishop will sell twenty-five head, consisting of one good Model Chief sow, one fall yearling sow by Instructor, four gilts by Proud Col., four by Model Wonder, four by Proud Ohio Chief, one by Highland King and ten by Col. O., he by Proud Col., and these ten are all bred to Model Wonder, the great sire that has produced practically all of Hanks & Bishop's state fair winners at the Iowa and Nebraska State Fairs during the past five years. To the man who has attended the Iowa State Fair for the past five years it is not necessary to dwell on the merits of Model Wonder as a sire. The daughters of Model Wonder have won a number of firsts and have always been right at the top in the get of sire class and the produce of sow. Exhibitors always know that the progeny of Model Wonder has to be reckoned with when exhibited at the big shows. There will be nine sows bred to Wonder's Model, a son of Model Wonder that won second in the junior yearling class at the Iowa State Fair in 1912, and we might say here that this grand young boar had many friends for higher honors. This excellent young boar has as much size as can be found in a Duroc and has quality with it. There will be six sows bred to Proud Col., the great son of Proud Col. that has proven such a successful sire of sows. See page 39 and write for catalog, mentioning The Homestead. Carlos C. Palmer will represent The Homestead.

Of the forty sows that go in Orville O. Jones' Poland China sow sale for February 21st, nearly all are either sired by or bred to the above boar. He is one of the great boars of Nebraska. Mr. Jones' address is York, Neb. Watch for further announcements.

Iams' Stallions and Mares.

Frank Iams, the well-known horseman of St Paul, Neb., has the following to say regarding his stallions and mares: "Mr stallion buyer: Iams' 1912 importation of "Percherons and Belgians" are "Iams' best boy." They need no "state stallion law" to make them sound. They are all sound "bell ringers." Iams' peaches and cream stallions and mares are "rosy ripe"—in the pink of condition, and all must positively be sold. Get onto Iams' money-saving game. Buy stallions and mares today. Get stallions ready for spring business, Ikey boy. Be the early bird—they get the business and choice of Iams' topnotchers. Leave your happy home—visit the peaches and cream stallion man and save $1,000. Every day is bargain day—a horse show day—and a day of profit and pleasure at Iams' stallion and mare emporium—and largest in the United States at St. Paul, Neb. You will positively see here more imported stallions and mares—topnotchers—medal winners—ribbon grabbers, and every-day business horses—than at any horse plant in the United States, and double all others in Nebraska. Iams backs up his ads and catalog with a $500 bonus (no others do this). He gives five of the best banks in Nebraska for reference. Iams' 100 kings and queens of Percherons and Belgians are all topnotchers—the best bunch of big-boned, big drafters in the United States, and in the pink of condition. Iams is a big fly in the ointment in the horse business. He sets the pace for all competitors. Iams leads the procession, Ikey boy. Buy an imported stallion and two mares of Iams, the horseman who does things. Get into Iams' band wagon, don't be sidetracked by any hammer knockers. Ikey boy, waltz me around once again and land me at Iams' four importing barns and box office—filled to the roof with big, black boys and girls at bargain prices. Iams is the only horseman who really has the goods as advertised. Nineteen thirteen promises to be the most prosperous year in history. Mr. Democrat, "come on down town." All the world knows Iams, the big horseman. He has a loving feeling for horse buyers. He sold sixty imported stallions and mares to Iowa boys in 1912 and 100 topnotchers to the boys with brains in other states. Iams sells $4,000 imported stallions at $1,000 and $1,400 (some higher); imported mares in foal, 1,700 to 2,500 pounds, at $700 to $1,000; many medal winners. Iams sells the wide-as-a-wagon kind that don't need to be peddled or put on the auction block to catch suckers. Iams is a horseman in a class by himself—he is selling more horses yearly. Ikey boy, don't be the lobster; be the wise guy after all. Try Iams, the peaches and cream stallion man. He is the largest individual importer and breeder of Percherons and Belgians in the United States. Iams has a warm spot in his heart for all stallion buyers. He saved $300,000 to stallion buyers in 1912 by selling direct to the people, saving all middlemen's profits. Iams is an expert horseman. He knows the topnotchers and delights in selling first-class stallions at less money than any competitors. He is pushin' and a-shovin' high prices off the Christmas tree. He is Johnny on the spot. He is selling more stallions than any ten men in the United States. He knows the tricks of the slick stallion salesmen who are pulling the wool over the eyes of the honest farmers and selling them a $1,200 stallion for $3,000. Ikey, form your own stallion company. Visit Iams' town of barns filled to the roof with big, black boys—"Iams' kind. His 100 stallions and mares, two to six years old, weight 1,700 to 2,500 pounds, 86 per cent blacks, 50 per cent ton horses, are a horse show better than the International. Iams' 1912 horse catalog is an eye opener, a bunch of gold, the book of books to stallion and mare buyers. It is full of truths, facts, business propositions, and eighty illustrations of the best and largest imported stallions and mares in the United States. True to life, the wide-as-a-wagon drafters—the real peaches and cream stallions. It shows the tricks of stallion peddlers and auction block salesmen. It is the finest, most elaborate and original up-to-date book in the world. Iams' thirty years of successful business, importing and selling stallions, makes him a safe man to do business with. He sells stallions on honor. A boy or a lady can buy as cheap as a man and get a better horse of Iams, the square-deal horseman. If you visit him and don't find every statement in his advertisement or catalog as represented, you can get the $500 that he hangs up. Iams guarantees to sell you a better stallion at $1,000 and $1,400 (few higher) than are being sold to farmers' stock companies at $2,500 to $4,000, with 60 per cent breeding guarantee, with freight and fare paid by Iams. He can furnish buyers $1,500 insurance. You say, "Why can Iams sell better stallions at half the price of others?" Iams buys and sells every stallion himself. He buys stallions by special train load. He speaks the languages, saving 20 per cent. He is not in the stallion trust, saving you $300. He pays no slick salesman $100 to $1,000 to sell you a fourth-rate stallion. He has no two to ten partners to share profits with. He pays spot cash for his stallions. He sells stallions by hot advertising and having the goods to make every statement good. Iams sells stallions so good that they do not need a slick peddler or the auction block to sell them. Iams

will save you $1,000 in commissions and middlemen's profits. Papa, dear, buy me a pair of imported mares of Iams. They will raise me colts at six months old that will sell for $500, and be good for twenty years. Iams has the kind that lay these golden eggs. Don't let one of these auction men hand you a lemon with one of these so-called American full bloods with questionable breeding. Iams' selling clothes fit all buyers. Write for Iams' million-dollar horse catalog. Iams' guarantee is backed by a half million dollars. See the illustration on this page.

Golden Model 2d Dead.

One of the greatest losses to the Duroc Jersey breed in recent years was the death of Golden Model 2d, which occurred last week. It means a great loss to Waltemeyer Bros., Melbourne, Iowa, in whose herd he has done service for several years and sired 250 state fair prize winners for them during that time. Golden Model 2d has a record unequaled as a sire of state fair prize winners and on February 11th will be the last opportunity to purchase a sow bred to this noted old hero. It is one of the great opportunities in recent years to get a sow that will raise a show litter by Golden Model 2d. See Waltemeyer Bros.' page advertisement on page 47. Write them for a catalog, mentioning The Homestead.

The Phelps & Case Horse Sale—Last Call.

Without question one of the greatest lots of pure-bred Percherons that are to be sold in Nebraska this season is the offering that will be put up L. M. Phelps, Trumbull, Neb., and D. D. Case, Giltner, Neb., the sale to be in Hastings, Neb., on February 5th. These gentlemen have selected Hastings for the sale for the reason that they are only a short distance from this point and that the railroad and hotel facilities are of the best. They will reserve no stock on the farms that the buyer might wish to see, for there will be none left. This is a complete dispersion of both of these studs. These gentlemen who are breeding these horses are of the very highest type of horsemen. They are men who have grown these horses under the very best conditions, have grown them as a part of their farming business and have used them for the operating power for their farms. There is nothing highly artificial about these horses, nothing that will hinder them doing well for the new buyer. They have been grown under the very best farm conditions, as we have just said, and by that we mean that they have had an abundance of rough feed, plenty of shelter from the storms in the way of windbreaks, but very little stabling. All of these horses of working age are well broken to work, have been worked in a good, sensible manner and certainly should be much better from the standpoint of the breeder who keeps only a small stud than the highly fed, little-worked horses that are offered by a few dealers. The writer has every confidence in the owners of these horses as horsemen. We believe that they have the right conception of the business and we feel certain that those who attend this sale on February 5th will be pleased with the horses that will be offered. Be on hand early and look the offering over carefully. Hastings is on the main line (Lincoln to Denver) of the Burlington, also the Aurora to Kearney branch of the same, and on the main line of the St. Joe & Grand Island railroad. Ample hotel accommodations.

Lonergan's Sow Sale.

On February 12th, D. C. Lonergan, Florence, Neb., will make his annual Poland China brood sow sale, and he once again puts up a splendid offering. Twenty fall sows, twenty tried sows and twenty spring gilts make up his list for this occasion and it is one of the good offerings of the season. These sows are sired by Big Victor, I Am Big Too, Big Tom, L.'s Quality and other noted boars, and they are bred to Big Victor, Guy's Price Last, Big Bob, L.'s Quality and King Giant. Among some of his best sows is May by Centennial, the dam of Futurity Jack, and she goes in bred to Big Victor; Victor Goods by Big Victor and Olin's Choice goes in bred to L.'s Quality; Sensation by Big Victor, the choice of that celebrated fall litter he sold in his sale a year ago, is bred to L.'s Quality; Lakeside Belle, a spring yearling by Lakeside Wonder, one of the greatest young boars seen in Iowa in recent years, goes in bred to Big Victor. He won't offer any better propositions than this sow. There are several other good tried sows in his offering. His fall sows are sired by Big Victor and I Am Big Too and his spring gilts by the same two boars and L.'s Quality. The Lonergan catalog is full of good things and you can depend on seeing a splendid offering in the sale. If you are a lover of the big kind and those that have the quality to go with it you should write for his catalog at once and then go to his sale. Kindly mention The Homestead when writing for it. M. T. White will represent The Homestead at the sale. See page 44.

W. H. Cooper's Poland China Sale.

W. H. Cooper, Hedrick, Iowa, has one of the good herds of big-type Poland Chinas to be found in the corn belt. Breeders who have had the opportunity to inspect the herd of sows owned by Mr. Cooper, as well as the herd boars he has been using, have always been loud in their praise of the type of hogs found. Mr. Cooper will hold his annual sale at East Side Farm adjoining Hedrick on February 4th. There will be a number of sows sired by the noted two-year-old boar, Big Bone 2d, Chief I. X. L. 2d and Chief Jumbo, the great boar bred by John Miller. Mr. Cooper will have one of the best offerings of gilts to be found in any sale. They will be big, smooth and have plenty of bone and some of them will be weighing 400 pounds by sale day. The gilts are sired by Big Bone 2d, Chief Ideal, Big Chief 2d, Mammoth Jumbo and others. The individuality and the blood lines of this offering entitle it to the consideration of the very best breeders in the country. The most popular families are represented in the breeding and the individuality will speak for itself on sale day. It is just the kind of hogs Mr. Cooper is raising that has in the past and will continue in the future to make the Poland China a popular hog. Mr. Cooper's sales are not decided on only a short time before the sale is held, but they are regular occurrences, and after one sale is held, preparations begin for the next sale. It has been Mr. Cooper's ambition to be able to offer the public better hogs in each succeeding sale and when breeders see the good sows in this coming sale we believe they will say he has succeeded in putting up the best lot of sows he has ever sold. Carlos C. Palmer will represent The Homestead at this sale. See page 43 and write for a catalog, mentioning The Homestead.

Barker's Lyon Chief and The Futurity.

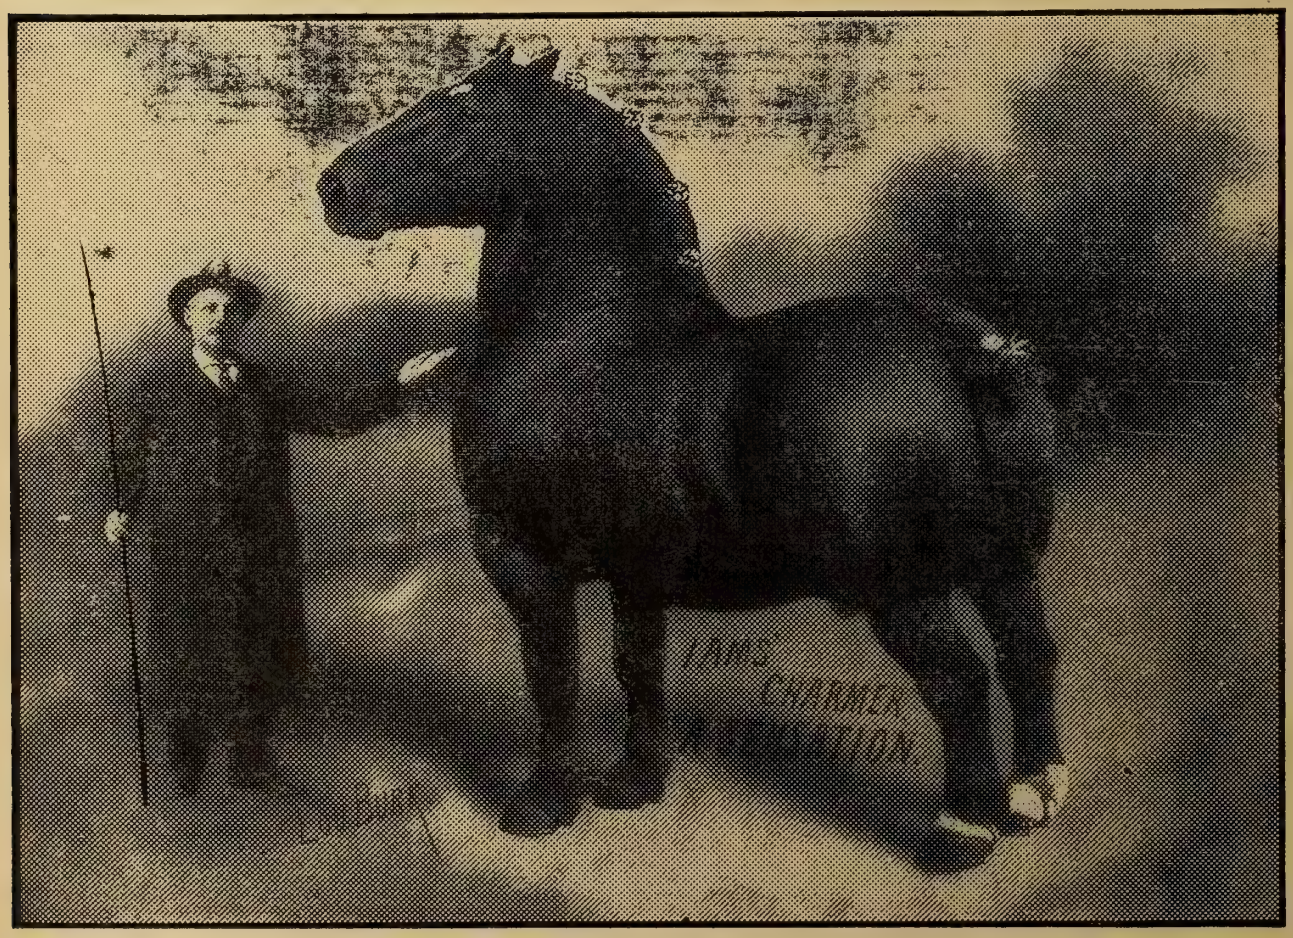
The above combination lends much attraction to the sale of Poland China bred sows held at Doon, Iowa, Thursday, February 13th. Fifty head of sows are listed for this sale and they rank rightly among the very leaders of this winter's sales. Several factors go to make this offering of high degree. One is the boar, Lyon Chief, which has proved to be an exceptionally good breeder of a useful type. Another is Mr. Barker himself, who not only is a good judge of practical stock, showing this in the selections for his breeding herds, but works hard to give the hogs in his charge a chance to develop the good qualities inherent in them. Then the facts that Mr. Barker's hogs have delivered the goods for his customers so they come back for more, also in winning enviable records in show, indicate the excellence of the herd from which this offering is taken. The fifty head include ten matured young sows, fifteen fall gilts by Great Expansion by Dorr's Expansion and twenty-five spring gilts by Lyon Chief and Mondamin Master. Among the gilts are the Iowa futurity winners and the first-prize gilt at Minnesota. There are also two litter mates to the first-prize boar pig at Des Moines last fall. One of the objects in the building of this herd is to produce big, stretchy hogs that feed out well and are easy to keep. Mr. Barker has had good opportunity to compare his breeding with stock of other lines and the largest sows ever seen in his herd were bred by him. But in securing size Mr. Barker has not sacrificed quick-feeding and early maturing qualities. The sows are bred to Lyon Chief, Lakewood Longfellow 2d, a big, stretchy boar and a sire of good selling stock, and Expanso, the first pick of the Dorr herd this fall, sired by Expander, dam Lady Wonder by A Wonder 107353, the Fesenmeyer boar. Mr. Barker's entire herd is entered for the futurity and as many litters as may be desired may be kept for this purpose by those who are looking towards the fall shows next season. The futurity litter of gilts are out of Gentle Jessie, a great producing brood sow. Her pigs have either won prizes themselves or sired winners at the Iowa, Minnesota and South Dakota fairs. She is the dam of Mondamin Master, the sire of a litter of great pigs, out of Mable's Choice 2d, the dam of the first-prize aged boar at Des Moines. She is certainly a great brood sow and reproduces herself in her offspring. The Futurity gilts are bred to Expanso and Mable's Master from the litter above noted and full brother to Mable's Giant, first-prize pig at Des Moines. As a prospect for good herd material we would like to call attention to the eight fall boar pigs and two gilts which will be sold at the sale. They are all good ones and are especially fine types of pigs. This whole offering ranks high. The bunch of fall gilts are very even, big backs, long, deep, full hams and on good bone and feet. The spring gilts averaged 325 pounds Christmas day and you may expect some 400-pound gilts sale day. Ray L. Gribben, Homestead representative, will attend the sale and will look after your interests on mail and wire bids to your satisfaction. Address E. S. Barker, Doon, Iowa, and kindly mention The Homestead. See page 42.

Theobold's Sale of Durocs.

The writer recently visited the home of J. C. Theobold, Ohiowa, Neb., and spent a little time in looking over the bunch of Duroc Jersey sows that will go in the sale that will be made by this good stockman on February 12th. We want to say that we saw some very high-class stuff on the place, and most of it goes in this sale. There are few breeders who have made the progress in the Duroc business in the same length of time that Mr. Theobold has made. The reason is a very simple one, however, as he bought the very best that he could get, regardless of the price. He purchased a couple of the very best known brood sows that were for sale in Iowa and got them mated to good boars. He has much of the stuff on the farm today and they are sure classy. He also bought some of the top stuff of the H. Smith & Sons herd at Tobias, Neb., and they, too, have done well. We feel safe in saying that the offering that will be put up by Mr. Theobold is the sort that will appeal to those looking for the real good ones, and we doubt if there will be a half dozen better offerings sold anywhere in the country this season. This sale is the second of a circuit, following the sale of H. H. Shaw, Hebron, Neb., and coming the day ahead of the sale of H. H. Koenig, DeWitt, Neb. These three herds are all good ones right now and the men who are building them are the sort of men to keep in mind, for they are progressive. They have not all followed the same line of building their herds, but they have thus far gotten much the same results. Mention this paper and send for catalog of this sale at once. See page 44.

Messenger's Hampshires.

Clayton Messenger, Keswick, Iowa, is one of the best-known breeders of Hampshire swine in the state. The winnings of his herd at the Iowa State Fair during the past few years have entitled him to a place in the front rank of Hampshire breeders. At the head of his herd is the undefeated grand champion, Messenger Boy, a boar that was exhibited at all the leading western fairs in 1911-12 and never met defeat. At some fairs he has been shown against all breeds and has always won over his competitors. Messenger Boy has been said by many breeders who are competent to know, among them such men as A. L. Goodenough, Morrison, Ill., to be the best Hampshire boar they have ever seen. The writer cannot recall having seen a boar with as good a set of feet and legs as has Messenger Boy. He has all the other good qualifications necessary to the makeup of a good boar. Better still, his record as a sire has just begun. Mr. Messenger will show a number of his sons and daughters at the leading state fairs next year and we predict that they will be strong competitors for first honors in their re-



Iams and a Paris winner, and second at Nogent le Retrou and Chartres, 1911, three largest French horse shows. It took the $10,000 Percheron to place this horse second place, two largest Percheron shows in France. Weight 2,300 pounds.

TOO LATE TO CLASSIFY.

HAMPSHIRE SOWS BRED TO MESSENGER BOY

THE undefeated GRAND CHAMPION BOAR of 1911 and 1912. I have a few good yearling sows bred to MESSENGER BOY, and a few to Capt. Jack's Model by Capt. Jack. Write soon if you want one and mention Homestead.
CLAYTON MESSENGER, - - - KESWICK, IOWA.

Hereford Bulls

I HAVE a good thick yearling at $150. A good 2-year-old at $125. I will take $100 for the choice of my bull calves, 8 to 12 months old, and they are good ones. Lamplighter, Karl of Shadeland and Beau Brummel breeding. Write or visit at once mentioning Homestead. Farm near Ledyard, Iowa.
P. W. REECE, R. 3, ELLSMORE, MINN.

BREEDER OF PERCHERONS AND BELGIANS

I HAVE now for sale a number of stallions ranging in age from three to seven years. Some are home bred and others are imported. They weigh from 1,900 to 2,300 pounds. Prospective buyers are invited to make a personal inspection of these horses. Terms reasonable. I have one three years old and weighing 2,400 pounds.
P. J. EGGERS - Denison, Iowa.

FOR SALE

HOME-BRED registered Percheron stallions and mares. Also standard bred, both sexes.
E. P. HAMILTON & SONS,
Garden Grove, Decatur county, Iowa, R. F. D. 2.
23 miles southwest of Chariton,

D. S. POLLED DURHAMS

10 BULLS, 10 to 18 months old, all red, good individuals. Herd established 18 years. Prices reasonable. Write what you are in need of. Farm within town corporation. Address
L. L. HENNINGSEN'S SONS, Dike, Iowa.

KEAN'S DUROCS have length, color, bone and breeding. Bred gilts and yearlings. A few good ones left for April farrow. Priced worth the money. Frank Kean, Mt. Pleasant, Iowa.

FOR SALE A pair of registered Morgan stallion colts coming 2 and 3 years old. For description and price write F. Bowman, Eldora, Ia.

spective classes. At the present time Mr. Messenger has a few yearling sows bred to Messenger Boy for March and April litters that he will price worth the money. A few sows are also bred to Capt. Jack's Model, a son of Capt. Jack. A Homestead representative recently visited Mr. Messenger's herd and we cannot recall having seen a better lot of sows than we found here. Mr. Messenger expects to raise over 100 pigs by Messenger Boy another year, as he has had such an urgent demand for the get of this great boar. See page 38 and write Mr. Messenger your wants, mentioning The Homestead.

Davis' Duroc Dispersion.

We want to call the attention of our readers to the important dispersion sale of Duroc Jerseys to be held by E. W. Davis, Glenwood, Mo., on February 7th. This sale will afford the Duroc Jersey breeder an opportunity to get grand champion blood galore. Model Queen, the noted Nebraska and Kansas champion sow of 1910; Chief's Maid's the Iowa grand champion sow of 1912, and Ohio Col., the grand champion boar at the Kansas State Fair in 1910, will all sell in this sale. Ohio Queen is another great prize-winning daughter of Ohio Chief that should prove an attraction. Each of the three sows above mentioned have raised fall litters and are in the most useful conditon for their future usefulness. A number of fall yearling daughters of Model Queen were prize winners at the state fairs this year and will be sold, as well as the fall litters of the three sows mentioned above, and among them are some of as good fall pigs as can be found. There will be plenty of material among these pigs for under-year show prospects another year. In this sale are daughters of Model Chief, Chief Select, Prince of Cols., Ohio Col., Blue Ribbon Chief, Valley King Again, Model Wonder, Proud Ohio Chief, Proud Col., Golden Model, King of Cols. and many others. The noted boar, Ohio Col., is one of the good herd boar propositions to be offered for sale either publicly or privately this year. Sons and daughters have been prize winners and he is backed by the best blood lines to be found. He will sell to the highest bidder on sale day. Successor is a yearling son of Advancer No. 1, his dam being by Top Notcher Chief. A number of the sows in the sale are bred to Successor and he will also be sold. He will be a good proposition for anyone wanting a herd boar. Write for a catalog, mentioning this paper. Carlos C. Palmer will represent this paper at the sale.

Henry Dorr Sells Polands at Marcus, Iowa, Tuesday, February 11th.

Henry Dorr, Remsen, Iowa (sale at Marcus), sells sixty head of bred Poland China sows of the Dorr type in his sale this year on the date given above. This is his fifteenth annual sale and his best. It is an inspiration to any lover of good hogs and enthusiast in the principles of breeding to see the line-up of both his fall and spring gilts. Among them are some of the most popular winners of this year. In addition to having bred winners in their own herd, Mr. Dorr's stock in other hands has shown the same prize-winning qualities, and some of the best shows made last fall were of Dorr breeding. A further fact that shows the quality of breeding at this place is that there is not a sow going in the catalog that is not good enough for its breeder to keep in his own herd. Mr. Dorr's idea in selecting stock for his herd is not to boost any line of breeding in particular, but he does go after the good hogs, wherever they may be. He doesn't claim all the good hogs in the country, either, but he does have right on his farm nothing but that kind of hogs. Breeders are welcome to compare them with the best. These sows are big, too, they have good stretch, bone and feet and their descriptions in other respects may be easily surmised when it is remembered that the three prize-winning fall gilts at the Sioux City fair are included in the sale offering and that the rest of the bunch are of the same type. In fact, there is one fall gilt which was not shown this year at all that is the equal of the ribbon wearers and fully their equal, too. The thirty fall gilts are by Dorr's Expansion and twenty more are bred to him. The best breeding boar he has ever owned is the way he expresses it. A look at the uniformity of the lot got by this boar is convincing proof of his breeding powers. The spring gilts are by Big Defender, a first-prize pig at Sioux City and sold late last summer to go to one of the most prominent breeders in Illinois and sold at a good, fat price. Others are by the winning Expander, including the gilts which took prizes this fall. Expander was runner-up to the great 800-pound yearling boar, Blue Valley Chief, and there are in this sale three gilts by the latter boar. Now, if that isn't some regal array to put in a sale, there never was one. Then look at the winning boars they have been bred to: Dorr's Expansion, Expander, Big Monarch by Golddust Hadley and Big Tecumseh by Blue Valley Chief. Lest it be feared that this is top heavy with prizes, it should be stated that in addition to sending out stuff which wins at the fairs, Mr. Dorr's trade among farmers who raise only market hogs has been satisfying in every way; his stock makes good money for that purpose. There is an excellent reason, too. It is backed up by a line of ancestry which is uniform in type. There are no mixed-up outcrosses and they breed as they are expected to. Ray L. Gribben, Homestead representative, will attend the sale. Mail and wire bids sent him will be used honorably and to your advantage. Address, mentioning The Homestead, and catalogs will be sent immediately, Henry Dorr & Sons, Remsen, Iowa; railroad station, Marcus, Iowa. See page 42.

W. H. Barr's Sow Sale.

On Tuesday, February 4th, W. H. Barr & Son will sell a grand good offering of forty head of Poland China bred sows in the new heated sale pavilion at Red Oak, Iowa. Some of the sows they are selling are exceptionally choice, among which are Long Tecumseh 88th, one of the best sows to be sold this winter, two years old October 10th, a big, handsome animal with quality, bred to Pawnee Sensation. Sensation Bell is a March 20th gilt, black as a crow and as sleek as an eel and Mr. Barr had some very tempting offers for her, but he has turned them down; but she goes in this sale as one of the attractions. She will weigh very heavy and has quality and finish to please all. Four extra fall gilts by B.'s Mastodon

WIRT A. COTTINGHAM,

Trivoli, Ill., whose advertisement of a Duroc bred sow sale on February 15, 1913, appears on page 53 of this issue.

out of Lady Prospect that will be just as good as any breeder will sell. Their dam is a litter sister to Long Tecumseh that is included in the offering. Two April gilts that are sisters to Nos. 10 and 11 in the catalog, you will say are yearlings because they are so large, and plenty more of the good, useful kind that pleases everybody who sees them. Two of the best April gilts are sired by Pawnee Sensation out of Long Lady Hadley by Long King's Equal. They are extra large and smooth and will weigh over 300 pounds now. We could mention more good things that will be offered. They are bred to Pawnee Sensation, Orange Longfellow and B.'s Mastodon. The catalog is instructive, it contains information that you ought to know, and Mr. Barr would be very glad to send it to you and we hope that you will make arrangements to give him your presence sale time. We will say this for our old friend, W. H. Barr, that there is not a more reliable nor painstaking breeder in the state and he and his son are going to show you a splendid offering of bred sows on this occasion. Make it a point to be at Red Oak on February 4th, and secure some of these sows they will offer at that time. See advertisement on page 52.

Nelson's Duroc Sale.

Western Duroc Jersey breeders will be interested in the Fred Nelson sow sale at Lindsay, Neb., on February 11th, first, because of the great line-up of sows he will offer, and secondly, because of the great number that will be bred to his noted grand champion boar, Valley King. Nearly everything in the sale will be bred to this noted boar. Valley King is the greatest son of that celebrated boar, Valley Chief, unquestionably one of the greatest sons of old Ohio Chief. Valley King was a champion boar at the Iowa and Nebraska State Fairs in 1911 and was the greatest boar out that year. Mr. Nelson secured him last winter to place at the head of his herd, not alone because of his winnings, but also because of his ability as a breeding boar. He is a wonderfully large boar and has weighed close to 1,000 pounds. This offering should therefore be a very attractive one to those breeders and farmers who want to retain a little size in their herd. He is selling twenty-five yearling and matured sows and fifteen of his very best gilts. There will be eight splendid daughters of old Red Chief Wonder in the sale, also daughters of the Nebraska champion boar, Belle's Crimson Wonder, Medoc Over, Crimson Jack and Pride's Crimson Over. His gilts will be sired by Valley King Sensation Wonder. There are just two of these Valley King gilts in the sale and they will be bred to Red Chief Wonder. There are a few also that are sired by Col. Chief, Red Chief and Uneeda Crimson Wonder. The breeding of the sows in his sale are all that the most exacting breeders can look for, and individually they are a splendid lot throughout. A sow bred to the old grand champion boar, Valley King, is one of the best propositions that an up-to-date Duroc Jersey breeder can buy. Write Fred Nelson, Lindsay, Neb., for catalog and kindly mention The Homestead. See advertisement on page 46.

The above illustration is a good likeness of a group of sows shown by Hanks & Bishop, New London, Iowa, at the Iowa and Nebraska State Fairs, 1911. See their sale advertisement on page 50.

Harding & Son's Duroc Sow Sale.

One of the very best offerings of Duroc bred sows to be sold this winter is that of Wm. Harding & Son, Brimfield, Ill., on February 14th. Harding & Son are progressive and, while they have one of the good herds of the land, they are always willing to add an animal that bids fair to improve their herd. The writer has visited this herd at different times and always found lots of good hogs. Uniformity is a desirable thing in the breeding business and they sure have it. They are breeding the big, smooth kind with quality and finish, the kind that raise large litters and mature quickly and fill the pork barrel early in life. What have they done to bring about such results? They have always been careful in selecting good specimens of this type, but always of the very best breeding. A great big, smooth son of the noted Choice Goods was first used on Proud Advance, Inventor, Col. and Ohio Chief sows. Then they bought Proud Defender by Defender, dam Proud Fancy by Proud Advance. This boar has been a wizard for improvement in the herd and many of his produce will be offered in this sale, among which are show prospects. Twelve choice gilts are bred to him. These are the get of the next boar in line, Meddler by Proud Chief by Ohio Chief, dam by Golddust Jim. This boar has proved his worth as a sire, as his produce will show. This boar was the top of R. J. Harding's August 6, 1911, sale and was third-prize senior yearling boar at the Illinois State Fair in 1911. Supreme Goods by F. J.'s Choice Goods by W. L. A.'s Choice Goods is another great young boar in use and was bred on the farm. Their latest purchase was the great brood sow, Fond Memory, bred to Volunteer, from

IN AUCTION

AT FARM NEAR

OSCEOLA, NEBRASKA

Tuesday, February 11

45 BIG, smooth sows and gilts will make up the offering. Every tried sow listed has proven an extra good mother. Every fall sow and spring gilt is of especially good breeding and individuality. The offering is strong in the blood of J.'s Jumbo by Wade's Jumbo and for size and bone they are hard to beat. Some are by Mogul's Pride by Mogul's Prince and the offering is bred to **Hather's Hadley 2d** and **Choice Orange** by Big Orange. Try to be with us sale day or be represented. Col. A. W. Thompson, auctioneer. Thos. A. Shattuck, field man. Send all bids to him. Address (mention The Homestead) for catalog

A POLAND CHINA BRED SOW SALE OF IMPORTANCE TO ALL BREEDERS

Will be made by THOS. F. WALKER & SON, ALEXANDRIA, NEBRASKA,

SALE TO BE HELD IN SALE PAVILION, FAIRBURY, NEBRASKA, SATURDAY, FEBRUARY 15, '13

This will be a sale of importance to nearly every Poland China breeder of the country, as it will contain many sows that are the sort needed to improve new herds and to sustain older ones. The best breeding obtainable will be found here, and the individuals are the sort that please good judges.

The get of the great breeding boar, **Blue Valley,** will be found here in such numbers that those who wish them may be supplied. His daughters are mostly bred to **Blue Valley's Orange,** the top boar in the James October sale. This will be the only place to buy a sow bred to **Blue Valley.**

Try and be on hand sale day. It is a sale that few can afford to miss. Best of hotels in Fairbury, and good train service. Main line, also branch of Rock Island. Hack meets Burlington trains at Kesterson, 3 miles south of Fairbury. Send for catalog at once. See these hogs sell if possible. H. S. Duncan, Auct. J. C. Price, field man. Mention Homestead and address

THOS. F. WALKER & SON, ALEXANDRIA, NEB.

which they rightfully expect to get another herd boar. We wish to call attention to the fact that prices have always been very reasonable in Harding & Sons' sales and the wise readers of The Homestead will take the tip that it is a good place to go to buy first-class stuff. H. E. Browning will represent The Homestead. Colonels Igleheart and Reppert, auctioneers. For catalog and further particulars write Wm. Harding & Sons, Brimfield, Ill. advertisement on page 53.

Skillen's Duroc Sale.

On February 10th R. M. Skillen, Greene, Iowa, will hold his second annual sale of Duroc Jersey bred sows at his farm, five miles west of Greene. He will sell forty head of two-year-old, yearling and fall yearling sows and spring gilts. There will be eleven fall yearling sows by Chuck's Model, noted breeding son of Model Chief, and these are bred to Prince of Wonders, a son of the noted Iowa champion, Crimson Wonder Again. There will be three two-year-old sows sired by Waveland Ohio Chief and one by Kelly's Pilot Wonder. Twenty-five gilts by Select Goods, Merfield's Wonder, Waveland Ohio Chief and Chuck's Model complete the offering. The two-year-old sows are bred to Chuck's Model and the gilts are bred to Skillen's Col. Gano, a full brother to Col. Gano, the noted sire and show boar owned by Messrs. Harding and Seddon. This young boar is a very promising fellow and looks like developing into a very valuable sire. There will also be a few gilts bred to Advancer Chief by Model Advancer. This is Mr. Skillen's second offering and he has made a special effort to get together a bunch of sows that would be a credit to his ability as a breeder. He has used only the very best boars and boars that were bred along the most fashionable lines, and the offering will show that he has been successful in breeding and developing the type of hogs that are in demand at the present time. The offering is a good one all the way through and we urge those intending to buy bred sows to make their arrangements to attend this sale. Send for a catalog, mentioning The Homestead, as per the advertisement on page 49. Carlos C. Palmer will represent The Homestead at this sale.

Roan's Fourth Annual Jack and Jennet Sale.

G. C. Roan, La Plata, Mo., proprietor of the Clover Leaf Valley Jack Farm, will hold his fourth annual sale of jacks and jennets on Monday, March 10th, selling forty head divided about equally, twenty jacks and twenty jennets. Mr. Roan has spent his entire time since a boy breeding and handling jacks and jennets and knows the business as do few. Since starting his annual sales he has each year offered a better lot than on any preceding year, and this, his fourth annual sale, will be no exception. He is arranging for the comfort of his guests by erecting a large sale pavilion and it is his intention to dedicate it by selling such a superior class of stock that all will be pleased with his efforts to furnish the best only. The twenty jacks are blacks with mealy points, and in point of bone, constitution, heads and ears are a superior lot. Mr. Roan has this year more two and three-year-old jacks than he has ever offered at one time and it is our opinion that the more discrimnating buyers will be greatly pleased with these. The older jacks are animals Mr. Roan is prepared to stand squarely behind with as good a guarantee as is given. He knows them, knows the kind of colts they sire and will cheerfully tell buyers just what a record each has made. He has paid much attention to the securing of jacks with great constitution, bone, heads and ears, and has been careful to get a uniformly good lot in his barns for this sale. He has no small fellows that are not desirable and is following out his plan of selling such stock as in his judgment will please the greatest number. The twenty jennets are regular breeders, some sell with colts at foot and practically all are bred to Mr. Roan's stud jack, J. C., a jack that has few superiors as a sire. Mr. Roan wants you to write now for his catalog so that you can see how the stock is bred. It contains the picture of every jack in the sale and all were made from pictures taken since January 1, 1913. Note page 42 for his advertisement and when writing him kindly mention this paper.

MORRIS FOWLER'S GREAT SALE

POLAND CHINA HOGS **BELGIAN HORSES** **HEREFORD CATTLE**

ARCADIA, NEBRASKA, WEDNESDAY, FEB. 12, 1913

30 HEAD of Big Poland China Sows will go in the sale. They are the get of Great Wonder and a few other noted sires, and are bred to TOM SAMPSON, a son of Shattuck's noted boar, Sampson, and another young boar, a son of Lingford's Sampson. These are a great pair of boars, and the sows are the real brood sow kind. Have sold no gilts this fall. Every one has been kept for this sale. Have shipped boars to most of the corn-belt states.

ONE BELGIAN STALLION WEIGHING CLOSE TO A TON

He is right in every way. Breeding and guarantee made known sale day.

TWENTY-FIVE HIGH-CLASS HEREFORD CATTLE will also be offered. Mention The Homestead and write for full information. Address

MORRIS FOWLER - - - ARCADIA, NEBRASKA

Tuesday, February 5th, at Grant Lynn's.

On the above date, at the farm, four miles northwest of Spirit Lake, Iowa, Grant Lynn will sell his offering of brood sows in a comfortable new pavilion. There will be something over forty head of extra choice Duroc Jersey sows and gilts. Of the eighteen tried sows every one is a producer of the first class and have with only one or two exceptions produced two litters this year. They are in good condition, indicating their vigor as breeders, as it is the sows which produce at high pressure and which come back in good conditon for the next litter that are the profitable kind of brood sows to have. The gilts, sired by the good boar, Evergreen Prince, are a nice lot, averaging unusually good in stretch. King's Defender, a son of the great prize-winning and champion boar, Defender, sired a number of real good gilts this season. Only choice individuals are cataloged in the sale. The young herd boars, G.'s Crimson Wonder by Crimson Wonder I Am and Lynn's Golden Model, are extra good ones and we look for the Crimson Wonder boar to develop into one of the worthiest of the get of this famous sire. The gilts by Evergreen Prince and bred to this young boar will be as good bargains as any sale can offer. Just look them over sale day and then look at the boar. The yearling sows offered are choice sows individually, stretchy and having farrowed two litters this year, all big ones, it shows them to be breeders. Several are by the old herd boar, Col. Grant, that Mr. Lynn sent to the Mr. Herkelmann herd at Elwood, Iowa, a year ago. Col. Grant sired big hogs and gave them lots of bone and stretch. There is a yearling, Golden Helen by a son of the old Golden Model, bred to Evergreen Prince November 22d that will be a good one to buy, because she looks like a real brood sow and, besides, has delivered the goods already in this herd. Of a litter of six gilts by Evergreen Prince, out of Orange Lady, a sow bred strongly in Advance and Dale blood, there are four in the sale.. Some extra breeding is found in the gilt by Evergreen Prince, out of a sow by Freed's Col., second dam by Manley Orion, and the gilt herself is a top-notcher. Mr. Lynn has made a wonderful improvement in his herd during the last three or four years, he is a progressive man with whom it is a pleasure to become acquainted and his herd is one with which acquaintance is profitable. There is no "boom" on in his herd, but the merit is there and characterizes the offering of this sale. Send for catalog if you have not gotten one already and be sure to attend the sale if you can use good brood sows bred to good boars. This sale is the second of the circuit, beginning with Dickey and Fain at Emmetsburg, the day before and closing with J. Schmidt at Everly on Friday. Mention The Homestead in writing for catalogs and you will receive prompt attention. If it is not possible to attend Ray L. Gribben, field man for The Homestead, will handle mail or wire bids conscientiously to your advantage. Address Grant Lynn, Spirit Lake, Iowa. See advertisement on page 49.

De Kol Hengerveld Burke, one of the prepotent sires in the Idle Hour Farm Holstein herd of T. H. Russell, Geneva, Ohio. He is one of the greatest of the present-day sires, and is a son of De Kol 2d's Butter Boy 3d, with a record of 110 A. R. O. daughters. See advertisement on page 23.

Williams & Sons' Sow Sale.

On February 13th, at Villisca, Iowa, L. B. Williams & Sons will make their annual sale of forty big-type Poland China sows, and this firm never fails to put up a good offering. They breed the large kind and have been breeding that kind before we heard very much of big-type Polands. They were in the business when the Perfections and the various show types were winning all the ribbons and were selling for the thousands, and even at that time they stuck to their big ones. They saw the day roll around when they had what the people wanted and they are again selling that same kind in this sale. For this occasion they have selected six of their very best tried sows. Three of these are daughters of their splendid breeding boar, Surprise All; two are daughters of Victor Hadley, and the other is a daughter of old Extended Jr. Four good fall sows that go in the sale are all daughters of Surprise All. They have drawn on thirty head of spring gilts and they have some outstanding good ones. Readers of The Homestead will remember they made a boar sale last fall and it was one of the best of the fall season. These gilts are in most cases litter sisters to that string of boars and there are some outstanding good ones in the bunch. These gilts are sired by Orphan Wonder, a son of the 1,040-pound boar, The Big Orphan, and the latter boar was one of the most conspicuous winners at the Nebraska State Fair last fall. Orphan Wonder is a splendid boar and it now looks as though he might follow in the footsteps of his illustrious sire. Then there are some very excellent gilts in the sale by W.'s Quality, a son of the great Blue Valley Quality, that formerly headed the Thomas Walker herd over in Nebraska, and the balance are sired by old Surprise All. Among these are three extra choice gilts by W.'s Quality and out of Isabel by Big Wonder, the latter being a 1,000-pound boar that headed the W. L. Hanna herd at Corning, Iowa. These three gilts are litter sisters to the $100 boar pig in their fall sale that went to A. Z. Scott, Massena, Iowa. Two of these are bred for March and the other for April farrow and they have all kinds of size and plenty of quality. Then there is a litter of five by Surprise All and out of Blue Valley Priceless 3d that are hard to beat if you want the strictly large ones, and these are all bred to Orphan Wonder. Write L. B. Williams & Sons, Villisca, Iowa, for catalog and kindly mention The Homestead. See advertisement on page 46.

NEBRASKA'S GRAND CHAMPION DUROCS

100 HEAD CHOICEST SOWS 100

FEBRUARY 12

A. W. LAMB, ALBION, NEBRASKA

55 HEAD. 20 TRIED SOWS, 35 GILTS

I AM selling fourteen tried sows, six fall sows and thirty-five spring gilts. Seventeen of these are bred to the Nebraska champion boar, **Belle's Crimson Wonder**; ten to **B. & L.'s Wonder**; four to **Golden Model 3d**; five to **Dusty Crimson**, champion at Albion Fair and nineteen to **Riverview Wonder.** These are sired by the old champion, Belle's Crimson Wonder, B. & L.'s Wonder, Red Chief Wonder, Ray's Wonder and other noted prize-winning boars. Catalog now ready. When writing for it kindly mention The Homestead. Address

A. W. LAMB - - - ALBION, NEBRASKA

Col. T. C. Callahan, auctioneer.

FEBRUARY 13

A. R. BARNES, PETERSBURG, NEBRASKA

45 HEAD. 30 TRIED SOWS, 15 GILTS

I AM selling as good an offering of sows as has ever passed through a Nebraska sale ring. Daughters of such noted sires as **Belle's Crimson Wonder, B. & L.'s Wonder, Gold Dust Jim 2d, Blue Ribbon Model, Uneeda Crimson Wonder,** and others. These are bred to the old champion, **Belle's Crimson Wonder, B. & L.'s Wonder, Col. Chief,** and **Golden Model 3d.** In point of breeding and individual merit, you will find this offering one of the greatest of the year. Write for catalog and mention Iowa Homestead. Address

A. R. BARNES - - PETERSBURG, NEBRASKA

Col. T. C. Callahan, auctioneer.

E. Z. Russell will represent The Homestead at these sales and will care for any bids sent in his care.

White & Smith's Short-horn Sale.

The fifty head of Short-horn cattle that White & Smith will sell at Chicago, Ill., February 12th, are a lot of show and breeding propositions that should appeal very strongly to those wanting the best. Leslie Smith is a master cattleman and he presents this offering confident the cattle will satisfy the most critical. The breeding is of the very best and the cattle will be sent forward in that high-class condition for which Mr. Smith is noted. There are forty-one females in the offering, including a number of daughters of the undefeated grand champion, Ringmaster, while nearly one-half of the balance are either bred to this bull or have calves at foot by him, and the prospective value of these matings is impossible to estimate, not only on account of the worth of Ringmaster as a sire, but also from the fact that many of the females are outstanding show propositions. Roan Queen, the grand champion cow at the 1912 International, is cataloged for this sale. She is the winner of twenty championship ribbons, which tells sufficiently the story of her individual worth. This grand cow is due to calve two weeks after the sale to the service of Ringmaster, a fact that adds greatly to her value. Snow Queen by Superbus, dam Imp. Pitlivie Caroline, the dam of the champion, Ringmaster, is an outstanding show heifer, winner as a calf and as a junior yearling. She has lots of character, is very deep and thick and should be in demand sale day. Another good one is Cheerful 8th, a Clipper, first as a senior yearling last year at Sedalia and fourth at Chicago. She is a top animal in any company and is bred to the champion, Ringmaster. An evenly balanced one is Violet Ruby by March Knight and out of one of the best producing cows in the herd. She is well along in calf to the service of Ringmaster. Lavender Princess 7th and Sparkling Gem are two strong heifers and both are bred to Ringmaster. A very sweet daughter of Ringmaster is listed in Dainty Duchess, belonging to the Broadhooks tribe, and Flower Girl 14th by Ringmaster, out of a March Knight dam is attractive, both as regards breeding and individuality. Queen Gloster by a son of Bapton Ensign is a thick, meaty young cow and is made doubly attractive from the fact that she sells with a heifer calf at foot by Ringmaster. Sweet Jessamine 3d sells with a roan bull calf at foot by Ringmaster. Mr. Smith is keeping last year's bull calf from this cow, also sired by Ringmaster, as a herd prospect. He has refused $1,000 for this young bull. There are plenty of other attractive female propositions in the sale, all bred right and made right, the sort that one may confidently look for at the hands of so excellent a breeder and fitter as Leslie Smith. Nine bulls are in the list, including four youngsters by the champion, Ringmaster, probably the best of which is Royal Master, out of a Victoria dam, belonging to a branch of the tribe very rare in this country. He is a youngster of excellent lines, strong head and the rugged sort that should develop into a successful sire. Two younger calves, a Broadhooks and a Duchess of Gloster, both by Ringmaster, are in the list and both are very attractive calves, well made, well meated and out of strong dams. There are other excellent young bulls by good sires that will please you on sale day. The offering is one of high merit throughout and the sale should be liberally patronized by the Short-horn fraternity generally. If you have not already received a catalog send for one at once to White & Smith, St. Cloud, Minn., as per the advertisement on page 45. When you write kindly mention The Homestead.

A Sale of Duroc Jerseys from Prolific Breeding.

A selection from 225 head of pigs raised last spring, one of the most severe seasons for raising pigs that most breeders remember, is offered by J. Schmidt at Everly, Iowa, as the final event in the series of northern Iowa Duroc Jersey sales. His date is February 7th and the sale will be held in a heated, roomy pavilion at the farm, six miles north of Everly. We think there is much in favor of a bunch of gilts which could be selected from such a large number of pigs as this. It shows that the herd is in the hands of a breeder who must give care and attention of the most exacting sort, and we believe other breeders like to buy from a man who manages his stock in this way. There is an evenness of type among the gilts that will be sold, and they certainly are in prime breeding condition. We predict a set of more than usually satisfied customers in the buyers at this sale. Mr. Schmidt wants to put in only the best for just that reason, and he has made his selections very carefully. The gilts are out of sows that are bred in the best lines and come from most noted stock, as the following will show. There are gilts to be sold from sows by Royal Muncie by Muncie Chief, Iowa Broadback by Minnesota Broadback (first at the Minnesota and South Dakota fairs), Model's Boy by G. P.'s Model, Greever's Orion (a Minnesota prize winner and sire of winners), Crimson Dale by old Dale, Ohio Chief 4th and Freed's Col. Just as a sample of the prolific sows on the farm is Nancie by Ohio Chief 4th, dam by Model's Boy, which farrowed a litter last spring of fourteen, raised nine of them, all good ones, and three of the five gilts of the litter will be sold sale day. They are by Col. Tientsin and one will be bred to Royal Muncie, the other two to Col.'s Model, a big, smooth fall boar the most active sort and desirable type. He has been used on most of the yearlings and some of the young sows also. The older sows which will be sold are a very thrifty appearing lot. They were in nice condition and did not look as though they would be loaded with fat as for a market day sale. They have nicely arched backs, are stretchy and a good-footed lot. They have bred well for Mr. Schmidt and are in their prime, so will be useful on other farms. It is a rugged offering all through and will make friends for its owner. When you write mention The Homestead. Ray L. Gribben will attend the sale for this paper and will handle your bids honorably. Address J. Schmidt, Everly, Iowa. See advertisement on page 49.

Glasier's Algona Poland China Sale.

J. M. Glasier, Algona, Iowa, sells his excellent draft of Poland China brood sows at Algona fair gronnds Wednesday, February 5th. This is a big-type herd, characterized by good bone throughout and size as well. The breeding Mr. Glasier has selected has been that which has had the real merit of producing size, big litters and a smooth type of a pig. Some of the breeding with best records back of it is found in the catalog and the records it has made since coming into Mr. Glasier's bands show both the good results expected of good breeding and the handling of a practical hog man. We would recommend especially that those living in the central northern part of Iowa (not barring anyone from any other location who wants and needs this better class of hogs attend this sale, for it is full of good things, selected from a herd managed skillfully and as well as any, but built up quietly. Mr. Glasier's offering is entitled to rank equal with most of the big breeders, but he has been very modest in pushing his herd forward. Just to refresh memories of the description of last week, we give the breeding of Big Kossuth, the herd boar that sired the majority of the spring gilts. He is by Ellerbroek's A Wonder, dam Mollie B. 2d by King, second dam Mollie B. by Chief Leader, out of the famous old Mollie Fair. The young service boars, Valley Longfellow and Count Halvor Jr., are well bred in the choicest big-type breeding. Valley Longfellow is a boar of the most generally accepted big sort, with length and exceptionally big bone and good feet. There is a two year old that looks like the prize-winning type we see at the Nebraska and Sioux City fairs and at Des Moines. She is the dam of a yearling sow by the great Colosso, which will be sold. No. 12 is an unusually good sow also and there are gilts that will be profit makers on any farm. We have confidence in this offering and freely advise prospective buyers to attend. The sale is to be held in comfortable quarters on the Algona fair grounds and Mr Glasier will have some of his herd, which he takes back for another breeding season, there to show you his type. When you write for catalog mention The Homestead. Mail or telegraph bids may be sent to C. C. Carlin, Homestead representative, who will attend the sale. Address J. M. Glasier, Algona, Iowa. See advertisement on page 48.

H. H. SHAW'S ANNUAL SALE

DUROC JERSEY BRED SOWS

Will be held in Pugh's sale pavilion,

Hebron, Nebraska, Tuesday, Feb. 11th

IN THIS sale offering will be found Durocs that are high class enough to meet with approval by the most exacting. Everything is of the very best blood lines, and is drawn from the very tops of many of the best herds of the country. It is our aim at all times to put up for sale only such hogs as we know will do justice to the breed and credit to our herd. Probably as good a sow as will sell this season East or West will be found here. She is Hebron Queen by Lincoln Wonder. She is not the only good one in the sale, but she is as good as the best anywhere. Many of the sows that will be offered are bred to the great young boar

CRIMSON WONDER CHIEF

by Crimson Wonder 3d and out of a dam by Chief To Be. Others are bred to Rosebud's Wonder by Col. Wonder and out of the great sow, Rosebud's Pride. Try and attend this sale. We want you to be with us. Col. W. J. Thompson, Auct. J. C. Price, field man. Mention The Homestead and address for catalog

H. H. SHAW, HEBRON, NEB.

LINGFORD'S GREAT

POLAND CHINA BRED SOW SALE

Will be held in Bradstreet & Clemens' sale pavilion

GRAND ISLAND, NEB., THURSDAY, FEB. 13, '13

50 HEAD, mostly Gold Dust Hadley and Sampson sows. That a sow is bred to or sired by Gold Dust Hadley or Sampson is about all that need be said. Most of this offering are. A few are bred to Revenue Exception, the best young boar that I could possibly find last fall. He is a grandson of Exception. Every one of the sows listed for this sale are the real utility kind. Every man who bought in my last winter sale made money. They will do so again this year, as I breed hogs that make money for all they consume, and they are ready to market at desirable ages. They are the kind that can and do win in the greatest hog show on earth, the Nebraska State Fair. Attend this sale, or send bids to J. C. Price, field man. Col. Z. S. Branson, auctioneer. Mention The Homestead and send for catalog at once. Address

W. A. LINGFORD, DANNEBROG, NEB.

DORR'S 15th ANNUAL POLAND CHINA SOW SALE

MARCUS, IOWA,
(POSTOFFICE, REMSEN, IOWA)

TUES, FEB. 11, 1913

65 HEAD practically everything our own breeding, and we will be glad to have you compare them with the best you have seen. Thirty-four gilts all sired by Dorr's Expansion. Spring gilts by Big Defender Expander, a few by the great champion, Blue Valley Chief. Offering bred to Dorr's Expansion, Expander, Big Monarch by Gold Dust Hadley and Big Tecumseh by Blue Valley Chief. Our herd has produced prize winners for us. Stock we have sold has produced prize winners for others. Farmers who breed only for market have made good money with our breeding. This is the best offering we have ever made and is bound to keep the record straight.

Sale, Feb. 13, 1913. DOON, IOWA.

J. M. PEERY

ALVORD, IOWA,

FRIDAY, FEB. 14, '13

A DISTINCTIVE offering of 45 Poland Chinas, 28 fall gilts, 10 spring gilts and a half dozen tried sows. The entire lot is made up of the same kind that have given success wherever we have sent them from previous sales. Many of them have produced boars which are among the tops in several herds. There are good things in plenty here. Sows and gilts sired by Peery's Long Orange by Big Orange; Great Expansion by Dorr's Expansion; Jessie Chief by Lyon Chief; Big Bone; Chief Price Again, and Ruebel's A Wonder. Our selections for our herd have been consistently along a definite line. All bred early and real brood sow types.

J. A. Benson, auctioneer.

Emmetsburg Duroc Jersey Sale.

We are this week running the last notice of the sale of Duroc Jersey bred sows to be held by F. H. Dickey and H. S. Fain at the sale pavilion of Mr. Dickey's on his farm in the edge of Emmetsburg, Iowa, on Tuesday, February 4th. This offering is noted for being the consignment of the best of the two herds and for that reason should contain the very best sort of sows. As we stated last week, the boars that have sired the offering are all big ones and, in addition, the sows are bred to some sires that are even a little better than the older ones, a point that would naturally be expected of the more up-to-date breeders who are always looking to the improvements of their herds when making purchases of herd boars. The young boars that Mr. Dickey has used this season were of the sort that carry good lines of breeding, as, for example, the young Crimson Wonder boar, D.'s Crimson Wonder by the great prize-winning Crimson Wonder I Am, out of a sow by Model Advance. He used, in addition to this one, another which is called D.'s Crimson Critic by Crimson Critic, out of a Golden Model-bred sow. We think the most prominent feature of the herd at Mr. Dickey's is the great lot of matured sows that he kept for his breeding herd last winter, a bunch that won most favorable comment from everyone who attended the sale and got a chance to look over the breeding herd the day of the sale. As was noted in these columns last week, the young gilts that Mr. Dickey will sell are from this great lot of sows and it means that they have a good deal of "come-out" in them. The offering from the Fain herd is quite a little ahead of the sows put in by this man a year ago, and is a particularly good lot this year. There are some good gilts by the old herd boar, Fain's Select, a boar which has made a lot of improvement since a year ago, now being a hog that has as much size as one would want in a boar and, best of all, has sired a lot of gilts that have the same size and are long in body, wide, especially well ribbed, and among them are some that will put improvement in most any herd into which they may be taken. One of the heaviest gilts in the sale, one weighing close to 375 pounds, is by this boar and out of a sow by the old champion boar, Freed's Col. She is square built, has good feet, is of a desirable color and an all-around toppy sort. Three other gilts by Fain's Select, out of a dam by Model Wonder, are listed, and in their favor it should be remembreed that they are three cracking good ones from a litter of ten. What was perhaps the very choicest pig in the middle of January was a spring gilt by Fain's Select, out of a sow by Jack Jumbo, bred for early farrow to Missouri Model Top Jr. The gilt weighs 350 pounds, is a showy thing all over and bred to the young Missouri Model Top boar. She ought to start a lot of competition when her turn comes in the ring. We feel like saying a word for this young boar, although he was given plenty of attention a week ago. It took him five or six months to show his excellent qualities, due undoubtedly to the severe weather at farrowing season, but when he began to develop he showed real character and breeding appearance that made Mr. Fain stop his search for a young boar for breeding service this fall. (Mr. Fain bought him in dam.) He is now a rugged sort of a boar, wide and deep, with his legs put right out where they belong and plenty of length. He has good bone and stands very straight and strong on his toes. He certainly is a "comer." You will like the offering these men make and you will have a comfortable place sale day in the pavilion at Mr. Dickey's farm. Write for catalog, mentioning The Homestead. Ray L. Gribben, representative of The Homestead, will handle mail or wire bids in your interest. For catalogs address either F. H. Dickey or H. S. Fain, Emmetsburg, Iowa. See advertisement on page 49.

My Fourth Annual Jack and Jennet Sale of the

CLOVER LEAF VALLEY JACK FARM

WILL be held in my new sale pavilion at La Plata, Macon county, Mo., on March 10, 1913, when I absolutely guarantee to sell the best bunch of jacks and jennets that I ever have offered for sale and one that will equal or surpass any offering of this stock made during the year 1913. Every jack and jennet registered and black with white points. I want you to write now for my catalog illustrated with the photographs of every animal taken from life January 2, 1913, and telling you more truths about this stock than I could possibly put in a great big five-page advertisement costing thousands of dollars. I sell more jacks that pay for themselves in one and two years than any man in the world.

WRITE FOR IT NOW

G. C. ROAN, PROP., LA PLATA, MACON COUNTY, MO.

Humerick's Sow Sale.

On Saturday, February 15th, Chas. W. Humerick, Atlantic, Iowa, will sell fifty head of his big, quality kind of Poland China brood sows and he is one of the breeders who always put up a splendid offering. In fact, we never did see Mr. Humerick run a poor lot of sows through a sale ring and he is going to keep up his reputation this time by selling one of the best bunches of brood sows that will go through a sale ring during the month. He is cataloging twenty of his very best tried sows and they are sired by New Tecumseh, Big Jericho, Iowa Model, Smooth Wonder 2d, King Wonder and Victor Hadley. His spring gilts will be sired by Victor Hadley, Big Buddy and the great boar, King Wonder. He is also selling one extra good brood sow that is a daughter of Extended King. She is one of the very best brood sows he will offer and she is out of a daughter of Big Jericho and she goes into the sale bred to Big Tom Jr., a son of the noted winning boar, Big Tom. Another good sow is a daughter of Iowa Model, he by old Crow's Model, and she is also bred to the same boar. He is selling an outstanding good spring yearling out of this sow and she is sired by Black Crow, a Crow-bred boar, and she is bred to Big Tom Jr. A good yearling by Big Jericho and out of Jessie Jumbo 2d, a daughter of old Long King, and by the way she was the top sow in his sale last winter, and she goes in bred to Big Tom Jr. A good daughter of King Wonder goes in bred to New Tecumseh for an early litter and she is one of the good sows he will offer in the sale. There are others, too numerous to mention, but the catalog will tell you all about them. Send for it at once and mention The Homestead. Bids sent to M. T. White, Homestead representative, in care of Mr. Humerick, will be attended to on day of sale. See advertisement on page 46.

The great Duroc Jersey show and breeding boar now at the head of Swan & Ellis' herd at Indianola, Iowa. See field note regarding their sale.

Lamb's Great Sow Sale.

One of the greatest offerings of Duroc Jersey brood sows that will be sold in the West this winter will be that of A. W. Lamb, at Albion, Neb., on February 12th. He is going to catalog fifty-five head and never since he has been in the business has he been able to put up such an offering, and it is conceded that he has heretofore sold some great sows. Included in his offering will be fourteen yearling and matured sows, six fall yearlings and thirty-five spring gilts. Seventeen of these are bred to his old champion boar, Belle's Crimson Wonder, and these in themselves would be sufficient attractions for any one sale. But he has other good propositions to offer. He will also sell ten head that will be bred to B. & L.'s Wonder, the second-prize junior yearling boar at Lincoln in 1911. Five sows in this sale will be bred to Dusty Crimson, the grand champion boar at the Albion County Fair, and here should be some attractions to those who want to get into the blood of the large kind and at the same time the leading winning kind. This boar, Dusty Crimson, is a son of the champion, Belle's Crimson Wonder, and he is out of a dam by the 1,000-pound boar, Dusty Critic. Mr. Lamb sold this boar to G. E. Samuelson for $400, but he bred five sows to him for this sale before he went. Nineteen head in the sale will be bred to Riverview Wonder, a son of Wallace Wonder. Among his attractions is Fancy Maid by Wallace Wonder, a wonderfully good sow, and she is bred to Golden Model 3d, a son of old Golden Model 2d. Nora Wonder 2d, a yearling, sired by B. & L.'s Wonder, is also one of the choicest sows he will offer and she goes in bred to Dusty Crimson for an early litter. Her litter sister will be No. 3 in the sale and she is also a good sow. He is selling some of the best fall sows and the grandest lot of spring gilts that you ever saw and not a poor one in the bunch. This is a strong statement, but we will back it up on sale day when you get your eye on the bunch. By all means

CHAS. A. SLEPICKA'S
SALE OF SHORT-HORN CATTLE
At farm near TOBIAS, NEBRASKA, FRIDAY, FEBRUARY 14, 1913

This consignment of Shorthorns contains cattle carefully selected, well grown and nicely conditioned. They carry blood lines that ensure quality.

CHAS. A. SLEPICKA - - - TOBIAS, NEBRASKA

send for the Lamb catalog and when writing for it kindly mention The Homestead. E. Z. Russell will represent The Homestead at the Lamb sale and will care for any bids sent in his care. See page 41.

Widle & Son's Grand Champion Offering.

One of the greatest Duroc Jersey brood sow offerings that will be sold in the state of Nebraska this winter will be the fifty-five head that R. Widle & Son will sell at Genoa on February 10th. One of the decided attractions in their sale will be the fact that thirty-five or forty head will be bred to the champion and grand champion boar, Critic B. This noted boar is a son of Dusty Critic 2d and he is a line-bred Critic boar and carries with him all the size of the celebrated Critic family. Widle & Son got championship on him at Lincoln and championship and grand championship on him at Topeka. Nearly all of their best sows are bred to this noted boar, and they will have attractions almost too numerous to mention. They will sell fifty-five head and twenty of these will be yearling and matured sows. Ten head of these will be daughters of the well-known boar, Uneeda Crimson Wonder, the boar that formerly headed their herd. They are selling three of their very best shows sows and these are all daughters of this boar and are all bred to the grand champion boar, Critic B. Among these show sows is the first-prize junior yearling at Topeka. Among the tried sows is a daughter of old Prince of Cols.; a daughter of the champion boars, Belle's Crimson Wonder and Freed's Col.; two daughters of Wallace's Wonder; five cracking good fall sows by Crimson Wonder 4th, first-prize junior yearling at the Nebraska State Fair, and thirty head of spring gilts are sired by Lincoln Chief, first-prize Nebraska State Fair boar and one of the greatest sons of old Belle's Chief. The remainder are sired by Allen's Wonder Again, B. & L's Wonder, Blue Ribbon Model, Golden Model 4th and Red Chief Wonder. Few sales in Nebraska this winter will offer such an array of brood sows that are sired by as many noted prize-winning and breeding boars as Widle & Son will sell in this sale. They are also selling a good Freed's Col. sow bred to the grand champion boar, Valley King. Their offering is uniformly good from beginning to end and you will see some grand good sows in their sale. There is no better, more reliable nor painstaking firm breeding Durocs today in the West than Widle & Son and what you buy of them will be right or they will make it right. They are mailing their catalog to those who apply for it. Drop them a postal card and ask them to place your name on their mailing list and kindly mention The Homestead. Bids sent to M. T. White, Homestead representative, in care of the above firm, will be cared for on day of sale. See page 48.

Kreischer's Poland China Sale.

E. W. Kreischer, Mt. Vernon, Iowa, will hold his second annual sale of big-type Poland China bred sows on February 6th. Mr. Kreischer has gotten together fifty head of fall yearling and yearling sows for this sale, the equal of which would be hard to find in any one herd. He has purchased a number of these sows from such good breeders as W. H. Cooper, Hedrick, Iowa; Geo. H. Burge, Mt. Vernon, Iowa, and others. He did this in order that he might have a larger number to select from and be able to pick out fifty high-class sows for this sale. Mr. Kreischer has been improving his herd from year to year by the purchase of some of the best sows to be had, as well as using the best big-type boars obtainable. The noted 1,000-pound boar, Mastodon Chief, has been in the herd for three years and has left an excellent lot of big, smooth sows, a number of which will sell. Mastodon Chief is one of the best big-type boars to be found in the country, having been purchased at the closing-out sale of W. E. Wheeler, Harlan, Iowa, at a long price to use in Mr. Kreischer's herd. The sows will be sired by Big Bone 2d, W. H. Cooper's noted herd boar, by Mastodon Chief, Tecumseh Prince, Thor, Chief Jumbo and a number of other noted sires. This sale will afford the Poland China breeder who wants to buy some high-class sows bred to noted boars, an excellent opportunity to supply his wants at a reasonable price. As there are so many good ones to sell there will be sure to be many bargains. If interested write Mr. Kreischer for a catalog, kindly mentioning The Homestead. C. C. Carlin will represent The Homestead at this sale. See advertisement on page 44 of this issue.

Theo. Martin's Short-horn and Poland China Sale.

Theo. Martin, Bellevue, Iowa, will sell Short-horn cattle and Poland China hogs at public auction on February 13th. The sale will be held at Lawndale Farm west of town. The Short-horn offering consists of twenty-four head, nine of which are bulls and the balance females. Mr. Martin has been working along constructive lines in his breeding operations, both in cattle and hogs. Several years ago he recognized the value of high-class stock for a foundation and he has been continually improving his herds by the use of first-class sires. Any of our readers in need of a good herd bull should keep this sale in mind, as it will afford those in need of such an opportunity to supply their wants either in a high-class Scotch bull to use on pure-bred females or for a big, strong, rugged bull to sire market-topping steers. A June calf of the Rosebud family, sired by Monarch Viceroy, is one of the thickest, mossy-coated calves the writer has seen in some time. From all indications he should develop into a high-class animal such as any breeder would be proud to own. Monarch Viceroy, Mr. Martin's herd bull, has been a prize winner at the Iowa State Fair during the past three years, will also be sold. He is of the Princess Royal family and sired by Orange Monarch, the bull that has sired a great many prize winners for the Messrs. Purdy, of Missouri. A yearling Fashion bull is one of the good individuals of the sale and will meet with approval on sale day. There are other good bulls of the Rose of Autumn, Victoria and Young Mary families that will be sold. The fifteen females include the noted show cow, Victoria Pride, by Fancy Pride and out of Victoria Alexa by Red Robin, second dam Imp. Victoria Mary, a cow that produced thousands of dollars' worth of calves for N. A. Lind. Sweet Fashion is a two-year-old daughter of Monarch Viceroy and is every inch a show heifer. She won sixth at Des Moines in 1911 and fourth in 1912. There is a two-year-old heifer by Monarch Viceroy and out of Victoria Favorite by Imp. Fashion Favorite. Victoria Favorite is a daughter of the show cow, Victoria Pride. Beauty Rosebud is included in the sale. She is the dam of the extra good bull calf above referred to. There will be two good heifer calves, one a Butterfly and the other a Duchess of Gloster. Thirty big-type Poland China sows sired by Big Bone, Big Bone Expansion, Columbia Dude, Peerless Monarch and Big Jumbo have been cataloged. These sows have the size, smoothness and heavy bone that is desired. They are bred to Big Jumbo, one of the biggest, heaviest boned boars of which we know, and Dude's Masterpiece, a son of Columbia Dude. You can secure Mr. Martin's catalog by addressing him and mentioning The Homestead. See page 51 for advertisement.

W. H. COOPER, LIVE STOCK AUCTIONEER
BREEDER OF BIG-TYPE POLAND CHINAS.

J. C. THEOBOLD'S GREAT SALE
HIGH-CLASS DUROC BRED SOWS

will be sold at farm one mile southwest

Ohiowa, Neb., Wednesday, Feb. 12th

40 HEAD--EXTRA CHOICE SOWS--40 HEAD

NO reasonable effort has been spared to make this sale offering one of the very best to be sold this season. Some of the very best of the herd, in fact most of the tops will go in this sale. They are mostly the get of King Col., Ohio Belle's Crimson by Crimson Wonder Again and out of Ohio Belle, Valley Chief Col., by Col. Chief, Ohio King Col. by King Col., and a few others. They are mostly bred to Ohio Belle's Crimson and Crimson Chief, one of the best spring boars in the West. Arrange to attend this sale if at all possible. It is the day following the H. H. Shaw sale at Hebron and the day before the H. H. Koenig sale at De Witt. Col. W. J. Thompson, Auct. J. C. Price, field man. Mention The Homestead and write for catalog to

J. C. THEOBOLD, Ohiowa, Nebraska.

KOENIG'S GREAT ANNUAL SALE
DUROC JERSEY BRED SOWS

will be held at the farm of H. H. Koenig one mile of

De Witt, Nebraska, Thursday, Feb. 13

IN THIS sale we will endeavor to excel any previous offering of Duroc Jersey bred sows that we have made heretofore, and they will be of fully as popular blood lines. Advancer Chief by Chief Advancer is the sire of a great many toppy spring gilts. He sired some of the very best of the sale a year ago. A Crimson Wonder by Crimson Wonder has a few daughters in the sale. He is a sire that has produced some of the very best of the breed. These sows by him are right. Belle's Chief, the sire of many prize winners has a few daughters in the sale also. Echo's Chief by Echo Top King is also the sire of a number and they are the big, heavy-boned sort. The offering is bred for the most part to King's Crimson Wonder by I Am A Crimson Wonder 2d, Red Model by Golden Model and a son of H. A.'s Choice Goods. King's Crimson Wonder was the top of Beem's dispersion sale and is sure a great boar. Red Model is a proven sire, and is out of the great sow, Miss Hope. We would like to see you at this sale. Plan to attend. Col. W. J. Thompson, Auct., J. C. Price field man. Mention The Homestead and address for catalog

H. H. KOENIG, De Witt, Neb., or C. H. KOENIG, Plymouth, Neb.

CLOSING-OUT SALE AT SWITZER'S FEED BARN, HAMPTON, IA., FEB. 4, 1913

DISSOLUTION of the Poland China herd of F. P. Menzie—three big-type herd boars, ten mature brood sows and thirty spring gilts. All sows bred for early litters. The boars are Long Columbia (a two year old by Columbia Chief 2d), C Wonder (a grandson of A Wonder) and Mammoth Jumbo 2d (by Mammoth Jumbo and out of Lady Halvor). All are of excellent lines of breeding. Send for catalog. Auctioneers, Cols. A. P. Mason and W. R. Potter. **Anna E. Sharpe, Admx., Hampton, Iowa.**

KREISCHER'S PUBLIC SALE OF BIG-TYPE
POLAND CHINA SOWS

AT SUNNY HILL STOCK FARM 6 miles southwest of Mt. Vernon, on C. & N., and 4 miles north of Solon, on C., R. I. & P. Railway, on

THURSDAY, FEBRUARY 6, 1913

50 HEAD---12 yearling sows, 34 fall gilts, 4 spring gilts. 7 yearling sows, 7 fall gilts, 1 spring gilt by the famous 1,000-lb. Mastodon Chief. 5 yearling sows, 10 fall gilts and 3 spring gilts by the 800-lb. Tecumseh Prince, bred by W. J. Crow; 8 fall gilts by the 900-lb. Chief Jumbo; 2 fall gilts by the 900-lb. Big Bone 2d, and 7 fall gilts by the famous son of Smooth Wonder 2d, Thor. Sows that make up the offering deserve more than passing notice; they have size and quality so strong in demand, for the fall gilts have up to 9 inches of bone. Entire offering is in nice breeding condition, and bred for early litters to 4 of the best big-type boars in corn belt, which are Mastodon Chief, 1,000-lb. boar when in high flesh, stands on 11 inches of bone and has been at the head of my herd 3 years; Big Jumbo 2d, son of famous boar, Big Jumbo, bred and raised by Peter Mouw; weighed over 1,000-lbs. at 30 months old. Nearly all of Mastodon Chief sows are bred to this boar, and their litters will carry a combination of big-type lines that cannot be excelled. Surprise Chief, one of best sons of great boar, Tecumseh Prince, the W. J. Crow boar used for 3 years, out of a dam sired by 1,000-lb. Long Chief; and Mastodon Wonder, son of Mastodon Chief, out of the 900-lb. Smooth Lady, one of the $100 sows in my last winter sale. Don't imagine there are only a few good ones, and that they will sell high, as is often the case, and balance plain, for there is not a cull in the offering. This will be a rare opportunity to buy good ones at your own price. A cordial invitation extended all breeders and farmers and all lovers of the old kind of Poland Chinas with great size and bone to be with us sale day. Sale held under cover. Parties from a distance will find free conveyance to and from farm, from both Mt. Vernon and Solon. Hogs to be shipped will be loaded on cars free of charge at Solon or Mt. Vernon. Send for catalog mentioning The Homestead. Send bids to C. C. Carlin, Homestead representative, in my care.

ROCK BROOK FARM'S DISSOLUTION SALE OF 125 REGISTERED HOLSTEIN-FRIESIAN CATTLE

AT THE LIVE STOCK SALE PAVILION, UNION STOCK YARDS, **SO. OMAHA, NEBRASKA, TUESDAY AND WEDNESDAY, FEB. 4 AND 5, 1913.**

80 HEAD of registered cattle, consisting of forty cows 3 to 8 years old, milking or soon fresh, and 20 yearling and two-year-old heifers. These females are all bred to sons of either KING SEGIS, KING OF THE PONTIACS or DE KOL 2D'S BUTTER BOY 3D, three of the greatest bulls of the breed. Ten heifers under one year, some of them granddaughters of the above bulls. Ten bulls ready for service and all out of great producing cows. More A. R. O. blood in these bulls than any bulls offered in the West. Forty-five young high-grade Holstein cows and heifers, all milking or soon due to calve by registered bulls. Every animal over six months is tuberculin tested. The results of thirty years of careful breeding are represented in this sale. Catalog ready about January 25th and will be mailed only on application if you mention The Homestead.

HENRY G. GLISSMAN, STATION B, OMAHA, NEBRASKA.

SPIRIT LAKE CHESTER WHITE SALE

Fair Grounds, Spirit Lake, Iowa,

F. W. La DOUX, THURSDAY, FEBRUARY 13th

40 HEAD of choice Chester White sows, including matured sows, fall and spring gilts and a mighty even bunch. One of the banner offerings of this breed for the year. Sires—Joe Cannon by the great Onward, out of dam by Dunbar's Choice, and Gold Coin by Wonder by Nashua Boy, dam Fancy Girl 4th by Prince B., out of Fancy Girl. Service boar in addition to above, Silver Dollar by Ben Royal, dam by the great boar in Mr. Gaffey's herd, Sam B. Few Chester White boars sire the well-shaped pigs with **big bone** and **good feet** that Gold Coin does. A sow bred to him will give vigor and size and strength to the pigs she farrows. This is an extra good Chester White offering. C. C. Evans and Wm. Foshier, auctioneers. G. M. Thompson, Chester White breeder, will represent The Homestead. Address

F. W. La DOUX, - Spirit Lake, Iowa.

Mousel Bros.' Combination Sale

120 HIGH-CLASS HEREFORDS

To be sold in sale pavilion, GRAND ISLAND, NEBRASKA,

FRIDAY AND SATURDAY, FEB. 14 AND 15,'13

Choice selections from eleven of the choice herds of the country. All cattle are of desirable ages and all in good condition. The contributors realize that buyers wish the good ones and they have determined to make this offering one that will not be excelled for some time.

70 BULLS GO IN THIS SALE

and they number among them some as choice as have ever passed through a sale ring in the West. If in need of a herd header for the best kind of a herd, or a car of range bulls, be on hand.

A Group of Herd Heading Bulls in this Sale

The great shortage of beef cattle is just beginning to be felt, but the real shock is yet to come. Range herds of consequence are not many, and corn-belt pastures are mostly empty or already in crops. All beef cattle are quite certain to appreciate in value, but the greatest opportunity for investment is the pure breds.

THE 50 FEMALES

that will go in this sale will be a chance to buy choice breeding stuff that may not be equaled again soon. Buy these cattle before the great rise in cattle is widespread. Attend this sale. It is an opportunity that the careful business man should not overlook. Be on hand.

The contributors are breeders of high-class cattle, their names should be sufficient guarantee of the value of this offering. They are: Gudgell & Simpson, Independence, Mo.; Hugh Whiteford, Guilford, Mo.; O. E. Green, Genoa, Neb.; Geo. O. Benger, Callaway, Neb.; Mousel Bros., Cambridge, Neb.; E. C. Rodwell, Cambridge, Neb.; A. C. Smith, Lexington, Neb.; Fred Mues, Edison, Neb.; G. E. Stryker, Rising City, Neb.; Dauchey Bros., Stockdale, Neb., and Thompson Bros., West Point, Neb. Send for the catalog of this big sale at once. Mention The Homestead when you write. Address

BIG-TYPE POLAND SOWS

L. B. WILLIAMS & SONS' SALE

40 Head---6 Tried Sows, 4 Fall Sows, 30 Gilts---40

VILLISCA, IOWA, FEBRUARY 13, 1913

IF YOU are looking for the "box-car" big type, the kind that will take the fewer number to fill your car when going to market, then come to our sale. We are selling 6 of our best tried sows, 4 fall sows and 30 choice gilts. These are sired by **Surprise All, Victor Hadley, Black Price, W.'s Quality** and **Orphan Wonder.** Write for our catalog if you want the strictly large kind. Address

L. B. WILLIAMS & SONS, Villisca, Iowa.

J. West Jones, auctioneer. Mention The Homestead when writing for catalog.

WALTEMEYER'S DUROC JERSEY SALE

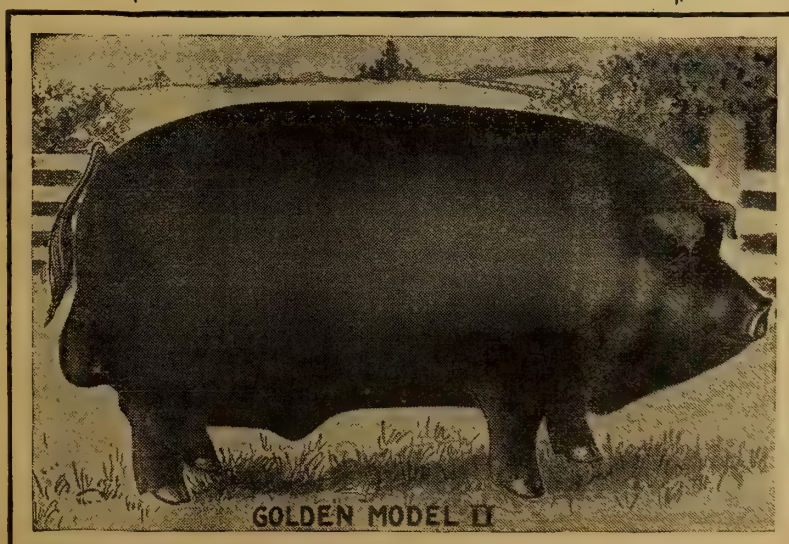
OUR offering consists of fifty sows, the equal of which, from a standpoint of show records, breeding and individuality, have seldom been exposed at public auction. Our 1912 herd of show sows will sell. Among them is Ohio Queen Again, the second-prize junior yearling at Des Moines and Huron, first at Hamline and first and grand champion at Sioux City. She is sired by Golden Model 2d, dam Ohio Queen by Ohio Chief. She is bred to Chief Select (Wm. Reed's herd boar) for a March litter. This sow is one of the best to be sold this year. The first-prize gilt at Des Moines also sells. She is by Golden Model 2d and is bred to Chief Select for a March 10th litter. Fancy Wonder 3d, grand champion sow at Hamline and Huron and first at Sioux City, is bred to High Model. An under-a-year sow that won second at Des Moines, Huron and Sioux City and third at Hamline and her litter sister that won fourth at Sioux City and third at Des Moines, are both daughters of Golden Model 2d and out of a Protection Colonel sow. They are bred to the grand young boar, Sensation Wonder. The under-a-year sow that won first at Huron and Sioux City and second at Hamline, is a daughter of Model Chief's Last and is bred to Golden Model 31st. The second and third prize gilts at Des Moines are bred to Golden Model 2d and the fourth-prize gilt is bred to Golden Model 31st. Model Girl 5th by Protection Colonel is the dam of High Chief (first-prize junior yearling boar at Des Moines in 1912), will sell bred to High Model. The balance of the offering is made up as follows: Five gilts by Chief Select, one by Advancer, three by Dusty Critic, four by W. B.'s Model Chief, one by Proud Colonel and two by Model Chief 2d, that are litter sisters to the pig that won fourth at Des Moines, first at Hamline and Huron. All of the above sows are bred to Golden Model 2d. There will be fifteen fall and spring gilts by Golden Model 2d bred to Sensation Wonder. The sows we are selling have been getting the same care as the sows we are keeping in the herd. They have plenty of exercise and have been fed in such a manner as to insure large, strong, healthy litters. There will be no doubt as to any of the sows being in pig, as every one will be showing up by sale day. Catalogs now ready. When writing mention The Homestead.

TO BE HELD AT MELBOURNE, IOWA TUESDAY FEB. 11

BRED SOWS

GUARANTEE

Every sow guaranteed to be safe in pig to date given sale day or your money refunded.



GOLDEN MODEL II

REGARDING the herd boars we are using, we feel they are too well known to old breeders to need any introduction, but for the benefit of new breeders we will give, in brief, their records. During the past four years at the Iowa, Nebraska, Minnesota, South Dakota State Fairs and at Sioux City, our herd has won 270 ribbons, consisting of 24 champion and grand championships, 117 firsts, 68 seconds, 38 thirds, 24 fourths and other minor ribbons. Nearly 90 per cent of these winnings have been made on the produce of **GOLDEN MODEL 2D** and his daughters. Golden Model 2d was second in class at the Iowa State Fair and first at the Nebraska State Fair in 1909 and had many friends for higher honors at those shows. No boar of the breed has sired as many prize winners as has he during the past four years. He is generally recognized as one of the greatest, if not the greatest, sires of the present day. Buying a sow bred to him is no experiment. There will be about twenty bred to him in the sale. His son, **HIGH MODEL,** was the grand champion of Iowa in 1912 and has proven a sire of merit. His dam was by Ohio Chief and we have confidence in his future. We have had many opportunities to sell him, but will keep him in the herd. Eight sows are bred to him. Golden Model 31st is another son of Golden Model 2d that was good enough to win first in the junior yearling class and grand championship at Sioux City, 1912. We have some of his sons and daughters that we will show next year and they look so good to us that there is no price mark on Golden Model 31st. There will be eight sows in the sale bred to him. Sensation Wonder is the boar we bought of Mr. Stewart to use on our Golden Model 2d sows. He is sired by I Am Perfection Wonder, he by Crimson Wonder Again and out of H. A.'s Queen. He was the third-prize under-year boar at the Iowa State Fair in 1912 and we think him the equal of any boar we ever owned. All of the sows and gilts sired by Golden Model 2d are bred to him. We doubt if four better boars can be found in one herd today. Each year after the fairs are over we find that nearly all of our winners are sired by Golden Model 2d.

Auctioneers—Cols. Kraschel and Allen. Carlos C. Palmer, field man for The Homestead.

H. S. ALLEN'S GREAT SALE

CRIMSON WONDER AGAIN

BRED SOWS

CHARITON, IOWA, WEDNESDAY, FEB. 5

42 HEAD. 12 TRIED SOWS, 10 FALL YEARLINGS, 20 GILTS. 42

Crimson Wonder Again, Grand Champion Boar at Iowa State Fair, and the Sire of Over a Hundred Prize Winners.

I AM selling 12 sows bred to my celebrated champion boar, **Crimson Wonder Again,** and there will also be 8 of his daughters in the sale. There will be more of the blood of Ohio Chief and Crimson Wonder Again in my sale than has ever before been listed in one offering. There will be 20 granddaughters and greatgranddaughters of old Ohio Chief in my sale. It is a great offering, in fact, one of the best I have ever made. Catalog now ready. Write for it at once and mention The Homestead. Address

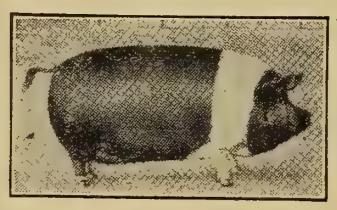
IMPORTANT

HAMPSHIRE SALE

TO BE HELD IN THE TOWN OF



WASHINGTON, IOWA Wednesday Feb. 5

50 HEAD of excellent Hampshire bred sows, among them a number of International Stock Show and Iowa State Fair prize winners. Thirty-two of the sows are tried brood sows from the most fashionable strains of blood, being sired by General Allen 1061, Gold Gem 647, Queen's Choice D. 5015, Missouri Boy 1505 and other noted boars. With one exception these sows are in pig from the first service which shows the useful character of the offering. My sows are all bred to **JOE 7743,** the first-prize junior yearling at the International Stock Show, 1912, and was only defeated by the grand champion boar of the show. **Joe** is sired by Nissen's General Allen, the second-prize aged boar at the same show, and he also sold for $500 at public auction last year. Joe will make a great sire and you should get a sow bred to him if you want to breed Hampshires. J. E. Wright is consigning some good sows and gilts and they are bred to Silver Tip Lad 13085, a son of Silvia 16316, champion under-year sow of 1911. Two of her gilts also go in the sale. Every animal in the sale is bred for March farrow and are an excellent lot of individuals. Write me for catalog mentioning The Homestead. Fred Reppert, auctioneer.

C. A. BROOK, - Washington, Iowa.

SWAN & ELLIS' GREAT SALE

Big, Smooth, Well Bred

Selections Made From Best Herds

Quality Right Your Own Prices

NORTHERN IOWA CIRCUIT DUROC JERSEY SALES

A COMPACT CIRCUIT OF SALES, EASY TO ATTEND ALL AND A GREAT CHANCE TO BUY SOME GOOD SOWS

F. H. DICKEY **H. S. FAIN**

60 HEAD, including eight tried sows, seven fall gilts and forty-five spring gilts, the choice of the two herds. Only the tops of the herds will be offered and from the blood lines represented, it will be seen that both consignments are of the best. The herd boars in each herd are characterized by great bone and stretch, as shown in their offspring. The sires of the offering are: Col.'s King by King of Cols.; Royal Col. by the champion, Freed's Col., dam by Manley Orion; Fain's Select by Chief Select,

TUESDAY, FEBRUARY 4, 1913

and Fain's Col. by Gold Col. There are sows in this sale by other sires and other boars, but these are the principal ones of the two herds. Service boars: Mo. Model Top Jr., a great young boar by Mo. Model Top, D.'s Crimson Critic, D.'s Crimson Wonder by Crimson Wonder I Am, Fain's Select, and others of the herd boars already given. As individuals these boars are good, and are the growthy, vigorous sort that is so often chosen for the practical purposes of the farm and breeding pens.

In F. H. Dickey's Sale Pavilion

EMMETSBURG, IOWA

SPIRIT LAKE, IA.

WEDNESDAY, FEB. 5, 1913

40 head of the choicest that I ever raised, consisting of 18 tried sows and 22 of the best kind of gilts. 22 of the 40 are by my herd boar, Evergreen Prince, which was 3rd at Sioux City last fall, and after going through the breeding season is in much better shape than he was at the fair. I will sell 6 sows that are safe in pig to him. He is by High Col., by Prince of Cols., dam Dallas Queen by Model Prince, the best producing brood sow that I ever hope to own. Ten of the spring gilts are by King's Defender, by the twice champion Defender. The entire offering is in excellent condition, and the sows will all be safe in pig to the old boar, and to G.'s Crimson Wonder by Crimson Wonder I Am, and Lynn's Golden Model by Golden Model 31st by Golden Model 2d, two good sons of these great sires. The sows are stretchy and big and good on their feet. Sale at the farm, 5 miles northeast of Spirit Lake and will be held in HEATED PAVILION

GRANT LYNN.

SPIRIT LAKE, IOWA.

LAKE PARK, IA.

THURSDAY, FEB. 6, 1913

42 head of sows that are bred for early farrow to boars that have size and are bred along popular lines. This sale will be largely a tried sow offering, for there are included 24 tried sows and only 18 spring gilts. The entire herd is strong in Colonel blood as nearly all the sows have large proportions of that strain. The old herd boar, Okoboji Col. traces on his sire's side to both King of Cols. and Advance; his dam was by Inventor, out of a Proud Advance sow. He met some stiff competition at the 1912 Dickinson County Fair, but managed to win over it. He has considerable size, and is a strong vigorous boar. The two young herd boars, litter brothers, used for service this season, show popular blood lines, being by Crimson Wonder Again and out of a sow by W. J. C.'s Prince of Cols. This is a sale where you will find bargains in both quality and blood lines. It will be held at the farm 3 miles southwest of Lake Park. Send for catalogs.

S. L. WEAVER,

LAKE PARK, IOWA.

J. SCHMIDT, EVERLY, IOWA

40 HEAD, the pick from over 225 head that I raised on my farm last spring. There will be about a dozen tried sows, the rest gilts. I have not put in a large number, because this is my first sale and I want to sell only the very best, so those who may buy at this sale will get something which will make them want to buy more from me next year. Breeders who want to make their selections from a herd that has actually been a producing one in one of the most severe seasons for farrowing that we have known, can get what they are looking for here. The

FRIDAY, FEBRUARY 7, 1913

offering is practically all sired by Col. Tientsin, and Royal Muncie. Col. Tientsin is by a son of Carl's Col., out of a sow by Tientsin II. and Royal Muncie is by Muncie Chief, dam by American Royal. A large part of the sows cataloged are bred to a big young boar, Col.'s Model by Col. Grant, and out of a great producing brood sow, Dallas Queen by Model Prince. A practical offering from a practical herd. Address for catalogs as above. Sale on farm, six miles from town, in heated pavilion.

SALE IN COMFORTABLE PAVILION

WE heartily commend the sows advertised above to breeders who may need more females this year, for in this circuit are individuals of meritorious breeding, all with good guarantees by men who are in the habit of standing by their word. By following this compact circuit you will be able to replenish your herds with good blood and a good type of individuals without requiring you to make selections from a few in any single sale you might otherwise attend. The almost certain advance in prices of even common brood sows this year will make it more desirable than ever to look over the pure-bred sales this winter with a view of making a start in a better grade of hogs. The scarcity of good breeding stock, with the cheap corn, means a great demand for hogs on the farm, and the time was never more favorable for a man to make a start in this direction. Cols. O. L. and A. L. Mossman will be the auctioneers. Ray L. Gribben of The Homestead will attend these sales and will handle bids you may send him strictly in your interest.

R. M. SKILLEN'S SECOND SALE OF DUROC JERSEY BRED SOWS

TO BE HELD AT FARM

Greene, Iowa, Monday, Feb. 10, 1913

40 HEAD of big, smooth two year olds, yearlings and gilts. There will be a good two-year-old sow by Kelly's Pilot Wonder (champion of Ohio, 1908), three by Waveland Ohio Chief, eleven fall yearling sows by Chuck's Model (a great son of Model Chief) and twenty-five gilts by Select Goods by Chief Select, Merfield's Wonder by Crimson Wonder Again, Waveland Ohio Chief by Ohio Chief and Chuck's Model. Their dams are by Kelly's Pilot Wonder, Waveland Ohio Chief and Adams Express. These sows are bred to Chuck's Model, Skillen's Col. Gano (a full brother to the noted sire and show boar, Col. Gano), Prince of Wonder by Crimson Wonder Again and a few to Advancer Chief by Model Advance. Write me for a catalog, mentioning The Homestead, and arrange to attend the sale. Send bids to Carlos C. Palmer, Homestead representative, in my care. N. G. Kraschel, auctioneer. Address

R. M. SKILLEN, - - GREENE, IOWA.

C. E. VEAK'S GREAT SALE

DUROC JERSEY SOWS

ESSEX, IOWA, FEBRUARY 4, 1913

40 HEAD. 25 TRIED SOWS, 15 CHOICE GILTS. 40

These are daughters of such noted boars as my great High Col., Select Chief, Cherry Prince, Proud Col. and Valley Chief 2d. These will be bred to my present great trio of boars, High Col. 2d, Cherry Prince and Crimson The Wonder. If you want a few really great sows, bred to some of the best herd boars today in the West, then come to my sale. Catalog now ready. Write for it at once and mention The Homestead. Address

DROZ, HANKS & BISHOP DUROC BRED SOW SALE

TO BE HELD AT GILBERT'S FEED BARN,

FAIRFIELD, IOWA, THURSDAY, FEB. 6, 1913

55--HEAD--55

I WILL sell thirty head of great sows, eight yearlings by The Professor, Golden Model II., Jack's Friend, Proud Col., Chief Protection, Col.'s Defender and Chief Select; nine fall yearling gilts by Proud Col. and thirteen gilts by Crimson Wonder I Am, Proud Col., Model Wonder and Advancer. All but one are bred to **Cherry Chief**, the sire of Cherry King, **Chief Select, The Chief's Col.** and many others. If you want to raise you a herd boar buy a sow bred to Cherry Chief.

J. C. DROZ, - FAIRFIELD, IOWA.

WE are selling twenty-five head, mostly gilts, one Model Chief sow, one fall sow by Instructor (grand champion Illinois, 1910), four gilts by Proud Col., four by Model Wonder (and one of them a corker), four by Proud Ohio Chief, one by Highland King (junior champion International Stock Show, 1910), and ten by Col. O. by Proud Col., dam by Ohio Chief II., ten are bred to Model Wonder, nine to Wonder Model (second Des Moines, 1912), and six to Proud Col. Our state fair winners are bred like these litters will be. Buy some of these sows and raise some prize winners yourself.

HANKS & BISHOP, - NEW LONDON, IOWA.

Write to either for catalog mentioning The Homestead. Send bids to Carlos C. Palmer, care Leggett Hotel, and they will be properly cared for. Auctioneers, Cols. N. G. Kraschel and H. S. Allen.

HORSES AND JACKS.

FRANK IAMS' DRAFT STALLIONS

are **"up to the minute"** and 10 years in advance. They are the **"drafty, big-boned type"—"nifty, big black boys"**—the **real "medal winners"**—sensational **"show and business horses"** of note, **"ripe peaches"** from the **select "400." Big, classy "peaches and cream" black boys."** The **"Iams brand"** of drafty **"top notchers."** Iams' **importation** of **Percheron** and **Belgian stallions** and **mares** are in the **"pink of condition"** and ready for a **"good selling." "Ikey boy,"** smile **sweetly,** and hundreds of Iams' satisfied customers **"will sit up and take notice"** that **Iams,** the **"king pin"** horse importer, is still **"doing business"** at the **"old stand." Iams** is **"pushing"** his horses to the front. The big **"peaches and cream"** "boys and girls" are **attractions** that can't be overlooked. Iams **mesmerizes** buyers with **"real drafters"** at **"bargain prices"** and having the **"horses as advertised."** Iams' **"competitors"** and **"hammer knockers"** are **"boosting** Iams" by their "knocks," until **now** he is **known** as the **"millionaire horseman,"** and on **"Easy Street,"** and growing fast. **Ikey, "come on along" and sing Iams' song.** He is selling these **"aristocratic," fancy "black boys" cheaper** than ever—or **better** horses **for less money—$1,000 and $1,400** (few little higher). Iams has

"Ikey Buyer," Bea "Wise Guy" —Buy **"Show Horses"** of Iams—who has crossed the Ocean **50 times** for horses and sold **4,444 Registered Horses, "Iams' 30 years of success"** make him a safe man to buy from at **Special Low Democratic Prices. "Everybody's Doin' It."**

100 PERCHERON AND BELGIAN STALLIONS AND MARES 100

They are **"models"—"humdingers."** They are 2 to 5 years old, weigh 1,700 to 2,500 pounds, 80 per cent blacks, 50 per cent ton horses. All **"registered," approved** and **inspected** by **governments** of **France** and U. S. and **certificates "stamped O. K."** All **"sound," "bell ringers" ("Iams' kind"—** need **no "state law"** to make **"them sound.")** Many **"prize winners"** and **"gold medal horses."** Big, **drafty "topnotchers,"** with big bone, quality, style, finish and **action to burn.** They are **"eye openers"**—larger and better horses than seen **elsewhere.** Big **"business propositons"** that make **"the wheels work fast"** under a **"buyer's hat." "Georgie, dear,"** Iams made a **"big killing"** by buying his horses in Europe in October, 1912. **"War scare," "dry weather,"** "bad crops," **"close money"** and **"Iams' cash"** caused the **"prize winners"** and **"tops"** to be thrown on the **market** for a **"good selling."—Iams "cut the melon"** and bought the **"rippers"** at **"knock-out prices." Iams** will give his customers the benefit of his **"good buy." "Ikey boy," "come on down town"**—see Iams—"Everybody is Doing It."

Get into Iams' "get rich wagon" and save $1,000 on a "top stallion"

(and you wear the diamonds). Iams is a **"big fly in the jelly"** in the horse world. "He keeps the gang guessing." **Iams** sells "imported horses only" —(they win 90 per cent of prizes at big horse shows). No **American-bred full bloods"**—no **"auction stuff"** or **"peddlers' horses"**—only **"choice drafters"** of **big size, bone, quality** and **finish. Iams** has the **"crack stallions** and **mares"** you **"read about."** Buy horses of **Iams** and you won't **"get stung"** in **horse** or **price. "Dolly D.,"** waltz me around **once** again, **"Ikey,"** land me at **Iams' box office** and **importing barns.** Full to "the roof" with **"black boys"** (and all must be sold). **Reduced prices.** All the world knows Iams and his **"peaches and cream" horses.** 1913 **promises** to be a **bumper** year to **Iams** and **his customers.** He saved **$300,000 to stallion buyers** in 1912. **Watch "Iams' smoke."** Iams' 30 years of **successful business** make him a **safe man** to do business with. **Iams sells horses "on honor."** A boy or a lady can buy as cheap as a man. **Iams' 1913 horse**

Catalog is an "eye opener." It has a "laugh" and a $1,000

bargain in every line. A **"bunch of gold"** to stallion and mare buyers. It is full of the real **"peaches and cream"** stallions. It is the **finest, most elaborate and original up-to-date horse book** in the world. Iams, the **"square deal" horseman,** makes every statement in **ad** or **catalog good**—or you get the $500 he **hangs up. Iams** guarantees to sell you a **better**

Imported Stallion at $1,000 and $1,400

(few higher) than are sold to **stock companies** for $4,000. Imported mares, $700 and $1,000. Iams gives **60 per cent** breeding guarantee; **pays freight** on horse and **fare** of one buyer. He can furnish $1,500 insurance. **Iams buys** and **sells every stallion himself. Saves buyers $1,000 in middlemen's profits.** He buys stallions by **"train load."** He speaks languages—(saving 20 per cent). He is **not** in the **"stallion trust."** No **partners** to share profits. He **"pays cash"** for his horses—and sells **"topnotchers"** by **"hot advertising"** and having **"the goods." "Big Ikey,"** leave your "happy" home and buy a **"top"** stallion or pair of **imported mares** (of **Iams**) that bring colts that sell at **$500 each. "Papa,"** don't let those **"auction men" "hand you a lemon"** in one of those **"so-called" "American full bloods"** of **questionable breeding.** Buy an **imported horse** of **Iams,** the **"reliable horseman."** (Then we will **"all wear diamonds."**) Iams' **"selling clothes" fit all buyers. Write for Iams' million-dollar horse catalog.** Iams won't let you go without a **peaches and cream** stallion or mare. **"He sells the horses quick."** Iams' guarantees are backed by **"half million dollars."** References—1st Nat'l and Omaha Nat'l Banks, Omaha; Packers Nat'l Bank, So. Omaha; Citizens State, 1st State and St. Paul State Banks, **St. Paul, Neb.** Iams buys big ad space because it is cheaper than flannel-mouthed horse salesmen.

VAN STEENBERGE'S DRAFTERS

40 HEAD Belgian and Percheron stallions now on hand. Imported and American bred to offer. New importation of big, heavy drafters just arrived.

A. M. VAN STEENBERGE, OGDEN, IOWA

FORD STOCK FARM

YOUR CHOICE of Imported Percheron and Belgian stallions at $100.00 profit, absolute first cost revealed in plain figures, the best money can buy, positive guarantee with every purchase. Correspondence, inspection and personal acquaintance solicited. INVESTIGATE.

FORD & HARRINGTON, Parker, So. Dak.

The POWER OF PERCHERONS

BIG crops emphasize the necessity for first-class horse power. Quicker trips to the elevator, with heavier loads, means **real money,** and during the approaching winter mares might just as well be carrying profitable Percheron fonls instead of inferior, light weight young. Write me for free bulletin C. It tells all.

Purchase Percherons

I O

The Iowa Homestead

VOL. LVIII. NO. 6 DES MOINES, IOWA, FEBRUARY 6, 1913. WHOLE NO. 2887.

Whose Word will you take?

A Car to Keep

You are going to buy **a car to keep,** if you're going to buy economically. And a car, on your roads, needs a sturdy foundation to carry its power and load for years, needs more than mere specifications and "looks."

Trained engineers can't tell by appearance what a car will do. They can't pre-judge materials any better than you, for the cheaper steels look the same as the costlier. They must analyze every piece of metal in a laboratory to know what that metal is, and will do.

A car seldom tells its story inside of a year. Then it fails or it lasts, according to what the maker puts into it.

You must buy your car on the material basis—on the unseen values—if you are to get a car to keep.

And you must take somebody's word for this quality until you have proved it out on the road.

The thousands of customers we deal with regularly know you can take our word.

For Seventy Years

For seventy years the J. I. Case Company—a $40,000,000 concern—has manufactured the finest machinery in its line. For 70 years men have been trying it and finding out its worth. Some of our customers have dealt with us steadily for more than 50 years. For seventy years the business has been operated on a close-margin policy. You know Case Products. You know how they last. You know, by results (you do or your friends do) the grade of materials we use.

Case Cars are made by the same company that has made this machinery for so long. They are made on the same close margin of profit. Don't you think, selling to the same people who use our machinery, we would use the best materials for the purpose throughout in **these cars?**

What We Don't Save

A car to be good today must be good for a lifetime if the buyer wants to keep it. City cars that run but a few thousand miles won't do on American roads.

We could make large savings on the cost of our motors by using cheaper materials.

We could save on our clutches, transmissions, drive shafts, wheels and other vital parts.

We could make large savings on axles if we used other than complete Timkens.

We use the same radiator that $5,000 cars employ.

We could cut our assembling cost in two and this cost is one of the greatest.

Extra Values Everywhere

No expense is too great, no method too irksome, to perfect every part in fit and in quality. For Case Automobiles, like all Case Machinery, must operate perfectly, and must last like a tractor with one-tenth of a tractor's weight.

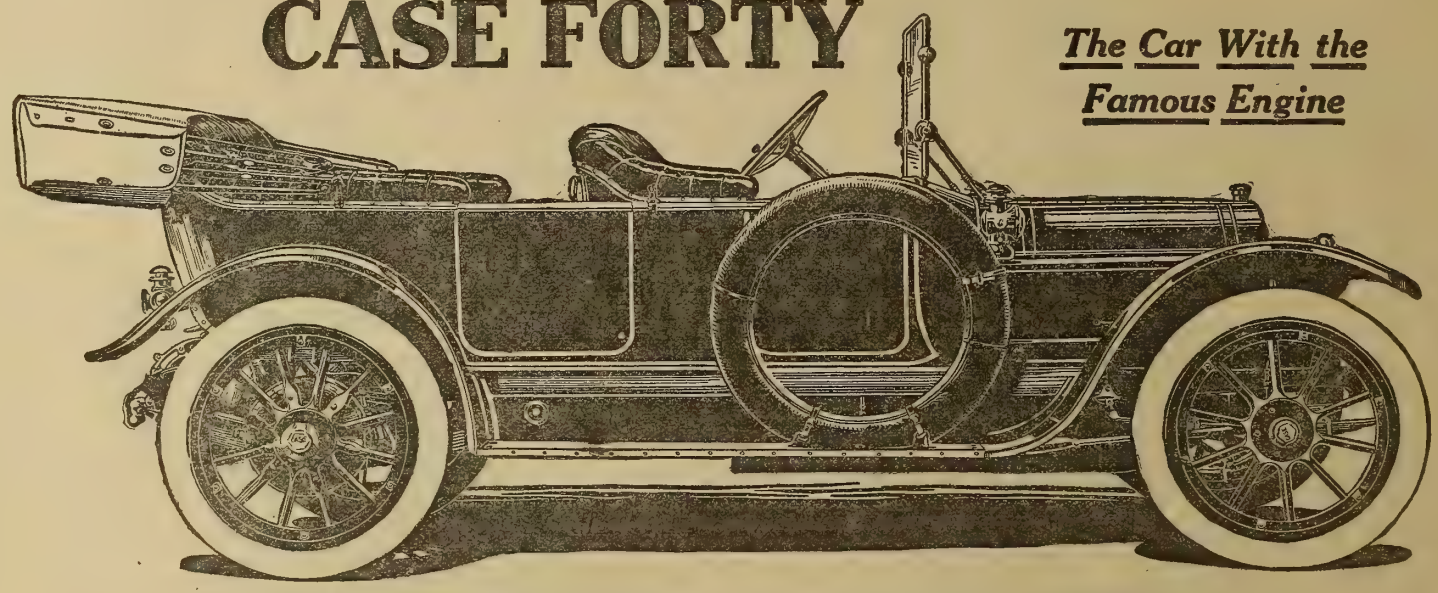
One must use the finest steels in existence to get both strength and lightness.

So we use this care and these better materials throughout the entire car.

No other car that we know, selling at anywhere near our price, uses such care and materials. No other can.

CASE FORTY

The Car With the Famous Engine



5-Passenger Touring, *Fully* Equipped, $2,200

Westinghouse Electric Starter and Electric Lighting Outfit for all Lamps; Side and Tail Lamps, Combination Oil and Electric; Warner Autometer; Electric Horn; Rain Vision Ventilating Wind Shield; Mohair Top, Side Curtains and Cover; 37x4½-inch Tires; Firestone Demountable Rims; 124-inch Wheel Base; Three-Quarter Elliptic Springs; 4½x5¼-Inch Cylinders; Brown-Lipe Transmission; Timken Full Floating Axle; Rayfield Carburetor with Dash Adjustment; Bosch Magneto, Dual System Single Point Ignition. The usual Tools, Tire Repair Kit, Jack, etc. ***And in addition Extra Tire and Tube on Rim, Extra Tube separate, Tire Chains, Tire Cover and Handy Work Light on long wire.***

The Reason

No maker of automobiles alone could effect our manufacturing savings, for we didn't have to create a new business.

We added practically nothing to our selling expense. We had all our agents before a car was turned out. We added no salaries for officers, sales manager, advertising department, office rent or other overhead charges.

We need only reasonable profits. Our system, built up through seventy years, permits us to pare them down to the minimum, to effect great factory economies.

It allows us to put all this into the car, to put better things in a Forty than ever went into a Forty before.

You get the benefit of these savings.

They pay us no money, save that which "goodwill" brings to a firm that obtains it.

They pay you, through better materials, in upkeep, repair bills, and in the cost of new cars every year.

Don't you think them worth while?

Go to a Case Branch or one of our 10,000 dealers and see this new Forty. Ask to ride in it. See how it runs. Note its style and equipment. See also the Case Thirty at $1,500.

Send the coupon for letters from owners that tell their experiences, and the Case Catalog describing the Case Forty and the Case Thirty in detail.

No other cars in the world are so ideally built for years of service on American roads.

J. I. Case T. M. Co., Inc.
621 State Street, Racine, Wis.

Methods That Make Poultry More Profitable

An Outline of the Quickest and Surest Method of Adding to the Profits of the Poultry Raiser by the Simple Process of Grading Eggs.—*By Wm. A. Lippincott, Kansas Agricultural College.*

THERE are two ways of earning more money with farm poultry than is now realized. One is by securing higher producing stock; the other is by marketing the products already produced, to better advantage. To secure the highest possible profit from farm poultry, both ways should be combined. The second way, however, will bring much quicker returns, though not necessarily surer returns than the first. Most poultry products purchased from the farmer in the central West are bought on the flat price or average price basis. Chickens are graded into hens, roosters and springs, but no difference is made between good hens, poor hens, or "A No. 1" springs, and those that are not so good.

Most of the eggs are purchased on the so-called case-count basis. This means that the buyer guesses at the number of bad eggs, of second-class and first-class eggs he is likely to get and fixes the price accordingly. Every one who offers eggs for sale, whether good, bad or indifferent, is paid the same price. Such a basis of buying is fundamentally wrong, no matter what the product. It is wrong for two reasons. In the first place, the man who produces good goods doubtless feels that the man who produces poor goods is paid money which he should have, for it is the careful and conscientious farmer who bears the burden and who pays for his thriftless neighbor's lack of care. In the second place, it is wrong because it is impossible to get a general improvement in poultry products for market purposes until there is a financial incentive for such improvement. At the great stock yards in Chicago and Kansas City we often hear that "such and such a load of steers or car of hogs topped the market." This is possible because the better the beef the richer are the returns. With eggs and poultry this is not so.

In introducing the system of buying on a quality basis it is probable that eggs offer the point of least resistance. It is comparatively easy to grade eggs according to their quality into first-class eggs, second-class eggs, and eggs that are not fit for human food. One buyer in a small town in the middle West who tried out the method of paying "a quality price for quality eggs" had the following experience: On the last day of May he was paying fourteen cents a dozen for the eggs he bought from the farmers. On the first day of June, he began paying fifteen and one-half cents a dozen for first-class eggs, and thirteen and one-half cents for second-class eggs. Eggs that were not fit for consumption were returned to the people who brought them in. It so happened that the average market price remained the same for the next four weeks, so that his price remained at fifteen and one-half and thirteen and one-half cents. At the end of the first month instead of paying an average price of fourteen cents, his eggs were costing him a shade over fifteen cents. This was because of two things. In the first place, his price of fourteen cents was about one-fourth cent below what he should have paid as an average price. He can hardly be blamed for this, however, because it is natural when a man is guessing at the loss he is likely to sustain, in buying on the case-count basis, that he should guess in his own favor. In the second place, as soon as there is a financial incentive the farmer begins to keep the small, dirty and doubtful eggs at home, and to bring the eggs that are large and clean and that he knows are fresh.

In this way the quality of the eggs which this man bought were improved so much that it brought up the price nearly three-fourths cent. The good farmers were better satisfied and the dealer was better satisfied, the former because they were receiving better prices for their goods, the latter, because he was getting better goods. While they cost him more he could market them to better advantage.

There are two reasons why the quality buying of eggs has not been adopted more widely than it has. The first is, that because it is something rather new it is distrusted by the farmers. This distrust is taken advantage of by unscrupulous buyers who may be the competitors of the persons who are trying to put on a grade basis, to such an extent that very often the person who starts to buy on a grade basis cannot get a large enough volume of eggs with which to carry on his business. The second reason is, that sometimes egg buyers are dishonest in their dealings with farmers, and the farmers feel that they do not get an honest return for their goods.

I see no reason why this matter cannot be handled on the same basis as the cream buying is being handled by several of the progressive western states. I believe that the matter should be put under state control, and that before being allowed to buy eggs a person should be compelled to demonstrate that he knows how to buy eggs on a graded basis, just as he must now pass an examination to show that he knows how to test cream. And furthermore, having secured a permit from the state to buy eggs, he must buy them honestly or else have his permit or license taken away from him. Such a system has not been found perfect in buying cream, but it has been found to bring about such a marked improvement in conditions as to be considered entirely worth while.

Later the same system could be applied to the buying of poultry. It has been found by investigations carried on in the central West by the United States government that 42 per cent, or nearly half of the hot-weather loss in eggs, is eliminated when infertile eggs are produced. Eggs produced from flocks of hens or pullets that are not mated with a male bird stand shipment better, stand the hot weather better, and in fact almost every kind of condition that brings about deterioration in eggs.

In a great many cases, however, it will be impossible for farmers to produce infertile eggs until there are laws on the statute books making it a misdemeanor for male birds of all lines of domestic poultry to run at large. The question of

THE HOMESTEAD

A PRACTICAL JOURNAL for the FARMER, STOCKMAN, FRUIT GROWER, POULTRYMAN, GARDENER, and HOUSEKEEPER

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1855

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 30 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.25; ten years in advance, $4.00. Subscription price in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address all letters to

THE HOMESTEAD COMPANY,
Des Moines, Iowa.

A PERSONAL STATEMENT.

On Monday of this week, at four o'clock in the morning, fire broke out in the plant of The Iowa Homestead. Five hours later the building had been completely gutted, the intricate and expensive machinery with which the mechanical departments were equipped stood enshrouded in ice, ruined to the extent of many, many thousands of dollars. With daylight came the realization that one of the most severe blows received in a third of a century of active newspaper work had been administered suddenly, without a moment's warning. Accompanied by members of my family I watched the flames wreak their destruction, despite the most heroic efforts on the part of the brave firemen. At the hour of this writing (Monday noon) the scene is a desolate one, but hope is rising triumphant over the despair of the early morning hours and order is beginning to twinkle dimly where only chaos was apparent before.

Already, I am able to inform my subscribers and friends, plans are under way which will mean a larger and finer Homestead plant, one which shall be in keeping with the magnitude of the business which we have attained by the painstaking, conscientious work of a third of a century. But in the meantime, for the ensuing two or three weeks, during which the multitudinous details of clearing away the debris and bringing order out of chaos will occupy not only every moment of my own time, but also that of every one of the Homestead employes, there must of necessity be the patient co-operation of my subscribers, patrons and friends if this dream of a re-built and enlarged plant is to come true. With the most sincere thanks for past favors and courtesies and pledging every ounce of my undaunted strength for the future, I am obliged to ask of every friend and patron the patience and assistance without which no man or business can recover from the staggering blow administered by the flames today.

The fire comes at the busiest season of the entire year. Our advertising, subscription and editorial departments were never busier than they were last week. I had planned to issue a paper this week which should establish a new record for myself and set the pace for my competitors. Of a sudden, my plans are knocked in the head. But the delay will be only temporary. Quarters have already been established where the various departments will work to undo the injury and damage wrought in the past few hours. Newspaper friends have offered every assistance possible. For the ensuing two or three weeks I shall avail myself of these kind offers and use the typesetting and electrotyping machines of other plants for the composition work of The Homestead, until our own mechanical departments can be put in order again and we can return to our own composing room, better equipped then ever before.

Should there be delay in receiving the paper, or should minor errors, either of omission or commission, creep into the paper during these trying weeks of reorganization I humbly beg the patient indulgence of my readers and patrons. Order will be established as rapidly as human hands can bring it about, for although temporarily crushed the spirit which has brought The Homestead to its present high and commanding position is as indomitable as ever.

With the flames still licking their way through the building and with cascades of water flowing from floor to floor (while a cold wintry wind adds to the bleakness of the scene and the discomfort of those who silently watch the work of destruction) I can only write these few words and request of every subscriber that he be patient if his paper is a few days late; of every advertiser that he bear in mind the disadvantages under which we labor in the production of a paper which shall herald his wares or offerings to the farmers of the grain belt; of all my numerous friends, here at home and elsewhere, that they give me the benefit of their well wishes and cheering support until the trying days of reorganization are at an end.

With renewed assurances of appreciation to those who help me bear the staggering blow by being patient with the temporarily disabled service, and of determination to devote every minute of time and every ounce of energy to repairing the loss as quickly as possible, I remain

Most sincerely yours,
JAMES M. PIERCE,
Publisher The Iowa Homestead.

THE EFFECT OF GRADING GRAIN

It is possible to wear a subject threadbare, to nag readers until they weary of good advice. We are reminded of this as we take up the topic found at the head of this article. Possibly our readers will bear with us if we promise here and now that we have some new facts to offer in regard to the effect of grading grain on the yield.

The facts we refer to have been worked out by Prof. C. A. Zavitz, director of the Ontario Experiment Station. For eight years in succession this scientist tested the relative yielding ability of heavy seed, small, plump seed and seed of medium size and weight. The heavy seed in this case represented the type of grain that would result from a thorough system of grading. In the case of oats the average yield of the heavy grain for an eight-year period was sixty-two bushels per acre, while the medium-sized seed yielded 54.1 bushels per acre and the small seed 46.6 bushels. Here was a gain of practically eight bushels per acre as between good seed and seed of medium quality. It should be borne in mind that in these experiments the same number of grains were used in each instance so that the error which so commonly creeps into investigations of this kind was eliminated.

Whether we regard this subject as threadbare or not we cannot deny the fact that an extra eight bushels per acre would in the majority of cases throughout the corn belt make a difference between profit and loss in oat growing. The average man uses small grain for two purposes: In the first place, to rotate his land and, in the second place, to obtain a stand of grass seed and little more is expected from oats than that they will cover the cost of the seed and labor. If in addition to this we could obtain an eight-bushel profit the labor involved in grading the seed would be covered by the increase from a very few acres.

Commenting on the results of his investigation so far, Professor Zavitz says:

From a practical standpoint it seems to be excellent practice, not only to sow clean seed grain that will be free from weed seeds, but to have the cleaning so thoroughly done that none but the very best seed is secured. When this practice is carried out an important step has been made towards the obtaining of high yields of grain of superior quality.

It should be clearly understood that in this experiment exactly the same number of seeds were used in the different plots. The experiment, therefore, deals with numbers of seed rather than exact quantites of seed used on given areas of land. The results indicate in a very marked degree, however, that the large, plump seeds will produce larger, more vigorous and more productive plants than seeds of the other selections included in the experiment under discussion.

While we gave only the results of experimentation with oats it may be added that similar returns were obtained in the case of spring wheat, winter wheat, barley and peas. In each case the returns from the heavy seed were more than sufficient to justify the expense involved in grading. The Nor'-West Farmer speaking in the interest of the wheat growers of the great Northwest, says that the yield of wheat can be increased from 5 to 20 per cent if attention is given to the selection of the seed. The fanning mill is an efficient machine for selecting seed; it removes not only the small and shrunken kernels, but also many of the obnoxious weed seeds. Therefore, its purchase is the best investment a farmer can make. All seed grain should be carefully run through the machine in the winter months when there is practically nothing else to do. Under no consideration should this important part of the farm operations lie postponed till seeding time. The hustle and bustle at that time of the year will either result in a poor job being made or else in its entire neglect.

THE PLEASURES OF TOWN LIFE.

In these days of Chautauquas, institutes, short courses and neighborhood clubs, when the farmer is repeatedly told that he is just beginning to realize the social possibilities of farm life, it will not do to forget that yesterday had its rural amusements, different from those which are the vogue today, but none the less enjoyable. What, for instance, among the club and institute and Chautauqua pleasures of today can surpass the joys of the husking bee, as so vividly told in the novel of Kansas and Missouri life recently published under the title of "Madison Hood:"

The sun rises on a crisp, frosty morning and for miles around is heard the rattle of numerous farm wagons of the neighborhood, and the song, the whistle and the cheer of the lusty farmer boys frolicking in the empty wagon boxes, while the teams are urged along to some particular neighbor's field of ripened corn, which is to be husked and cribbed in a single day. With a whoop and hurrah the strife begins and the battle of the husks is on—and lasts till the sun goes down. All day long the wagons, heaped high with ears of yellow corn, are driven to the cribs, where the corn is thrown in with scoop shovels. The night comes on; the field is finished, and the tireless hands that tugged and wrestled with husks and ears, and the faces covered with dust from the blades, are washed in tin pans in the back yard, and dried with long towels made of gunny sacks, half a dozen rollicking men hanging to one and the same towel. Supper has been prepared with the aid of a dozen of the buxom neighbor girls. Turkey and "taters," pumpkin pies, ginger bread and homemade molasses are ravenously disposed of, while many a jest and joke and turn goes around, and the blush and smile break out upon the face of the jealous swain.

The supper is over, the floor is cleared, and the country fiddler takes his place and pats the time with his cowhide boot to the tune of "Leather Breeches," "The Raccoon Tail Am Ringed All Round," or "She's a Hole in Her Stockin', But Her Heel Keeps a-Rockin," and a dozen others equally inspiring. The square dance is on in all its glory; "Swing the Girl Behind You!" "Add a Man Left and Promenade All."

The older heads are seated near the fireplace, peeling apples, drinking cider and telling stories, and even some of them can scarcely hold their heels when the Virginia reel is called. The wee small hours have come; the hickery backlog is burning low, the tallow candles have been snuffed and snuffed, and the dance is over.

The wagon boxes that hauled the corn are now filled with straw and the girls and boys scramble in, using the spokes of the wheels as steps, being careful not to soil their clothes with axle grease; again the noise of the rumbling and rattling over frozen ground breaks the stillness of the night, and the youngsters hie away, singing:

"We won't go home till morning,
We won't go home till morning;
We'll dance all night,
Till broad daylight,
And go home with the girls in the morning."

The youngsters of today can only appreciate such a scene in fancy, but there are thousands of our older readers who will find their pulses quickening as they recall the husking bee, spelling schools, taffy pullings and apple parings of their youthful days by reading this description. A great many sociologists are covering a great many sheets of paper nowadays telling how the farmer is emerging from a sort of chrysalis stage of life which had few or no amusements and few or no comforts, as though farm life heretofore had been a kind of hibernation and the awakening was only just coming. It is true that never before were farmers so prosperous, never before were material comforts so roseate, but this should not blind us to the fact that ever since the first plowshare was first sunk into the virgin earth the tiller of the soil has had his pleasures and his rewards commensurate with his toil. It will not do to spend all our life looking forward to good times; they have existed in the past and are in existence now. No period has any monopoly on pleasures or enjoyments, and the farmer has had his satisfying diversions in the past every bit as much as now.

LEGUME FOR SANDY SOIL.

A subscriber living on the Missouri river bottoms, just north of Omaha, is renting a farm from year to year, and wishes to find some legume that may be sowed or planted, from one season to another, that will make good feed for his herd of dairy cows and that will also prove of benefit to the soil.

The locality in which our subscriber lives is almost too far north to succeed in greatest measure with cowpeas, or we would recommend that he plant or sow them. The cowpeas, however, are a more southern crop, and we fear they would not do as well there as something else, as, for instance, Canada peas. If advisable to sow oats on the sandy soil which our subscriber farms, we would most certainly try a mixture of oats and Canada peas, which are very much more hardy than the cowpea, in fact it is suited to a northern climate, while the cowpea is suited to a southern climate. A mixture of about a bushel and a half of oats to the acre and the same amount of Canada peas, would make a very heavy growth of excellent forage and it would make a good feed for dairy cows. The reason we advise oats with the peas is to give the pea vines a support, to hold them off the ground. An oat that grows a heavy, stiff straw would be preferable on this account. It will be found, in an ordinary season, that this mixture will give a heavy yield of hay to the acre, and it will be a hay that will bring milk when fed to good cows. The soil will also be benefited to some extent by growing the pea crop, which is of leguminous nature.

We would advise sowing this mixture from two to three weeks later than the usual time of oat sowing, as a ranker growth will be secured from a sowing made a trifle late, especially of the peas, than where sown early.

Education in the public schools and especially in the country schools, is in the hands mainly of unskilled instructors, according to a bulletin issued by the bureau of education as the result of an investigation made by two of its experts. Not more than one in every five teachers, the investigation disclosed, had been graduated from a teachers' training school. The conditions were depressing, the investigators declare, and the report is pessimistic in tone.

Studebaker

How Studebaker Automobiles Are Made

A Heart-to-Heart Story. No. 1

BECAUSE farmers are acquainted with machinery, we have decided upon an entirely new kind of farm paper advertising.

We shall run a series of articles in 28 of the best farm papers in the United States reaching upwards of 2,700,000 farmer subscribers. How many readers that will mean you can judge better than we. The first and greatest problem of all automobile manufacture is simply this: How to produce the best car for a low price.

Now, there is just one way known to man by which this question can be answered, and that is: By building so large a number of cars that the manufacturer can afford the machinery necessary to build cars in the best manner possible.

This is what is known as modern Quantity and Quality Production.

Let us stop here a moment and make it clear. Most manufacturers of automobiles are "assemblers," not real manufacturers. They buy a motor from one parts manufacturer, a transmission from another, a rear axle from another and then put the parts together to make a car. Naturally they have to pay a good profit to the parts manufacturers and then resell to the buyer at another profit. When they are done they may have produced a pretty good car, but—and this is the point—it is bound to cost the buyer several hundred dollars more than it would cost if the manufacturer made the whole car himself.

Remember two things here:

One: No matter what price you pay you never get more than you pay for.

Two: Every high priced car and every assembled car could be sold at from three-quarters to three-fifths of its present price if the manufacturer really made all his own car and if that car were built in quantities upwards of 20,000 cars annually.

This brings us to the Studebaker method:

We manufacture Studebaker automobiles from top to tread in our own factories, which cover 40 acres of floor space. And we are building 50,000 cars this year.

(The only exceptions to our own manufacture are tires, lamps, magneto and one or two similar parts, which no automobile manufacturer ought to build.)

For these two reasons, and these alone, we are able to sell cars at $885.00, $1,290.00 and $1,550.00 which cannot be equalled by other cars at an average of $500.00 higher price.

We start with the raw material, chiefly bar steel and pig iron.

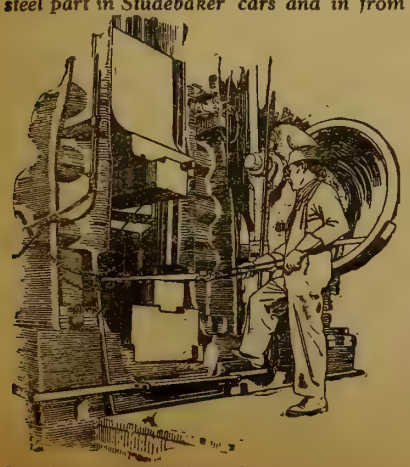
This raw material begins its long journey of many processes and many weeks of time towards the finished car, thru three or four main opening channels in our factory.

1. THE FORGE SHOP. *Forty great hammers working on white hot steel.*

2. THE FOUNDRY. *A huge building where molten pig iron is poured into moulds almost as carefully constructed as for precious metal work.*

3. THE STEEL STAMPING MILL. *Huge presses take steel plates of different gauge thickness and under many tons pressure stamp them into form.*

4. THE HEAT TREATING PLANT. *Forty deep ovens at glowing heat take every vital steel part in Studebaker cars and in from three to six separate treatments make it hard and tough.*



Forging a Front Axle in 4,000-lb. Drop Forge.

No man, least of all a farmer who is accustomed to tilling the soil and getting back to first principles, can stand before these immense glowing gateways of Studebaker manufacture and not be stirred with the thought that here things are genuine and what they seem. Who can see a four-ton drop-forge hammer seize a hot square bar of steel and fashion it into form with blows now gentle, now awe-inspiring, without feeling the power and skill which control such forces.

Yet first we must go one step back of this to a quiet place of study and diligent experiment—our laboratories.

Here are highly trained specialists working over a microscope or adjusting a spring-testing machine, or watching a liquid change color in the chemical laboratories. It is such a scene as you would witness in the best universities, and no university has better equipment.

Yet the word of these men who are so far removed from the din of the forge shop and stamping mill make the law of our factories.

What material we shall use they specify.

Our laboratory experts tell the Pittsburgh steel mills what kinds of iron and steel we will use for the different parts and the mills make the steel and iron as we specify.

But we go further and will not accept a single shipment until the laboratories have tested it and found that it is in accordance with our formulas.

Pouring Moulten Iron in Studebaker Foundry.

In other words, our laboratories tell us to the thousandth part of one per cent what our steel is made of and what it will do under any given conditions.

Let us now turn for a moment and speak of steels themselves.

You have heard and read often of Krupp, chrome, nickel, vanadium, manganese and other kinds of steel alloys. You have been told that this or that steel is "specially heat treated." Unless you were an expert these terms have been meaningless—even if you were an expert you wouldn't be real sure just which steel was best suited for each particular part unless you knew the amount and kind of strain that each particular part is subjected to.

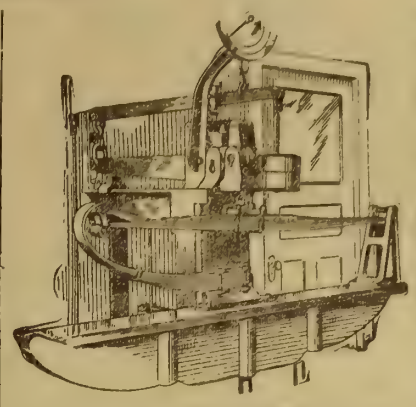
But when the Studebaker engineers design a car they know by mathematics the "strains and stresses" to which each part is to be subjected, just as a bridge-builder knows what strains or stresses will fall upon each part of his structure. The automobile engineer, however, is called upon not only to provide a part strong enough, but also to provide it light and compact enough to simplify design and keep the weight of his car down.

Remember this next time you ask a salesman the weight of his car and remember also that in the Studebaker factories the engineer works with the scientist.

Now we have already spoken of heat treating, and as heat treating finally determines the quality of all steels, we shall describe it further:

Remember that heat treating means to steel about what baking does to bread. To say "this steel is heat treated" is a good deal like saying "this bread is baked." But just as other things are important about bread, so also with steel. The kind of stuff in it, the way it is baked, the temperature, the oven, the brown it gets on the crust, all these things are important in steel, as well as in bread.

The scientists in Studebaker laboratories are specialized experts in steel. They know steel as a good baker knows bread. The baker strives to get a fine, even white grain to the inside of his loaf; the steel expert under a microscope, which magnifies 1,000 diameters, studies the grain of the steel. He watches the effects of great pressures exerted at high temperatures or the changes in structure brought about by "tempering."



Spring Testing Machine Which Bends and Releases Spring Many Times a Second, for Days at a Time.

In order to get just the right "temper" he chills the glowing metals in oil, water or brine, as may best give him the desired result.

By varying the heat treating according to temperature and using the right kind of "tempering" he adds to or diminishes the amount of carbon, chromium, nickel or other materials in the steel by precisely the right amount for a gear, a crank shaft, an axle, or spring. The springs, for example, are "tempered" in oil and because this is a delicate process it takes from three to six operations.

Do you begin to see how thoro Studebaker manufacture is?

Steel is usually hard or soft, according to the amount of carbon in it. Nickel makes it very tough and highly resistant to twisting strain. Chromium adds both to toughness and hardness.

Supposing, then, we are making an axle shaft which must turn its rear wheel over 30,000 to 100,000 miles of road in its day. It must travel a long road which knows many bumps, terrific jars, strains in mud, sand and steep grades, and it must not break. For this shaft we take the tough, resistant nickel steel and heat treat it until it just suits the purpose.

Or we may be studying a driving gear. This must be glass-hard to resist wear. It dare not be brittle or the teeth would fly into a thousand chips. By proper heat treatments we provide for all this.

Then there is the steering knuckle, which must not fail, and a thousand other parts, each of which will be subjected to a different kind of wear or strain and each of which must be unfailing in the performance of its task. So every Studebaker part is carefully studied, designed right and manufactured as carefully as if on it alone hung the honor of the Studebaker organization.

And now that the Studebaker laboratory experts have told us what steels shall be used at every point in the car, suppose we turn again to those three main channels thru which the steel is admitted to Studebaker manufacture.

First the drop-forging. A drop-forge is really the old blacksmith's forge grown to gigantic size with hammers of thousands of pounds of weight. The steel comes in a long bar, which is first put in a giant shears that clip it off as neatly as the housewife snips her thread.

The bar is heated glowing hot and if it is to be a crank shaft, for example, the first forge drives it into the mere rough form of the finished piece. Let no one think this is a little thing, for the pounding produces an indescribable roar and the earth all around is shaken.

The partly formed shaft is then heated once more and another hammer takes its turn. The particles of white-hot steel are driven together as closely as particles of glass in a piece of crystal. Then a third forge takes up the work and the steel takes more and more definitely the shape it will finally bear. Yet there are 24 operations still to come on this piece before it is finished.

After the forging the shaft is stacked away for six weeks to age and let the particles of steel shrink and adjust themselves to the tremendous pounding they have received in the forge.

Later it is rough ground and then machined several times and always by Studebaker workmen in Studebaker shops—until it is close to its final shape and size.

Then it is straightened, trued, inspected and made ready for the grinding which begins to give it the velvet smoothness of the finished shaft.

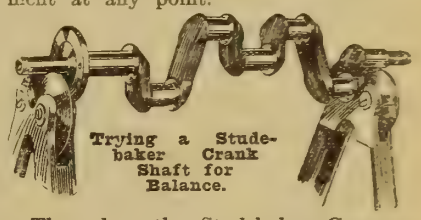
Right here it is again heat treated, baked for hours and pure carbon literally roasted into the surface of it, and when it comes out the surface is a high carbon steel, very hard, and so fine grained that it will wear glass smooth on its bearing surface.

Again it is heat treated to bring out the true temper of its nickel steel core, which must be tougher than the side of a battleship.

Even now nearly a dozen operations remain before it is ready.

These consist in grinding, truing straightening and inspecting.

The truing of the shaft to balance is almost as delicate an operation as the truing of a balance wheel of a watch. It is accomplished by placing the shaft on ball-bearing castors with knife edges and allowing it to swing free. If any part of the shaft is heavier than another it turns to the lowest point. This heavy part is ground away until at last it is finished true and even and when placed on the castors will center without movement at any point.



Trying a Studebaker Crank Shaft for Balance.

Thus does the Studebaker Corporation take the most minute care that every part in Studebaker cars is true and right. We balance crank shafts to avoid vibration, we straighten and true cam shafts to insure correct timing of the valves within one one-hundredth of a second and every part of Studebaker cars bear the same intense scrutiny and skillful watchfulness. Better cars cannot be built.

Yet such are the economies of our immense and thoro going equipment that Studebaker automobiles are far and away the biggest values the world has ever seen.

In the next issue this heart-to-heart Studebaker story will be continued in the same way, going further into the manufacture of Studebaker cars. We hope you will be looking for it.

The limits of space have not permitted us to go into many other interesting points of iron casting, steel stamping, etc., but we have told much more about these things in what we call the Studebaker Proof Book—a book designed to prove the quality of the Studebaker cars. Whatever your automobile preference, you ought to have this book. It is free—send for it on the coupon below.

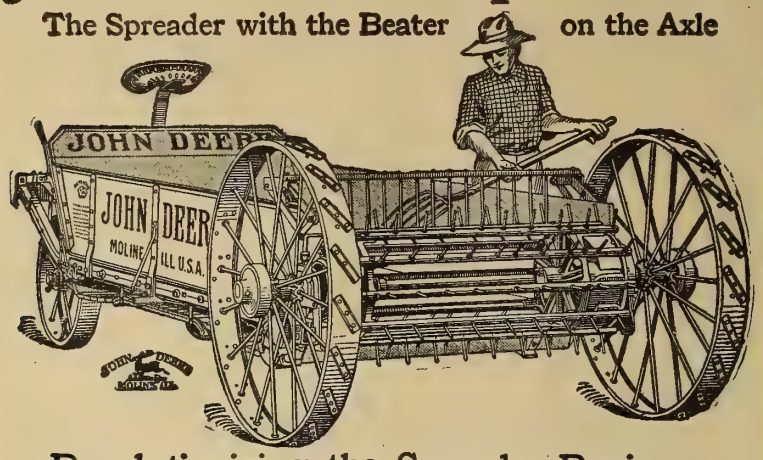
John Deere Spreader

The Spreader with the Beater on the Axle



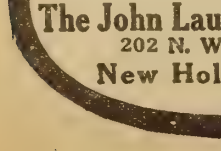
Revolutionizing the Spreader Business

Simplest and Strongest Spreader

On the John Deere Spreader, the Spreader with the Beater on the Axle, two hundred working parts that continually give trouble, are done away with. This spreader is so simple and strong that it does not get out of order. It has no clutches, no chains, no adjustments.

The John Deere Spreader is the greatest improvement in spreaders since their invention. It is as much in advance of ordinary spreaders as the self-binder was over the old reaper.

The Beater on the Axle



The Beater on the Axle

Mounting the beater on the axle makes the John Deere Spreader possible. This feature is fully patented. You can not get it on any other spreader. The beater on the axle does away with all chains and clutches. It puts the strain and stress of spreading on the main axle—where it belongs—not on the sides of the box or the frame of the spreader.

Mounting the beater on the axle makes the John Deere Spreader easy to load—low down.

Only "Hip-High"

Easy to Load

Sides of the John Deere Spreaders are only "hip-high." The first three feet you lift a fork of manure are easiest of all. From there on to the top of the ordinary spreader is hard work.

You lift manure only three feet with the John Deere Spreader. You always see into the spreader, just where each forkful is needed. Wheels do not interfere with loading.

Few Parts

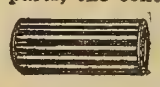
There are no clutches to get out of order, no chains to give trouble, and no adjustments to be made on the John Deere Spreader. On old style spreaders, ten to twenty adjustments are necessary before they will work at all. Any one of these, wrongly made, might put the spreader out of business.

Out of Gear

To start spreading with a John Deere Spreader, move the lever at the driver's right back until the finger or dog meets the large stop at the rear of the machine—there is no clutch.

The John Deere Spreader does not get out of order. It is always ready for use.

Roller Bearings



Roller Bearing

Roller bearings, few working parts, the center of the load comparatively near the team and the weight distributed over four wheels, make the John Deere Spreader light draft. There are four sets of roller bearings, two between the main axle and the beater, and two in the front wheels.

Bridge-Like Construction

Built Like a Steel Bridge

The substantial steel frame on John Deere Spreaders has high-carbon structural steel side sills. Like modern railway bridges it is built on the best known principles of steel construction.

It is securely bolted, insuring rigidity and perfect alignment, even after years of use.

Valuable Spreader Book Free—Get this book at once. It contains reasons for using manure—how to apply it to the land, how to store it, and a description of the John Deere Spreader, the Spreader with the Beater on the Axle. Ask us for this book as Package No. Y 27

John Deere Plow Co., Moline, Illinois

Must Suit You

Satisfaction Guaranteed—no catches nor technicalities in our guarantee. Your engine must satisfy *you* or you don't keep it. "Your good will means our success." That's the principal that built our business.

LAUSON FROST KING

Gasoline Engines

have the new Lauson Gear-Driven Magneto, which eliminates all batteries. Built into the engine—won't wear out. Throws a big, hot spark that never weakens. *Starts Easily.*—The Frost King starts on the magneto without turning over. Requires no cranking. Positively frost proof. Low fuel consumption—high efficiency. Case-hardened and ground wearing parts practically eliminates wear and breakage. *Write for catalog* stating power required and name of Lauson dealer.

FARM FURROWS

TURNED BY A PRACTICAL FARMER

A small gasoline engine is a pretty good hired man. He will turn the fanning mill and the grindstone, pump water when the wind is taking a vacation and is not at all too proud to run the washing machine and clothes wringer. Turning the sausage grinder is play to him and all he asks for his work is his board and he never eats excepts when he is working, but it must be admitted that he is rather particular about his food.

Cattle can live a long time without salt, but if they are to do their best it should be within their reach at all times.

It is being found that unless corn is husked rather clean, it will sometimes spoil in the crib just beneath the inlet of the crib elevator. These elevators are a great thing to save labor in unloading corn, but too much trash in the corn falls in one place and the corn in that spot is quite likely to mold. The remedy is to husk the corn cleaner.

There are a whole lot of folks trying to get rich these days by speculation. Somehow, I find myself believing that it is this class of people who are making so much fuss about getting cheaper credit, likewise more of it. The man who is honest and wishes credit for a sound business investment, can get it cheap, now.

A market report of forty years ago tells of prairie chickens selling for ten cents apiece; corn twenty-three cents a bushel and oats nineteen. Beef and pork were low in proportion. The high cost of living didn't cut much figure then, but who would be willing to go back to those old low prices? City folks now realize that when farmers are getting low prices for their produce all business suffers accordingly.

One or two "figure four" traps kept set in the orchard and around the truck patches will do wonders towards keeping the rabbit population in check. A dozen rabbits will do a great amount of injury around the truck patches during the course of the winter and spring.

Every farmer feeding stock in any amounts should arm himself with a good set of scales. Stock buyers do not try to short-weigh the stock that comes from the farm where scales tell the story. This protection is worth a good deal, sometimes, no doubt.

The way parcel post has started off is a surprise to all. Printing presses can hardly keep up the supply of stamps. As use still further perfects it it will become even more popular. It is being predicted that in ten years there will be no express companies. Vividly remembering the charge once made me by an express company for carrying a small repair casting—twice more than the company making the repair charged for it—I shall not weep if there are no express companies left as soon as next year.

A stalk cutter is a hard critter to ride anyhow, but if the ground is frozen a little it is all the more so; likewise, it is as much again harder on the cutter. A good way to "booger" up a stalk cutter is to use it when there is frost in the ground.

February is a short and sometimes an ugly month. The weather is usually such that one is glad it is the shortest month in the year. The second day of February, according to the old line of rhyme, marks the middle of the dry feeding season. Will you have half your feed left on that day?

Some folks' idea of co-operation is to make the other fellow provide for them.

The hired man who can haul manure in which there is a liberal amount of cornstalks without resorting to the language of the trooper has been properly trained at home. If the corn fodder is shredded there is no extra work in hauling manure and the bedding problem is solved.

Kerosene and gasoline make splendid fuel for summer cooking and where wood must be bought and hauled a long distance the cost is usually in their favor. The gasoline engine and circle saw would have saved a whole lot of hard work in cutting up wood if they had come into common use a few years sooner.

There is no risk in running in debt for tiling providing an outlet can be had and a decent job is done in digging the trenches and laying the tile. Many a man has made the mistake of buying more land when the money would have been better invested in draining the idle acres on the home farm.

The law that compels the township to pay the tuition of pupils that have finished the eighth grade if they wish to attend the city high schools will bring the high school to the country. If it does, let us hope that it will be a school that will train the boys and girls to see the real value of farm life.

Farmers are proverbially honest, but it would be rather awkward for some of them if they should be called upon to deal with the insurance adjuster and the assessor at the same time.

FARM CUSHMAN

The High Power Engine for All Farm Work

Take it wherever you have use for it—it weighs less than 200 pounds.

Catalog Free.

4 Full Horse Power

Pulls more than rated power. 4-cycle automatic throttle governor. Fuel consumed is proportioned to work—no waste. Easy to move and handle, easy speed change, fits in any place, simple, dependable. Up-to-date farmers are buying the Farm Cushman because it's an all-purpose engine suited to every power job, from turning the grindstone to operating the binder. Write for catalog showing what other farmers are doing. We build 6-8 and 20 h. p. specialty engines for heavier work. Get descriptive catalog. Don't buy till you see it.

CUSHMAN MOTOR WORKS
2029 N St., Lincoln, Neb.

New Heider Tractor

With All Latest Improvements

The economical, practical tractor for modern farming. Light in weight, strong and powerful, easy to operate. The real one-man tractor for belt or field work.

Special Heavy Duty Tractor Motor

Long stroke type. Large crank shaft, connecting rods and bearings. One-piece cam shaft. The Heider is the pioneer light-weight tractor and no experiment. Will do any kind of farm work more cheaply than horses.

HINTS·SUGGESTIONS·DEVICES

WE extend a special invitation to our subscribers to assist us during the coming months in making this department better than ever. Please send along a description, accompanied by a drawing, of any handy device you may have around the farm, or something that is connected with the home.

ing trees from being barked by rab-

Protecting Trees From Rabbits.

There are different ways of protect-

bits. But if one wishes to be sure of his trees, he doesn't wish to try any patent schemes, such as paints, applications etc. Window screen is a safe and sure protection. It should be wrapped loosely around the tree and secured with wire. Old screen will answer for the winter if it has no holes. While this protection should have been afforded during the entire winter yet if the trees have not been barked up to the present time it might be advisable to screen the young trees even yet. Nothing is more unsightly than a ragged orchard caused by having a percentage of the trees destroyed by rabbits at a time when the trees are tender.

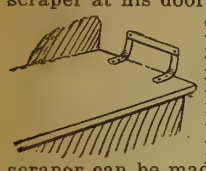
The Cob Fire Kindler.

Where corn cobs are plenty one has the material for a clean first-class fire kindler. Secure a short length of stiff wire and have one end pointed so as to force it easily, into the center of a corn cob. Then saturate the cob

with kerosene, and the kindler is ready. The cob can be burnt, and a clean new one used the next time. This leaves no dirty, oily, kindler laying around in the road, and the wire takes up practically no space.

A Scraper For The Door Step.

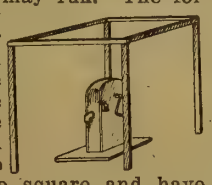
Every farmer should have a foot scraper at his door step. Here he can



clean the filth from his feet and save his wife a lot of hard work sweeping the dirt from the house that he has carried in. A scraper can be made for a nominal expense. Secure a piece of buggy or wagon tire. Have the blacksmith bend it into the desired shape and sharpen the upper edge. This can be secured to the step by means of screws or nails.

Putting a Shade Over the Well.

In order to keep the cistern from the hot rays of the sun and assure cool water in the summer time, it is a good plan to put a frame about the cistern over which vines may run. The following plan may be used: Set four posts one at each corner of the square about the cistern. These posts are seven feet above the ground. They are square and have 2x4 pieces running from top to top. Woven poultry wire is stretched about these posts, leaving the entrance way open. Wire is also stretched from the 2x4's on top. In this case grapevines were planted about the wire so that the vines may run over this in the summer time. Rambler roses or morning glories would answer the same purpose. Woodbine is also suitable for this purpose.



TURKEY RAISING.

I keep about ten or twelve hen-turkeys and two young toms. Two are not necessary I suppose, but when the hens are hatching the eggs the toms are company for one another. I give about twelve eggs to each hen turkey and at the same time set a chicken hen on eight or nine turkey eggs, giving all the poults to the turkey hen.

Feed about the same as little chicks the first few days only give more sparingly. Little poults do not need much to eat the first week and many are killed by overfeeding. When about a week old I let the hen turkey have free range during the day and teach them to come to the buildings for their milk drink.

After the first of June the turkeys will pick up most of their living on free range until fall when they will have to be fed some grain.

Save That Hard Work

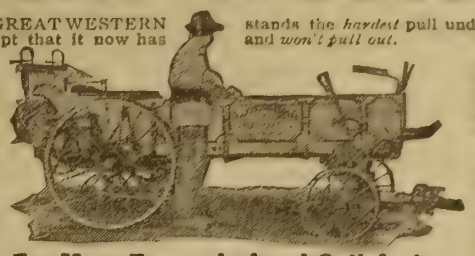
Save Your Horses, too, and Your Money

Get the machine that operates with least effort—that gives no trouble—that makes more profit—that is so strong, so simple, so durable, as to make it the one *perfect* spreader.

You take no chances in buying the GREAT WESTERN. Over 100,000 farmers have used them during the last twelve years and swear by the *old reliable, time-tried*

Great Western

Here is the *proved* GREAT WESTERN of other years, except that it now has roller bearings and is made low down—waist high—*just right*—with safe clearance underneath for rough ground, obstructions and top dress on growing corn. *Wheels* are *under the load*—wheel base is short; result, *lightest* possible *draft*—easy pull—a saving on horses and harness. Double heavy oak bolster, 16-inch malleable fifth wheel; stands the *hardest* pull under worst conditions, and *won't pull out.*



Simplest Drive: Direct chain drive—no concealed gears, everything in plain sight; no reversing devices; engine mechanism is stopped while driving to or from field. Turns in its own length. Built for perfect permanent service—economical operation—lifetime durability. Buy your *last* spreader *now* by making it a **Great Western.**

Far More Economical and Satisfactory

Get Our New Spreader Book.

Things We Won't Do

We won't build them light or flimsy or hang the load between the wheels just to save a few inches in height.
We won't use a narrow front truck, because you couldn't top dress.
We won't cheapen the frame by using light construction with only two sets of rollers, or a half-apron, or any of the cheaper means.
We won't build a spreader in a cheap way just to sell, regardless of satisfaction in use.
We want you satisfied or no sale, and you will be with the GREAT WESTERN.

Things We Do

We build them right.
We put the wheels under the load so as to make light draft.
We use a heavy, double front bolster and heavy malleable fifth wheel, so you can't pull the front out.
We make a short wheel base so you can turn anywhere.
We use roller bearings throughout and an endless roller bearing apron with 10 rollers.
We build the "World's Best" Spreader to give you long service and the best work at the lowest possible cost. Ask for new spreader book, it's free.

Rock Island Plow Co., 182B Second Ave., Rock Island, Ill.

A GUARANTEE OF BETTER LUMBER

A FREE ROUND TRIP TO DUBUQUE — SEE WHAT YOU BUY

SAVE MONEY ON YOUR LUMBER

When you buy lumber, BUY THE BEST and build to LAST. Poor lumber is dear at any price.

To get the very **highest quality** and **low cost BOTH, buy from us direct.**

You will get better lumber in every item than any local yard can furnish you; because we make our own lumber and grade it properly; because your order is selected from the most complete assortment in the Middle West, consisting of over 20,000,000 ft. of the best, brightest, new lumber ever sawed. You always get exactly what you want and just what you should have for the work in hand, and everything of **the highest grade.** You will not be obliged to take seconds or substitutes which are supposed to be "just as good."

OUR GUARANTEE

All our lumber is graded under the Manufacturer's Association rules and every bit is guaranteed to be up to grade or better. Every shipment we make is sent subject to inspection, and if not found up to this guarantee, the shipment may be returned, at our expense, and your money will be refunded.

R.R. TICKET

When you buy from us, you buy direct from the manufacturer at mill prices.

You are your own lumber dealer. All the middlemen's profits go into your own pockets. You secure better lumber and at a saving in price.

If you want a car load, come to Dubuque. We want an opportunity to show you our stock and convince you that we are in position to serve you to advantage. If you buy, *will gladly refund your railroad fare both ways* and you have an opportunity to select your own order personally. *This is a tremendous advantage* to you, but if you cannot come, order by mail. *No matter how small* your order may be, we can save you money and our absolute guarantee of quality insures your satisfaction on every item or you can return it and get your money back.

We've been in business nearly thirty years and have thousands of pleased customers. We treat you right and would ask you to have your banker look us up.

Lumber prices are going up and if you expect to build in the near future, it will pay you to order now before the advance. Send us a list of the items you want and we will gladly quote you.

Ask for our price list. Act quickly. Write us today.

CURRENT EVENTS

THE Page vocational education bill, authorizing a maximum appropriation of more than $14,000,000 for agricultural and trade educational work, was passed by the senate during the past week. The bill now goes to the house, which has already passed the Lever bill with a smaller appropriation. The Page bill would establish courses of instruction in trades and industries, house economics and agriculture in the various public schools of secondary grade, provide for state agricultural schools, testing and plant breeding stations, the education of teachers and general extension work. The subject is one in which the late Senator Dolliver, of Iowa, was greatly interested and the bill introduced by Senator Page, of Vermont, follows out Senator Dolliver's ideas. It is considered highly probable that in conference the two houses will hit upon a happy medium between the Lever bill (with its appropriation of $3,500,000, providing for the establishment of extension departments in the state agricultural colleges, through which instruction in agriculture and home economics would be carried into the homes of the farmers) and the Page bill (with its appropriation of $14,000,000 for the most extensive vocational campaign ever carried on in this country). The subject is one of the most important now being considered by congress, and farmers who are desirous of the passage of the Page bill by the lower house should lose no time in writing to their representatives in congress.

NO SOONER had the Turkish government given in and decided to accept the Balkan peace terms, even to the extent of surrendering the fortress of Adrianople, than the situation was complicated by the uprising of the Turkish people against the government and the assassination of the Turkish minister of war. Constantinople is now in the hands of the Young Turks, who are bitterly opposed to the surrender of Adrianople and propose to continue the war to the bitter end rather than accept the present peace terms. Relying on the Turk's acceptance of their terms the Balkan states had begun to withdraw their troops, when the word came of the revolution in Constantinople. The Balkan peace delegates are now planning to quit London, with every prospect of war being resumed within a few days. Unless the big powers can prevail upon the new ministers in charge of the sultan's government and show them that further opposition is worse than useless it looks now as though thousands of more lives would be sacrificed and the crescent would struggle longer against the cross. The Balkans claim to be in better condition than ever to attack the Turks and have the moral support of previous decisive victories and the sympathy of practically the entire civilized world.

GEN. DANIEL E. SICKLES, the most noted of the surviving Union generals of the civil war, has been having more than his share of financial troubles recently. Not only is his New York home heavily mortgaged, while many of his personal effects have been seized for debts, but last week the charge was filed against him that he is about $25,000 short in his accounts as treasurer of the state monument commission. There was a likelihood for several days that the old warrior (he is now almost eighty years of age) would be obliged to go to jail, but a friendly sheriff made it possible for him to secure bail and thus be saved this humiliation. The matter was made dramatic by the action of Mrs. James Longstreet, widow of the famous confederate general whom General Sickles had opposed on the field of battle. Mrs. Longstreet proposed to raise the amount necessary to save General Sickles from arrest by contributions from old confederate soldiers who had fought Sickles and his union men in many a bloody battle. The offer was not

What Time Is It —by this Watch?

Is it five minutes fast or five minutes slow, or exactly correct? Can you rely on it? Does it remind you of the watch you now carry?

Now see if you think you could rely on a watch that is made like this—

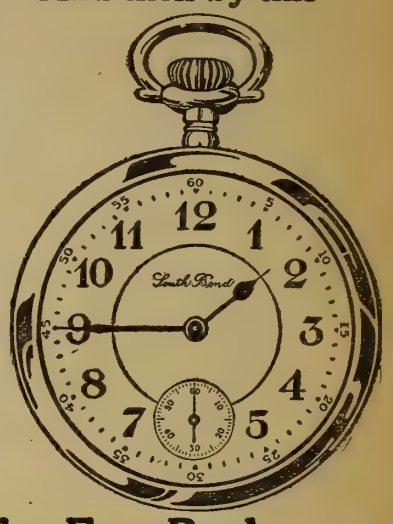
The South Bend Watch is six months in the making, the cutting, finishing and assembling of the parts. 411 inspections are given these operations. More than 60 men work on each watch.

When the watch is assembled it is run in a test of 700 hours. We keep a watch sometimes six months longer than it spends in the making to make it attain our standard. Some "South Bends" stay a year in the factory. But when they come out they are right.

That's why "South Bend" jewelers can so easily regulate South Bend Watches to your personality. It is this personal regulation that makes good watches keep perfect time. It's the *lack* of it that prevents others, even good watches, from doing it.

Buy a watch of one of these men. Let him "fit" you with a South Bend Watch. *You'll have a watch to rely on*, a watch that will keep correct time for *years*.

And then by this—



Write for Free Book

Our book, "How Good Watches Are Made," tells all about watches—things you should know. Just say on a post card, "Send me your book."

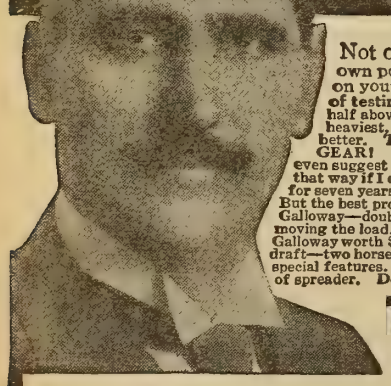
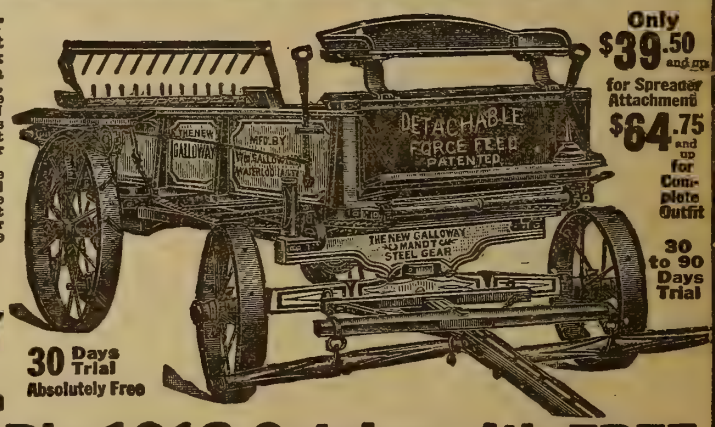
Let Me Ship YOU This 1913 Spreader FREE



Not one cent down. No bank deposit. Keep your money in your own pocket. I just want you to try my new Spreader, that's all. Try it right on your own farm for a whole month free. Test it out as you wouldn't think of testing any other spreader in the world. Pile on the manure a foot and a half above the box. Put on all she'll hold. Take the fine, powdered stuff or the toughest, heaviest, tramped-down, slough-hay kind from the calf yard. If it's frozen, so much the better. Take it into your field, whip your team to a gallop and SLAM IT IN GEAR! Say, I know that's an awful test. So do you! A test no other manufacturer dares even suggest to you. But do you think for a minute I'd ship you a spreader and let you abuse it that way if I didn't know it would make good? I know what I'm doing. I've made the same offer for seven years, and the Galloway today is better than ever. 40,000 farmers have proved it. But the best proof of all is the machine itself—eleven patented features—all exclusive with the Galloway—double drive chains furnishing power from both wheels alike direct to the beater and moving the load. The only endless apron force feed, roller bearing feed spreader built. Makes the Galloway worth $25.00 more than any other spreader sold today. Low down—easy to load—light draft—two horses will handle it easily. Pull between wheels entirely on the reach—and many other special features. I can't tell them all—just get my catalog before you buy any other make or style of spreader. Do it today.



Only $39.50 and up for Spreader Attachment

$64.75 and up for Complete Outfit

30 to 90 Days Trial

30 Days Trial Absolutely Free

THE ONLY WAY IS THE GALLOWAY

Selling Direct from Factory to Farm

You know Galloway. You know his fair, square, straight-from-the-shoulder way of doing business direct with the farmer from his factories and saving you the 30% to 50% middleman's profit. No man in the country ever gave the farmers as square a deal as Bill Galloway.

Now, I'm out to break my own records.

I know I've done it, but I'm going to leave it to you. If you can figure out a fairer proposition than I'm making for 1913, I wish you'd write and tell me—I can't.

Write Me—Get My Special 1913 Proposition

Here comes the best news of all. I am going to help you get your spreader partly or even entirely free. No canvassing—no soliciting. When I say free, I mean FREE. I've been four years working out this plan, and say, it's the biggest, fairest and most liberal co-operative offer ever made.

Now, I want you to get my offer right away. I don't want you to wait a minute. I have a special reason for wanting you to hurry and I'll tell you when you write me.

Here's the Proof:

Gentlemen: My Galloway Spreader was ordered about the first of February, 1909, and is a 50-bu. machine. I have run over a thousand loads of manure through it. Perfectly satisfied.—W. G. SUTFIN, Dundee, Ill.

Sir: My Galloway Spreader works as fine as silk, and I have the $30 left that it would have cost me if I had bought a trust spreader.—S. E. TRENKS, Geddes, S. D.

Dear Sir: The spreader I bought of you is a dandy. I have hauled 150 loads with it without the least trouble and with two small horses not weighing over 1,100 pounds each. I use the 60-bu. size and I would advise anyone in need of a spreader to try the Galloway and see for themselves. It is the lightest running and the strongest in the market today. It is O. K.—GER. McCARTHY, Monona, Iowa.

Now Get My Big 1913 Catalog—It's FREE

Don't let this paper get out of your hands until you have sent for Galloway's wonderful big illustrated free spreader catalog. Find out how you can get a Galloway Spreader shipped right to your farm for 30 days' free test. And above all, get posted on my SPECIAL LIMITED OFFER. I want you to get that offer sure. Not another like it. Send me the coupon or letter or postal today.

"A Streak of Gold"

The only book of its kind in the world. It tells you just the practical facts every man ought to know about fertilizing. Tells how to handle manure, how to treat it, keep it and use it to the best possible advantage. Worth a hundred dollars to any business farmer. Regular price one dollar. Free to you when you write me.

accepted, but goes a long way toward showing how sectional lines have disappeared and the North and South have come together in mutual respect. General Sickles was a member of congress for several years, was secretary of the American legation at London and for four years was United States minister to Spain. He took a part with distinction in the battle of Fredericksburg and was conspicuous for his ability and bravery at the battles of Chancellorsville and Gettysburg, losing a leg in the latter engagement. When his financial troubles became known a speech was made in his behalf in congress, the speaker declaring that England honored her war heroes by life pensions, but the United States proposes to disgrace one of her last surviving heroes by arrest. General Sickles has led a strenuous life and now as he nears the end of his days finds himself in such serious trouble as makes his life anything but happy and peaceful.

GRAVEL ROADS.

To the Editor of The Homestead:

Gravel roads if well built will last six to nine years. It suffers most when not needed, namely, in very dry weather in summer or when frozen hard in open winter.

In the first place the road bed should be well made but not too rounded, as this induces waste. Where seepy spots occur a natural drain should be built crosswise of the road, made of coarse rock to let the water out to the side of the road. Gravel should be at least eight inches deep in the center and wide enough for two teams to pass.

We once helped to build a two-mile gravel road in Missouri which was built by the tax rebate system twenty years ago. It worked hardship on our district in this way. Our district had a state road running north through the center. To the north of us two road districts met on our center line running north and these two districts united with us. We built to the beginning of their near end of road so it came to pass that they got the full benefit of their work while we only got part of it. Most of ou people had no use for it as it was out of the way. To make matters worse the road bosses of the other two districts drew their full quote of road money at the expence of our district. This left our road boss the next year with 65 cents of road money and the poll tax to keep the district in order and by the time all this land tax rebate had been used our district was in very bad shape.Our money nearly all went to other districts and it is not just for a few to have a good road at the expense of the others.

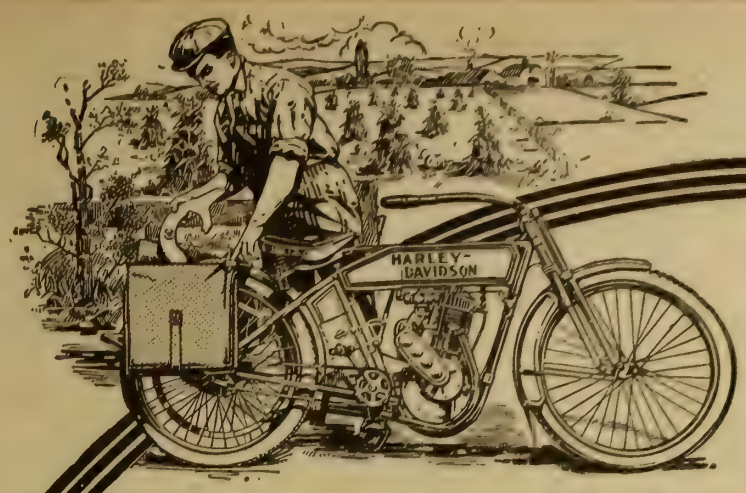
When a boy thirty-one to thirty-seven years ago we did a good deal of gravel hauling and a few weeks ago I was surprised to go back and find how those roads changed. Where we helped build a good gravel road thirty-two years ago they have been hauling creek gravel every six to eight years and in this way they have a good road. They have the gravel near at hand and with plenty of loaders a team averages one load an hour.

I think if the law required four inch tires and then the doubletree and neckyoke were lengthened out to give the team more liberty,the roads would be much better. If we can't go with the four inch we ought to stay off the road or use the spring wagon to get the necessaries of life. There is no excuse generally for cutting up the roads except about the first of March.

Our country roads will never be graveled, for long before we get over them we will have to start over again. Some people think gravel is ever lasting but that is a sad mistake. Even now we don,t think of saving our surface dirt and do not employ the motto, "a stich in time saves nine,"our roads must wait till the working time comes and go all to pieces if the weather is bad in that time.

Hudrain Co. Mo. John Klingele.

I notice the banks, seed stores and some other places of business are not running seed corn testers for their patrons as they did last year. There's a reason.



To Town and Back for a Cent

ALTHOUGH the Harley-Davidson will travel about ten miles for a cent that is one of its smaller advantages.

It will place the country for miles around at your and your children's command. It is the best "keep the boy on the farm" factor ever produced. It never tires, costs nothing when idle, and is always ready in case of emergency. It is also a great horse saver.

The sturdy construction of the

HARLEY-DAVIDSON

together with its reliability, economy and the fact that it is the only motorcycle made with the Ful-Floteing Seat (a device that does away with all jar and vibration due to rough roads) and its other exclusive features make it the ideal machine for country use.

Adopted for carrying United States Mail by 3700 carriers. Adopted for use in nine different government departments.

Call on the nearest Harley-Davidson dealer for demonstration or send for literature.

HARLEY-DAVIDSON MOTOR CO.

Producers of High Grade Motorcycles for eleven years.

YOUR NEIGHBOR'S HOGS ARE DYING

YOURS MAY BE NEXT!

Nearly $50,000,000.00 of cold hard cash for hogs which should be in the pockets of the farmers, was lost last year, because hog owners would not take the simplest precautions to protect their stock.

Worms cause 90% of all hog losses. Even the dreaded cholera attacks herds only after worms have sapped their vitality and weakened their power to resist disease. All hogs have worms, from the time they are a few weeks old. **Yours have them.**

Columbian Stock Powders will positively destroy all worms and dispel them in twelve hours after feeding. They will stop your hog losses. The oldest stock powders on the market; the leader for 25 years. The only powders that never fail to expel all the worms.

COLUMBIAN STOCK POWDERS are strictly a medicine—not a food. They make your hogs thrifty, tone up the system, and prevent **Cholera, Thumps, Scours, Coughing, Fevers, etc.** They aid digestion and make feed go 25% farther. Endorsed by prominent stockmen everywhere.

ABSOLUTELY NECESSARY FOR BROOD SOWS. *Keeps them in good condition and insures strong, healthy litters.* Makes the milk flow more abundant and purer, and eliminates the feverished condition that results in unhealthy, runty pigs. You must put your sows in condition **right now** to get the most thrifty pigs.

WE HAVE A SPECIAL FREE OFFER to make you at this time which we have never before made. You cannot afford to miss it as it means dollars to you if taken advantage of **at once.** *You can prove the value of* **Columbian Stock Powders 90 days before you pay a cent.**

Write us today for full information and tell us how many hogs you have.

COLUMBIAN HOG & CATTLE POWDER CO., 1450 Genesee Street. KANSAS CITY. MO.

AGENTS WANTED

We have an unusual money-making proposition to offer you if you are a man of good standing and good reputation in your community. The pay is large and sure and the work is not hard. *Write us for particulars giving references. It will pay you to write to-day.*

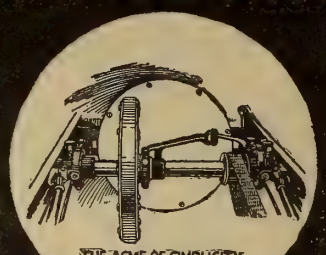
THE COMPLICATED GEAR TRANSMISSION



THE ACME OF SIMPLICITY
THE LAMBERT PATENTED FRICTION TRANSMISSION

$375,000 LOST DAILY

According to Motor Age Statistics
Will you help pay this loss or use a

LAMBERT

Patented Friction Drive Car and escape it?

More than half the troubles, accidents, break-downs and expensive delays and repair bills in the operation of motor cars result from the use of gear transmissions.

The Lambert Friction Drive frees you from this tremendous burden. It is of the simplest construction, employs but one-third as many parts as are used on gear drive cars and is practically fool-proof. No mechanical skill is required in its operation and it delivers 20 per cent more of the power generated by the motor directly to the rear wheels than is possible with bevel gears.

Climbs the steepest hills and travels through snow, mud and sand where no gear drive car can attempt to go.

Our "Automobile Catechism" and "Motor Car Anatomy" explains these facts in an interesting way and enables the intending buyer to select his car with intelligent care. Send for them right now.

Iowa Beef Producers Meet.

CROPS marketed on the hoof as beef cattle bring larger profits than when sold directly as grain and hay. That was the first reason why more beef cattle should be grown in Iowa, urged by the speakers at the annual meeting of the Iowa Beef Producers' Association held at Des Moines, January 29th. The next big factor in favor of beef production for Iowa farms, rather than grain farming was that less fertility is sold from the farm when crops are marketed as live stock products instead of being sold at the elevator. There was a $3,000,000,000 corn crop produced in the United States last year and Iowa grew more than her share of this, but there was less beef produced in Iowa in 1912 than in 1911. The supply of live stock at the beginning of 1913 is less than at the start of 1912, according to Pres. Charles Escher, Jr., in his address at the evening meeting. There is no danger of overproduction of beef in Iowa. It will require at least seven years for the United States to get back to the normal supply of beef cattle at the very least, and by that time the population will have increased another 10,000,000.

Live stock farming was held up as the highest type of agriculture as well as the best paying one. Half of the farms of Iowa should be producing beef either as a straight baby beef proposition or in connection with some milking. It is President Escher's opinion that a car load of baby beeves from each of 100,000 Iowa farms each year would not mean overproduction for the state. Pacific coast markets are taking and will continue to take a large share of western beef as fast as it is produced. Eastern markets must be supplied largely from the corn-belt states. Iowa should produce at least her share of this. What Iowa needs to increase profits in farming to make farm life more attractive, farmers more contented and to keep up the fertility of the Iowa farm is more of the "old cow."

Professor Kennedy pointed out that from both the steer feeders' and the consumers' standpoint the beef cattle situation is alarming. With a total beef cattle supply estimated at about 35,000,000 head against better than 50,000,000 twelve years ago, accompanied by a 20,000,000 increase in population in the United States it is small wonder that feeding cattle and beef steak are both high. Two methods of beef production were outlined by Professor Kennedy, who talked on "Producing Beef on $250 Land." First was the straight baby beef method, where the calves are allowed to follow their mothers with some grain after the first two months are past. These calves are pushed as rapidly as possible and sold when weighing around 1,000 to 1,100 pounds at sixteen to eighteen months of age. The other method is where beef and milk are produced together from cows of some ability in both directions. The cows are milked and the calves are grown to yearlings either on skim milk or possibly two calves to the cow. The finishing process takes longer and the calves do not reach market till from twenty-four to thirty months of age, weighing around 1,200 pounds or better. Either method was shown to be sufficiently profitable to net 6 per cent interest on $250 land if present prices could be secured for the beef. Nor does Professor Kennedy look for lower prices.

Rex Beresford, specialist for the association, corroborated the statements of Professor Kennedy by showing that twenty-four Iowa farmers had produced baby beef during the last year at a profit on high-priced Iowa land and on high-priced feeds. Eight hundred and sixteen calves were grown by these men to 830 pounds weight at 14.5 months and marketed weighing 832 pounds at $8.30 per hundredweight or $69 a head. The average cost of producing these calves on last year's high-priced feeds was $62, leaving a profit of $7 a head. It was also shown that live stock farms are on the whole more profitable than grain farms and that the average stock farm is more productive than is the farm devoted entirely to grain production. The average yields of ten beef cattle farms in Iowa were compared with the yields for the same years on grain farms in the same neighborhoods. It was found that for a five-year period the cattle farms averaged fourteen bushels more corn per acre than did the grain farms. Other crop yields were very nearly in proportion.

A short talk on the importance of the beef cattle industry and of the organization of beef cattle breeders in the state was made by President Pearson, of the agricultural college. At the afternoon session the following officers were elected to serve for the coming year:

President, Charles Escher, Jr., Botna, Iowa; secretary, George H. Burge, Mt. Vernon, Iowa; treasurer, C. H. Hechtner, Chariton, Iowa; vice-president,

Take Good Care Of The Colts

It's cheaper to *raise colts* than to *buy horses*. But it's *costly* if you *lose* the colts. Keep a bottle of Kendall's Spavin Cure handy. For thirty-five years has proved it the safe, reliable remedy for spavin, splint, curb, ringbone, bony growths and lameness from other causes.

Kendall's Spavin Cure

is used and recommended by farmers, horsemen and veterinarians. Sold by druggists everywhere, $1.00 a bottle, 6 for $5.00. Get a copy of "A Treatise on the Horse" at your druggists, or write

Cassady, Whiting, Iowa.

An executive board made up of the president and secretary of the association together with the dean of agriculture and the head of the animal husbandry department at the agricultural college, and the secretary of the state board of agriculture directs the work of the association through the representative hired for the purpose. The plans of the association for the next year include the publication of bulletins, the collection of statistics and information on the production of beef in Iowa, institute work and the running of special trains advocating the production of beef, such as were run last year on the Burlington and Northwestern roads.

PLOWING AROUND FRUIT TREES.

To the Editor

The usual way of plowing around fruit trees is more injurious to the trees than not plowing at all, for it is ruinous to their growth and productiveness and cuts off nearly all of the important roots. These roots that grow close to the surface of the soil are the great absorbents of nourishment, whether they are the roots of trees, small plants or shrubs that yield fruit. This is a common habit of trees and plants to throw out a system of roots near the surface of the soil, where they will absorb and readily apropriate the fertilizing elements with which they come in contact, to the purpose or developing the stems, or the fruit of the growing plant.

If we will examine the surface soil around any tree where the ground has not been plowed or disturbed for a number of years, we will find that a system of roots has been formed close to the surface of the soil. If these roots are all cut off another set will soon be formed in their place, or if the soil is worked up to the trees and left there a set of roots will start about so far from the surface, then if more dirt is worked around the tree another set of surface roots will start out except in the case of extremely old trees. We have worked soil up around grape vines, and in one year a new set of surface roots have formed that would measure more than two feet long.

Some trees that are set out too deep will not thrive for a few years, or until they have put out another set of feeding roots, yet as soon as a new system of roots are formed they will make a very rapid growth and produce good crops of fruit. These facts are enough to prove that roots close to the surface are essential to the growth of trees and plants, or nature would not be so prompt to reproduce a new set as soon as one set is injured. This system of surface roots is not confined to trees alone, as the stems of corn, wheat and other grain, if the seed be buried deep, will immediately send out a system of surface roots, and if the soil be piled around the stems before the blossoms appear, another set of surface roots will be sent out just below the surface of the soil.

From these facts we can see at once that if we plow an orchard that has been in sod for a number of years we must plow very shallow for a number of feet away from the tree row. With a plow properly set and a good team, it is not a difficult piece of work to plow an orchard and when up within a few feet from the trees the plow should be adjusted so that it will cut off about two inches from the top of the soil and not disturb the surface roots, but when an orchard is plowed every year or two from the time it is set out the surface roots will be kept down to a depth where they will not be injured by a plow.

Trees or vines of all kinds will make a better growth if the surface roots are not disturbed when the soil is plowed, and if an old orchard is to be plowed at all great caution should be taken not to plow too closely

Our 20th Anniversary

Is the 20th Anniversary of the Automobile

1913 is the 20th anniversary of the American-made automobile. The first successful gasoline car was built here in Kokomo by the Apperson Brothers—Elmer and Edgar. The original car is now in the Smithsonian Institution, Washington—a priceless relic.

Apperson "Jack Rabbit"

The Car With the Powerful Engine

Fathers of the Automobile

The Apperson Brothers built the first regular automobile factory in the United States.

In every branch of the business they were pioneers. They are the recognized fathers of automobiling, as the Wright Brothers are of flying.

Making Automobile History

The months and years following the first car were busy ones for the Apperson Brothers. They worked night and day to make their car reliable and perfect. In 1895 they won the international prize for the most efficient gasoline engine for motor cars—the first time an American had thus been honored.

Mechanically Perfect After 10 Years

In 1898 the Apperson Brothers' car was much improved. Edgar Apperson drove from Kokomo to New York, 900 miles—a sensational performance. Three years later he was the first to drive a car 100 miles without a stop. For ten years the "Jack Rabbit" has been a trouble-free car. In value it is as standard as gold

Guaranteed 20 Years

Seventeen thousand enthusiastically satisfied users will celebrate the 20th anniversary with us. The average age of their cars is 8 years. Some cars, still in use, are 17, 18 and even 19 years old. No "Jack Rabbit" has ever worn out. It is guaranteed by 20 years' experience. Buy it now, and you should never need another car.

Write for Complete Story

It takes a book to tell all the Apperson advantages.

"Jack Rabbits" are entirely built in the Apperson factory.

The Apperson Brothers still personally supervise the making of the entire car.

The "Jack Rabbit" has a famous engine and a celebrated clutch.

Season models are no longer recognized by us.

Your 20th Anniversary "Jack Rabbit" will be in style and good as new five and ten years hence.

"Jack Rabbits" are as beautiful as they are durable. Comfortable and luxurious in equipment.

Upkeep so low that people with incomes of $800 a year are not burdened.

A 9 per cent margin makes our prices possible.

Power, Long Life, Simplicity—that's what you get in the Apperson.

Write for full particulars regarding the "Jack Rabbit."

Electric Self-Starter and Electric Lighting Furnished if Desired

Apperson Bros. Automobile Co.

Nichols-Shepard Oil-Gas Tractor

Burns Kerosene, Gasoline, Naphtha, or Distillate at all loads. Designed right. Strong in every part. Lots of power.

Motion as Steady as a Steam Engine

A Great Threshing Engine

Will not shake itself to pieces. Does not drive through bevel gears. Guides as easily plowing as it does on the road. Get full particulars by writing for Oil-Gas Tractor Catalog No. 3.

Nichols & Shepard Company, Battle Creek, Michigan

Builders of the Red River Special Threshers and Steam and Oil-Gas Tractors

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

A Few Hatching Facts.

By Chesla Sherlock.

IF YOU cannot manage an incubator so that it hatches strong, active chicks you have failed in your attempt to rival Nature. The primary object of every incubator manufactured is to hatch chicks, but many of the incubators on the market fail to hatch strong, livable chicks. You should determine in your own mind which incubator will produce the good chicks and buy only that incubator regardless of cost.

The cheap incubator is nothing more than a death trap, for it is evident that the manufacturer cannot put the materials and labor into the cheap incubator that is demanded for perfect incubation. You learned years ago that the hen "that does not mean business" should not be set. Then why attempt to use an incubator that is not as efficient as the restless hen?

To secure the very best results during incubation and to guard against the possibility of the eggs becoming chilled, they should be gathered every hour during cold weather. It has been proven that if an egg is allowed to be in the nest during very cold weather for a period of thirty minutes or more it will be ruined for hatching purposes. However, the writer has practiced gathering the eggs every hour for some time and has had good results. In one test seventy-five chicks were hatched from seventy-five eggs set and seventy-one were raised to maturity.

If it is necessary to keep the eggs a few days before they can be placed in the incubator, they should be placed in a room where an even temperature of 60 degrees is maintained. They should be turned at least once each day.

Where it is possible the eggs should be set the same day as laid. Practical tests and experiments have demonstrated the fact that where eggs are set immediately the chicks produced are stronger, larger and seem better equipped to fight life's battle than those hatched from eggs kept for periods varying from two days to two weeks.

This fact can easily be explained. The egg, like everything else containing a large percentage of moisture, is subjected to evaporation. The longer the egg is kept in the air without the germ of life being developed, the faster it will evaporate. Consequently the air cell of the egg becomes larger at the expense of the life-giving portion of the egg. This seems perfectly natural and we should exert ourselves to place eggs in the incubator that are newly laid.

All eggs that are misshapen, rough, or over size in any way should not be placed in the incubator. We have satisfied ourselves that it is practically impossible to hatch an egg that is not perfectly smooth in shell and uniform throughout. There are some people who think that if a hen wins first prize at some show, they should set her eggs whether they are uniform in size or badly misshapen. This is the wrong idea. The first prize hen that wins at the show should not be given the preference over any other that lays ill-shaped eggs. It should also be kept in mind that the prize winner does not always produce the best chicks.

As soon as the incubator arrives, set it up according to the directions given by the manufacturer. The best place for the incubator is a well lighted and well ventilated cellar. There must be no musty odors, for it will ruin all chances of a successful hatch. Be sure that it is perfectly level or the heat will not be evenly distributed. Fill the lamp with good oil—never use a cheap grade of oil. Be very careful about leaving the oil-can in the same room with the incubator. It has been demonstrated that the presence of the oil in the same room with the incubator will lessen the hatch from 10 to 17 per cent.

If the machine is operated on the hot-water principle it should be filled with boiling water. There are several reasons for heating the water before placing it in the incubator, the main one being that cold water, when heated, will expand and overflow.

The lamp should then be filled and lighted. It should burn with an even, steady flame, for the same principle in heating holds true as in lighting. You know that a small, irregular flame will not throw the best light. It is equally true that it will not throw the greatest amount of heat as an even flame.

When the temperature is up to 102 degrees the machine may be regulated. Another day should be given to determining whether the machine is properly regulated before placing the eggs in the tray. When you are confident that it is running evenly and holding the temperature well, the eggs may be placed in the tray.

Naturally when the cold eggs are placed in the tray the temperature will run down, but do not touch the regulator under any circumstances. The temperature will be back again in eight to twelve hours. The door should not be opened for at least twelve hours after the eggs are placed in the incubator. If you had the machine properly regulated before setting the eggs it will do better work without you bothering it. Here is where the advantage of a glass door comes in.

Do not start to turn the eggs later than the third day or do not turn them after the eighteenth day. For the first few days of the period of incubation the operator should be very careful not to use too much time in turning the eggs. If the weather is cold, ten minutes will be plenty of time for both the turning and the cooling. If the weather is warm, twenty to twenty-five minutes may be used without any harm. The eggs should be cooled twice daily. After the eighteenth day do not open the door of the incubator, except when it is absolutely necessary.

There are many people that believe in the idea that excessive moisture is absolutely necessary to secure the best results in hatching, while others are of the opinion that no moisture whatever is needed. The writer has given the subject of moisture a good deal of attention and has learned a few things that are interesting.

It will be noticed that the hen always hatches the best chicks. No moisture is applied by the hen to the eggs, but it is noticeable that the hen wandering around in the weeds to get her morning feed will collect a good deal of dew, which is carried on her plumage. When the hen returns to the nest this moisture comes in contact with the eggs. This fact has caused many to believe that moisture must be applied to the eggs.

In tests two or three seasons ago we learned that moisture is not necessary to hatch out strong, husky, chicks if the eggs are set the same day as laid. But where the eggs are several days old, possibly a week or two, it was found advantagecus to use a moderate amount of moisture. We never apply the moisture directly to the eggs, but place it in small saucers or dishes in the bottom of the incubator.

When the chicks commence to hatch do not let the curiosity get the better of you. Do not open the door during the hatching period. The chicks will get along better if you do not molest them. If the doors of the incubator have a lot of moisture on them, do not be alarmed, for everything is all right. If you should open the door at this time, you will ruin it all and possibly chill some of the chicks so that they will die.

The chicks should be kept in the incubator for at least twenty-four hours. They should be perfectly dry before leaving the incubator. You should use a great deal of care transfering them to the brooder, taking special pains that they do not become chilled. It is well to use old flannel rags to wrap about them and insure their being warm.

After all the eggs have hatched, remove all the rest and break each one and note the contents. In this way you may be able to learn valuable lessons in regard to incubation. The incubator should be given a thorough scrubbing and allowed to dry. It will then be ready for another hatch or can be stored away for the next season.

TO GET FERTILE EGGS.

To the Editor

Undoubtedly the hardest problem in the hen business during this time of the year is to get eggs that will produce strong, healthy chicks. There are many things that will weaken or destroy the fertility of an egg either before or after it is laid. As the demand for the early chicken is increasing a profitable field of enterprise is open to farmers and poultrymen. However, many who would seek to take advantage of it have given up in despair simply by failing to secure eggs that will hatch strong and vigorous chicks.

The foundation of this year's breeding stock should have been laid at this time last year. Before artificial incubation and breeding came into general use eggs were never set until late in the spring or early in the summer and if the breeding stock was healthy there was very little trouble about fertile eggs. The trouble was to keep the hen sitting three weeks. At the time when these eggs were laid Biddy was out picking her living where grass and insects were plenty. But as the incubator has come into more general use eggs are set during cold weather when the hens are shut in and the supply of green stuff and animal food is limited, and poor hatches are not uncommon.

Another important thing is to see that the laying hens are in a healthy condition. If kept closely confined in unhealthy quarters, suffering from disease and infested with vermin trouble is going to pop up somewhere. Even if the eggs from such hens should hatch the chicks will be small, puny ones that will die before they are two or three weeks old. A good idea is to select twelve or fifteen of the best hens and mate them with two or three vigorous cockerels or twelve or fifteen pullets with two or three

Your Winter Harvest in Eggs

There's not the slightest reason why every poultry raiser shouldn't have a harvest in eggs right now when eggs are high. Hens, *your own hens*, have a tendency to grow fat and lazy and the egg organs to become sluggish. This may be due to lack of exercise, the absence of green food and to other causes. But whatever the cause, remember that

Dr. Hess Poultry Pan-a-ce-a

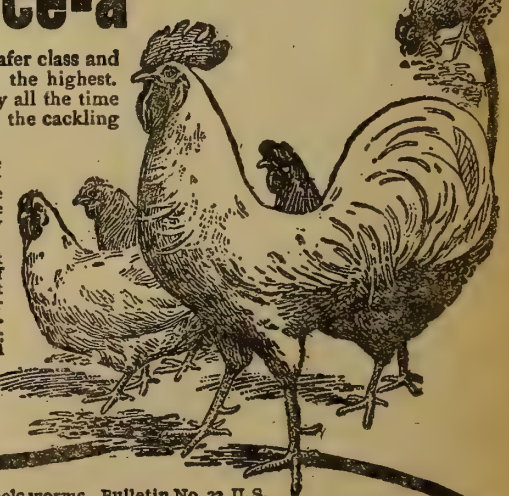
positively tones up the dormant egg organs and takes the hens out of the loafer class and makes them lay eggs for market right when prices are the highest. It keeps hens hungry for their grain, so they remain busy all the time scratching for a living—and it's the busy hen that does the cackling and the more cackling the more eggs.

Dr. Hess Poultry Pan-a-ce-a contains:
Potassium Nitrate. An Eliminant.
Nux Vomica. A Nerve Tonic
Quassia. A Bitter Stomachic and Appetizer.
Hyposulphite of Soda. An Internal Antiseptic.
Iron (Sulphate). A Blood Builder.
Iron (Red Oxide). A Blood Builder.
Carbonate of Lime. An Antacid and shell forming.
Sodium Chloride. An Appetizer and Cleanser.
Under the supervision of Dr. Hess (M.D., D.V.S.) the above is carefully compounded and blended, with just enough cereal meal to make a perfect mixture.

Note the formula for Pan-a-ce-a in this advertisement; the definitions of ingredients are taken from U. S. Dispensatory and our best writers. With the formula on the label there can be no exaggeration of claims. You can look up the ingredients in any medical dictionary, and besides every Hess & Clark preparation is guaranteed.

Our Proposition:—Feed your hens Poultry Pan-a-ce-a right now when eggs are scarce; if you have the least shadow of doubt that it has not made your hens lay more eggs and kept them free from disease at a cost of only a penny a day for 30 hens—take to the dealer the empty package and he is compelled to refund your money. 1½ lbs. 25c; mail or express 40c; 5 lbs. 60c; 12 lbs. $1.25; 25-lb. pail $2.50; except in Canada and extreme West. If your dealer cannot supply you, we will.

Send 2c for Dr. Hess 48-page Poultry Book, free.



DR. HESS & CLARK
Ashland, Ohio

DR. HESS STOCK TONIC improves digestion, increases the appetite, expels worms. Bulletin No. 22, U.S. Department of Agriculture, says: "Only 60 per cent. of the food taken by stock is digested." You know yourself that you can fatten hogs on the corn that passes through the steers undigested. "The Dr. Hess Idea" is to save a part of this wasted feed by *increasing digestion*. The formula is on every package and the U. S. Dispensatory, or even a medical dictionary, will tell you whether the ingredients will produce the results claimed. And, besides, it's sold only on a written guarantee. 100 lbs. $5.00; 25-lb. pail $1.60. Except in Canada and extreme West and South. Send 2 cents for Dr. Hess Stock Book.

FREE. Dr. Hess (M.D., D.V.S.) will at any time prescribe for your ailing animals free of charge if you will send him full details. Mention this paper and send 2-cent stamp. 96-page Veterinary Book also free.

INSTANT LOUSE KILLER KILLS LICE

JOHNSON'S FIRST "AD"

M. M. Johnson Engineer At the Mill Makes Incubators

It is all told about in this free book, along with many other experiences and facts that will show you how to make the most money in the poultry business.

1913 PRICE LESS THAN $10

Freight Prepaid East of Rockies—That Far If You Live Beyond

The Old Trusty Book For 1913—Is Ready

Folks who have read previous Old Trusty Books don't need to know more—they will send at once for the new edition. Every chapter is worth real money to every poultry raiser. The "Ups and Downs of an Inventor" is the most interesting, most entertaining and most cherished bit of history ever written about incubators and poultry. The whole book is home written, home made and home printed. It is plain and practical—contains the facts learned in 17 years of experience during which time Johnson has made and sold over 400,000 incubators and received more than a million letters from his customers.

OLD TRUSTY

The Incubator That Gives You The Most For Your Money

You can pay any price you like for an incubator. The Old Trusty is made of the best materials by my big family of factory employes. It is made for folks who want the best and are willing to pay a reasonable price to get the best. I could cut my price down to $6.99—sell twice as many incubators and make more profit on each—if I wanted to skimp on materials and workmanship. The Old Trusty is built to hatch eggs successfully for as long as you will want it. Read this brief description. The whole story is in the Old Trusty Book—*free*.

How It Is Made

Case—clear California redwood—powder-dry, without check, warp or knot in a thousand feet of it—no odor—heat and moisture do not affect it. Covered with first grade genuine asbestos, then covered with handsome galvanized sheet metal—making it the strongest, most substantial and most practical incubator case ever constructed. Made the same all over, top, bottom, sides and all—not skimped on the bottom.

Johnson's patented heating system is so simple that folks are surprised it wasn't thought of sooner. Heated water is discharged into main pipes at end opposite lamp—pipes made just the right size so that every part of the egg tray gets the same even degree of heat. Tank made of pure, heavy copper with crimped joints that don't leak—tested 30 pounds to square inch to keep defective tanks from leaving factory.

Regulator that makes all others look complicated and unreliable. Double wafer—out of the way when moving trays. Single adjusting nut sets it. When once right it stays right. No levers, or other "do-dads" to bind and get out of order or spoil the hatch. Top of incubator is clear—can use it to rest trays on when turning eggs.

I use the Edward Miller Sun-Hinge Burner because I have never made a better one and no one else has. Don't let any "special" burner influence you. I also use absolutely the most accurate thermometer made. It is guaranteed by the manufacturers and by me. I have seen cheaper thermometers that were wrong as much as seven degrees. That's why I make sure of accuracy by using the best. A good lamp and good thermometer cost more but they mean success and success is worth the slight extra cost.

Every part of the Old Trusty is made in the most careful way, of the best materials. Honest all through—just as Abraham Lincoln would make it if he were my partner in business. We make good machines and tell the truth about them even if we don't know how to use flowery language. Don't you want the Old Trusty Book? Be sure to mail postal card now.

It's a Book that Will Help You—Tells Real Facts—Contains No Theories

Johnson landed in Clay Center with 65c in his pocket. Went to work in a mill for $1.50 per day. Made incubators in spare time in boiler room. Old Trusty was a big success from the beginning. Neighbors all wanted it. Johnson smashed a lot of old ideas by practical, sensible demonstrations. Soon made artificial hatching popular and easy for everybody. Kept quality up and price down always. The facts are all told in the book. It is written in a simple way—easy to read and easy to understand. It tells how the Old Trusty is made and why it is made that way. It shows you a lot of ways to save money, and prevent trouble. It tells how to make a success right from the start without experimenting. It is plain and honest throughout. Shows hundreds of actual photographs sent in by owners of Old Trusty incubators—gives their names and addresses so you can write to them. Contains no guesses or theories. Every page is a sane, sensible sermon that will make you a better poultry raiser. You ought to read the Old Trusty Book. It is sent free to all who write for it. If you don't order an Old Trusty it won't make me feel bad. But nine out of twelve people who ask for my book buy the Old Trusty. That's because they are convinced of Old Trusty supremacy and I let them prove it at my risk.

On this page you will find some reasons why the Old Trusty is such a good incubator and why it costs you less than $10. But write me that postal now and I will send you all the reasons. When you get the book—if you read it and say it didn't help you—return it and I will pay you the postage and for your time. Address

Johnson—Incubator Man
Clay Center, Neb.

Over 400,000 People Are Making Money With JOHNSON'S INCUBATORS

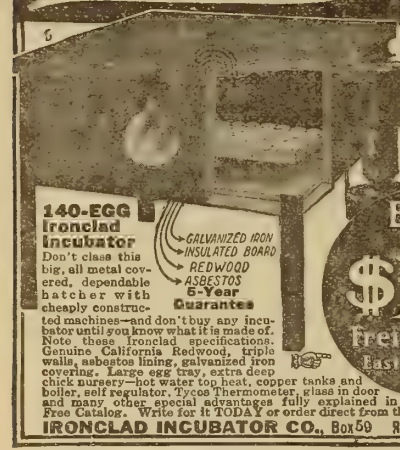
Johnson's Incubator has been on trial over 400,000 times. And it has made good. Think of it. 400,000 people, in every climate, in all parts of the country and under all sorts of conditions—have each made a success with the Old Trusty. Even boys and girls do it. Don't you think you can do it? Don't you think the Old Trusty is the Incubator you want—the incubator that will make the most money for you? You take no risk in proving it. I give you

30 to 90 Days Free Trial 10 Year Guarantee

That is the basis on which all Old Trusty incubators are sold. If you can't make a success with it I would much rather send your money back to you than have you disappointed. No one can say that Johnson ever gave anything except a fair, square deal. Send a postal for 1913 Old Trusty book, and read the whole story. Write me a postal card now.

Ironclad TRADE MARK

Wins in the Two BIGGEST HATCHING Contests Ever Held



Why take chances with untried machines when for only $10 we guarantee to deliver safely, all freight charges paid (East of Rockies) BOTH of these big prize winning machines fully equipped, set up ready for use? Why not own an Ironclad—the only incubator that has for two years in succession (1911 and 1912) won in the **greatest hatching contests ever held.** In the 1912 contest conducted by Missouri Valley Farmer and Nebraska Farm Journal, 2000 machines were entered including practically every make, style and price. With 140 egg Ironclad—the same machine we offer with Brooder, freight paid for only $10. Mrs. C. F. Merrick, Lockney, Texas batched 148 chicks from 148 eggs in 1912 contest

140-EGG Ironclad Incubator

Don't class this big, all metal covered, dependable hatcher with cheaply constructed machines—and don't buy any incubator until you know what it is made of. Note these Ironclad specifications. Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering. Large egg tray, extra deep chick nursery—hot water top heat, copper tanks and boiler, self regulator, Tycos Thermometer, glass in door and many other special advantages fully explained in Free Catalog. Write for it TODAY or order direct from this adv.

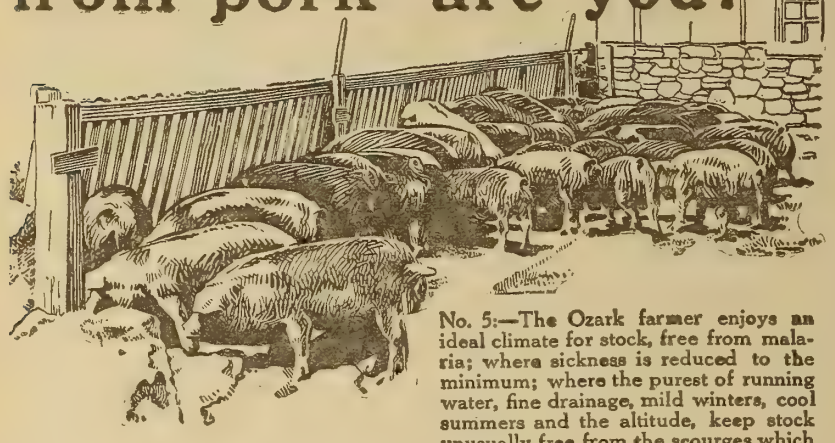
IRONCLAD INCUBATOR CO., Box 59 Racine, Wisc.

The Ozark farmer is making 5c a lb. profit from pork—are you?



THERE are five reasons why Ozark farmers get 5 cents a pound profit from pork—and they are the same reasons why stock raising of any kind in the Ozarks is so much more profitable than in other sections.

No. 1:—The Ozark farmer has good grazing from April 1st to January 1st—nine full months. Only 3 months of winter (mild at that)—no long expensive winter feeding and very little shelter needed.

No. 2:—The Ozark farmer can produce pork at 2 to 2½ cents per pound on cowpeas, alfalfa, peanuts, etc., which grow so well on these Ozark soils—only a little corn needed a few weeks before marketing, to make the flesh firm.

No. 3:—The Ozark farmer's city markets are so close by, that the net price offered him at his local market is greater than would be offered where the hogs would have to be shipped a greater distance.

No. 4:—The Ozark farmer is offered the highest prices prevailing anywhere—by the dealers in Kansas City, St. Louis and Memphis (price now around 8 cents).

No. 5:—The Ozark farmer enjoys an ideal climate for stock, free from malaria; where sickness is reduced to the minimum; where the purest of running water, fine drainage, mild winters, cool summers and the altitude, keep stock unusually free from the scourges which so often visit other sections.

James F. Crone, near Mountain Grove, spent $32 for hogs a little more than a year ago, and from that investment has sold pork to the value of more than $600; besides having meat for his family and 42 head on hand.

And think of the advantage in the Ozarks for dairying! Results speak louder than anything: E. T. Shelpman of Greene County, sold $1232 worth of cream and butter in a year from 12 cows; T. P. Emmons of Oregon County, sold $2,054 worth of milk from 20 cows; G. F. Holloway, who makes $10 per month per cow (and gets 65 bushels of corn per acre), says: "I find this country the best for farming and dairying, and I have been in nearly every State in the Union."

Even if you had to pay the same price for land in the Ozarks that is asked elsewhere, you could make greater returns from your investment there; but realize that right now you can get good land at $12 to $25 per acre. All in all, it's a proposition that ought to make any man want to *know more* about it now.

A free book for you!

It's not the kind you can pick up anywhere. Double sized pages, 75 actual photo pictures of farms—some in full color. Written by a man who knows farming. Takes up the Ozark sections, county by county, and describes the farming conditions there. Also tells actual experiences of Ozark farmers. I haven't many copies of this book on hand; please drop me a postal to-day for your free copy.

Trojan "More-Corn" Sorter

Wonderful Time Saving Money Making Invention

The Only Perfect Corn Sorter on the Market

Used by all the best farmers and recommended and used by experts and experimental stations. Perfect sorting is the secret. It's the sorter you should use to increase your corn yield to 40 bus. on every acre.

SAVES THE GOOD SEED, DISCARDS THE BAD. Increases both quality and quantity, sorts corn in uniform sizes so your planter will drop 3 good kernels to a hill 99 times out of 100. None other like it. Your boy or girl can operate it. Just fill the hopper, turn the crank and the Trojan does the rest. PAYS FOR ITSELF ON 4 ACRES. A small investment that is guaranteed to pay for itself on 4 acres. The price is cheap because it is sold direct from factory to you. Get my special low freight prepaid price, and my special free trial offer and guarantee. Write for illustrated circular and price today. Address

W. K. Voorhees, Mgr. Standard Mfg. Co., 402 State St., Cedar Falls, Ia.

cocks. This should be done about two weeks before the eggs are saved. The males should be perfectly healthy and active. If some can be selected which are known to have matured early, and are the offspring of good layers so much the better. Avoid inbreeding as much as possible.

The best time to tell the health and vigor of a hen is during molting. A hen that molts early and quickly, recovers and commences laying proves to have a strong, vigorous constitution. A pullet that grows fast and feathers early is generally a good layer. Only those that are fully matured and lay full-sized eggs should be chosen for the breeding pen. The breeding stock should be given grain in a litter and be compelled to scratch it out. The more scratching to be done the better. A variety of grain should be given together with green food and animal food. The hens must be prevented from becoming overfat which is one cause of the non-fertilization of their eggs.

Only those eggs of medium size and an average as to color and shape should be kept for incubation. An unusually large egg or a correspondingly small one is likely to be defective and cannot be expected to hatch. They should be collected as soon as possible after being laid, taking care to keep them from being chilled. They should be kept at a temperature of 60 degrees Fahrenheit, and partly turned every day. If the eggs have been shipped in, do not be in too great a hurry to get them in the incubator or under the hen. Leave them at least twelve hours in a quiet place with an even temperature (60 degrees Fahrenheit) in order to give the germ in the egg a chance to settle back to the normal as it has very likely been moved from its natural position. Freshness should also be considered, the fresher the better, but as a rule do not use the eggs that are more than two weeks old. Fertility of the egg may also be destroyed by being laid in nest boxes containing moth marbles. A little attention to these simple directions will make quite a difference in the possibilities of fertile eggs and will greatly augment the percentage of chicks. Mrs. A. F. Sorensen.

THE RAISING OF EARLY CHICKS.

What an alluring sound to the man or woman who has anxious eyes fixed on the coming season's fruits in the poultry yard! For we all know it is the early chicks that pay best, but, alas! we know also the many pitfalls in the way of "bucking against Nature" in our effort to forestall her regular time for hatching. But success is possible, as has been shown in many instances. To be sure, the way is strewn with failures, but the successes stand out in clear light, showing that victory is not out of reach.

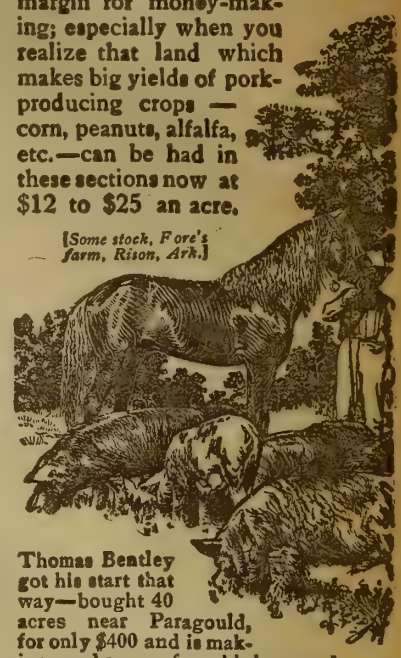
Experience shows that a few cardinal rules must be followed. Since Madam Biddy is such an unreliable quantity in the early spring or late winter in regard to broodiness our early chicks must of necessity be the scope of this article does not include the subject of the management of incubators, yet the importance of understanding how to secure the best results from their use must be emphasized. So much has been published along this line that the knowledge is available to all.

Our consideration of the matter begins with the time when the chicks are hatched. Really early chicks come at a cold, inhospitable time. The problem confronting us is to provide such temperatures and conditions as will best simulate those of the warm and balmy weather of the later spring time. Think of the temperature in which the embryo has been kept to bring it to the hatching point. The little chick is a very tender baby, and must be guarded against the possibility of a chill during the first weeks of its existence. Right here is the point where many make shipwreck. The annual loss in chicks is something so enormous that the United States should be ashamed of its record, and set about mending matters in a most vigorous fashion.

Most of the commercial chick feeds prepared by well-known and standard manufacturers are good. Care must be taken, however, not to keep any of this over from one year to the next, as stale chick-feed is apt to be disastrous in its effect on the

You can produce pork at 1½c per lb.

in Arkansas and Texas; and with pork bringing 8¢ to 9¢, there's a big margin for money-making; especially when you realize that land which makes big yields of pork-producing crops—corn, peanuts, alfalfa, etc.—can be had in these sections now at $12 to $25 an acre.



[*Some stock, Fore's farm, Rison, Ark.*]

Thomas Beadley got his start that way—bought 40 acres near Paragould, for only $400 and is making good money from his hogs and cows. His place is worth more than $3000 today. T. B. Fore of Rison, Ark., has lifted a mortgage off a fine 157-acre farm through his profits from hogs, cattle and horses. Mr. Fore raises *all his own feedstuffs*. All along the

Cotton Belt Route in Arkansas and Texas

you'll find many a man who is getting more profit *every year* than his land cost him. Gus Palmer, who lives just below the Arkansas line, near Shreveport, La., sold $2100 of alfalfa from 30 acres—a profit of $70 per acre. J. E. Gandy paid $3000 for an improved farm near Mt. Vernon, Texas; and the local people thought he'd paid too much. Since then he's refused offers of $7500 for his place.

These lands won't stay cheap always. They have already doubled in value since 1905; but even this year you can buy at $12 to $25 per acre, as good land there as you are farming now. And you'd have *every* advantage of schools, churches, close neighbors, good local markets, phones, rural free delivery, etc. This proposition deserves serious thought.

On the 1st and 3rd Tuesdays of each month there are low round trip excursions to Arkansas and Texas via Cotton Belt Route, allowing 25 days' time and free stopovers. Go on the *next* one.

bowels. A very good feed can be prepared at home. One formula is as follows:

40 lbs. cracked wheat.
40 lbs. finely cracked corn, sifted.
5 lbs. rape seed.
5 lbs. golden millet.
10 lbs. steel-cut oatmeal or pinhead oatmeal.

To this should be added a little fine chick grit and charcoal, and the whole well mixed.

Green food is another important item. Yet this is often harmful on account of improper feeding. Nothing should be fed in a wilted condition. Tender grass and dandelions, cut up as soon as gathered, are above suspicion. Lettuce is more doubtful, and should be fed sparingly. Doubtless the ideal food for these very early little fellows is sprouted grain. If the mass be cut into suitable sections to be put before them it will exactly simulate Mother Nature's offerings in the spring. They will recognize the value of this delicacy, and will dispose of it in a manner that will make evident their hearty approval. Indeed there has been scarcely a discovery in recent years that has such a bearing on the solution of the problem of raising early chicks.

They should not be stinted on their water supply, although it is not best to leave it before them for the first two or three days. I never take my chicks from the incubator until they are thirty-six hours old, strong enough to endure the change into a wider life. Although it is something of a digression I would say that my confidence would be badly shaken in any incubator whose nursery was not warm enough for the chicks to be kept in it this length of time. Test your machine with the thermometer. If it shows a temperature of 90 degrees while hatching is going on it will answer for the babies. If it is less than this they will have to be removed and kept warm in flannel-lined baskets by the stove. But they are not as well started in this way.

To return to the water question. When removing them to their new quarters I dip each little bill into water from which the chill has been taken. This is their first drink. At each feeding time the first two or three days the water is put before them, so that they may learn to help themselves. When they are old enough to have their chick feed always before them the water is also given. If green bone is fed it must be very sparingly. If good, fresh beef scrap can be secured it is safer. As time goes on the ration may be varied by giving suitable table scraps, odds and ends of cornbread, biscuit, bits of meat, etc., nothing very fat or salty should be given.

It goes without saying that cleanliness is absolutely indispensable to the welfare of these tiny early chicks. While they must be kept within doors this involves extra care and labor, but it is work rich in results.

It can be easily seen that the suggested method of feeding—letting the chicks help themselves at will from feed kept ever before them—is a great labor-saving method. When once it is adopted I am sure there will be no returning to the old way. As spring opens with its greatly increased output of chicks the relief it is to the busy, overburdened farmer's wife can scarcely be estimated.

The little fellows hatched so early should be lutsy, strong chicks by the time spring weather makes it possible to put them out of doors. What a delight and pride is a flock of youngsters, well started toward a vigorous maturity, at a time when general hatching is just beginning! Early fries bring a tempting price and help greatly in swelling the season's profits.

Subscriber.

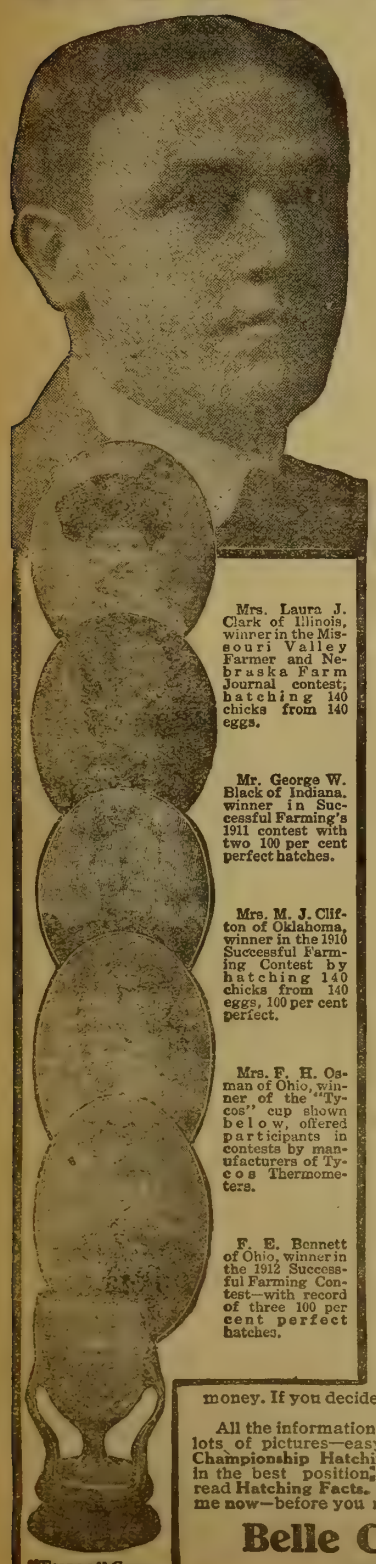
THE LEGHORN.

To the Editor

The Leghorn fowl originated in Italy and derives its name from the town of Leghorn, a seaport in that country, from which the first specimens were imported. As near as we can learn the first importation was about 1835. How long they had existed as a breed previous to that time it is impossible to learn. It is unfortunate that some of the early lovers of this variety have not written their history in a more full and definite manner as such a history carefully compiled would be very interesting reading to breeders of this variety. Very large combs was one of the striking features of these early-day Leghorns, some being known to reach six inches in height.

This will explain in some measure,

Here's What I'll Do—For Every Reader of the "Farmer" Who Writes Me A Postal



Mrs. Laura J. Clark of Illinois, winner in the Missouri Valley Farmer and Nebraska Farm Journal contest; hatching 140 chicks from 140 eggs.

Mr. George W. Black of Indiana, winner in Successful Farming's 1911 contest with two 100 per cent perfect hatches.

Mrs. M. J. Clifton of Oklahoma, winner in the 1910 Successful Farming Contest by hatching 140 chicks from 140 eggs, 100 per cent perfect.

Mrs. F. H. Osman of Ohio, winner of the "Tycos" cup shown below, offered participants in contests by manufacturers of Tycos Thermometers.

F. E. Bennett of Ohio, winner in the 1912 Successful Farming Contest—with record of three 100 per cent perfect hatches.

"Tycos" Cup

I WILL send you the most remarkable hatching facts ever published. I will make you the **lowest price proposition you ever heard of.** I will show you how to make championship hatching records and prove to you that you can make **greatest success right from the start** with a World's Championship Belle City—**prove with facts and figures its money-making power.** I will send you the reasons why the Belle City won six World's Championships and why no other hatcher has equalled its record. Won't you write me? I will send you my valuable collection of

World's Championship Hatching Facts—FREE

I have been advertising in farmers' publications for many years. I am proud to number thousands of readers of this paper among my **195,720 customers,** which also includes the **U. S. Government.** The remarkably low prices I am making this year is sure to bring me hundreds of new customers, because no one can buy a better hatcher or a better brooder, at any price.

I am proud of the fact that Belle City customers have won so many World's Championships; that the Belle City has won in contests totaling 10,000 hatches, against every other incubator made, many of them costing from two to five times more than my low price.

I am not asking you to take my word for it. Just write me and I'll put the facts, proof, figures and all information right in your home so you can judge for yourself. I want to tell you about the folks who won the World's Championship prizes—send you their letters telling how they did it and what they think of the Belle City.

I want to tell you how to be in a position to win Championships yourself and the prizes and benefits that go with the title.

I will send you proof that will leave no question in your mind as to the remarkable hatching value of the Belle City. I will tell you the secrets of construction and the advantages in design, that have made my Belle City the **Championship Hatcher of the World.** I leave nothing untold. I tell you everything because I am proud of everything connected with the Belle City.

I Want to Send You My 1913 Low Price on My 6-Time World's Champion Belle City

I will show you positively that my 6-time World's Champion Belle City **has everything worth having in and on an Incubator.** It has Double Walls with dead air space all over, the best self-regulator money can buy, cold-rolled copper heating tank and boiler, a real safety lamp, a big, roomy nursery, famous "Tycos" thermometer, a strong egg tray, a reliable egg tester and a complete book of instructions. It has every feature that made possible the winning of six World's Championships with 100 per cent hatches—by people who **never owned any incubator before they bought the Belle City.**

I'll tell you about my **World's Famous Belle City Brooder,** too. It's worthy of the Belle City Incubator. It is the only **Double-wall, Hot Water, Top Heat Brooder Made.** My price will surprise you. Then after you have read all the facts—should you decide to try a Belle City Incubator and Brooder—I will let you have them on

1, 2 or 3 Months Home Test Money Back Offer and 10 Year Guarantee

I want you to be the judge and jury and decide the merits of the Belle City by the evidence of your own eyes. I want you to try a Belle City outfit at my risk. I will send one to you on one, two or three months' home test. If it doesn't come up to what you expect—send it back and I'll return your money. If you decide to keep it, you are protected by my personal 10-year guarantee

All the information I want to send you is placed in convenient form—big type—lots of pictures—easy to read and easy to understand. **Don't miss my World's Championship Hatching Facts. There is no charge, no obligation.** You will be in the best position to select the **right** incubator and brooder, after you have read **Hatching Facts.** My sensational low price offer goes with my letter. **Write me now**—before you forget. Address Jim Rohan, Pres.

Protect Your Crops

By Doing Away With Dangerous Air Spaces

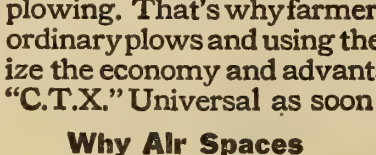
Many a fine crop has been shortened, yes ruined, because of air spaces left between topsoil and subsoil when plowing. That's why farmers everywhere are discarding ordinary plows and using the "C.T.X." You, too, will realize the economy and advantage of using the Rock Island "C.T.X." Universal as soon as you know all about it.

Why Air Spaces Prove Fatal

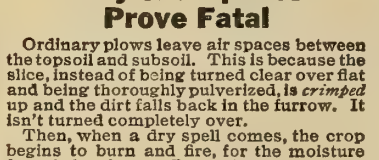
Ordinary plows leave air spaces between the topsoil and subsoil. This is because the slice, instead of being turned clear over flat and being thoroughly pulverized, is *crimped* up and the dirt falls back in the furrow. It isn't turned completely over.

Then, when a dry spell comes, the crop begins to burn and fire, for the moisture from below is cut off completely.

If the topsoil lay flat on the subsoil and there were no air spaces, moisture would come right up from below, just as kerosene comes up the wick of your lamp. Thus, during a long siege of dry weather, when no rain falls for weeks and weeks, your crop suffers but very little, because it will draw on the moisture from below.



AIR SPACE—Ordinary



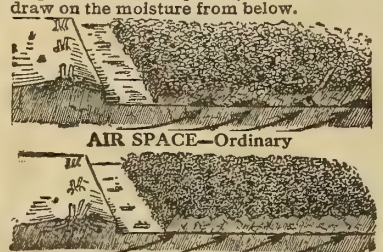
NO AIR SPACE—"C.T.X."

How the Rock Island "C.T.X." Universal Plow Ended Air Spaces

Now, the Rock Island "C.T.X." Universal has a very peculiar bottom—*corkscrew-like* in shape. A perfected, patented shape that is proving a boon to the user.

Instead of throwing the dirt *backward* and *upward*, this bottom sends the dirt *backward* and *DOWNWARD*. (The arrows in the pictures below show how dirt travels over an ordinary bottom and over the Rock Island Universal bottom.)

Thus, no dirt is spilled into the furrow and each slice is so thoroughly pulverized and so completely overturned, that your *top-soil* lies right against the *subsoil*. No air spaces between. All this sounds very simple, yet it has taken years of experience and study to realize what it really means and how to avoid it. It's the last big step to perfect plowing.



This Plow Carries Dirt Back — Ordinary Plow Throws Dirt Forward

A Truly Universal Plow

Nor is the solving of the air space problem all that this plow has done.

For here is a truly *universal* plow—the only *universal* plow in all the world.

You can work this plow in any field on your farm and do perfect work in *tame sod*, in *old stubble*, in *trashy cornfields*, in *meadows*, just *any place*. Makes no difference whether it's *gumbo*, *heavy clay*, *sandy loam* or *mixed soil*. Every slice will be turned over flat; all trash will be completely buried. Every furrow will be clean; and the dirt will be pulverized more completely than you ever thought possible, saving you at least one harrowing.

Do you wonder that the Rock Island "C.T.X." Universal quickly became such a sensation?

Do you wonder that, to keep up with the multiplying demand, it has taxed our factory and workmen to the utmost? That we have had to increase our factory output over four times?

Do you wonder that men who see this plow perform are discarding their old plows and using "C.T.X." simply from an economical standpoint? It's a fact.

The Price Is Reasonable

Notwithstanding the unusual demand for this plow and the fact that we own and control all patents on a plow that really has no competitor in results, *we have not raised the price.*

It requires greater care and is more expensive in construction, but enormous production enables us to get lowest possible factory cost so that it costs you practically no more than an ordinary plow.

Its great value to you is in the results—the increased crops—the saving in work and the far greater satisfaction and longer life.

FREE CATALOG Proper plowing is the basis of all farming. You, as a user of plows, should learn what the Rock Island "C.T.X." has done toward improving the plowing, increasing the crops without extra cost, and also saving labor. Give us your name and address on a card and we will tell you where you can see a Rock Island "C.T.X." Universal and you can judge for yourself, for your own knowledge and experience will show you why you can't afford to use any other. Write these words on a postal: *"I am interested in plows."* Then sign your name and address and mail to

ROCK ISLAND PLOW CO., 184 Second Ave., Rock Island, Ill.

why an occasional specimen at the present time should have an abnormal growth of head gear. It is simply the natural reversion to their original ancestors and should not be condemned as a serious fault.

In the year 1852 other importations were brought over. These, however, did not have nearly such large combs, but were extremely large compared with the present-day Leghorn.

The Leghorn is one of the oldest standard varieties, the browns and whites being the originals of this breed. In later years others have been added until now the present standard recognizes five distinct color varieties, viz.: Black, Brown, Buff, Silver Duck Wing and White. If we include shape we can add two more, Rose Comb Brown, and Rose Comb White. Besides these there are at least three or four in the course of formation not to mention the Golden, Silver Pyle and the Cuckoo as named and recognized by the fanciers' club, of England.

Little can be learned about their progress from the early fifties until 1873 when the American Poultry Association was organized and in 1874 the first Standard of Perfection was issued. What has transpired since that time is easily accessible to all by a study of old copies of the Standard. Perhaps there has been as much time and thought spent on the Brown Leghorn as any other breed in existence. At first they seemed to yield very slowly to the desire of fanciers, doubtless they had been bred in the original colors and shape so long, but in later years they have become more pliable especially as to color, until at the present time the fancier who thoroughly understands his flock can mate them so as to produce first-class specimens with a remarkable degree of certainty.

Their beautifully curved outline coupled with their dainty, genteel way will ever make them subjects for the most careful and painstaking fancier, while their genuine worth as egg producers will ever make them popular with the lover of fresh eggs and plenty of them, and the fact that their earlier history has never been carefully written does not detract a particle from their popularity. The Leghorn, while a breed of great promise, is not a breed for every man and every place. Put the Leghorn in its place and there is no fowl that can surpass it, but if subjected to conditions that are not suitable to their wants failure and disgust are inevitable.

The Leghorn is ambitious and always willing to work and if there is any scratching in sight they are in for it, no matter whether it is a heap of barnyard produce or a fancy pansy bed. Practically it is all the same to them. I once heard a breeder of Leghorns remark that "the chicks commenced scratching before they got both legs out of the shell," and I don't know but what she was right. It is possible that they do not start quite that early, but I know for a fact that they often start to scratch in the bottom of the basket w have carried them in when taken from the nest. They seem to know that it is very important for them to put in every minute at good, honest work and that is probably one reason why they are ready to lay when four or five months old.

Mrs. Frank Sorensen.

Nebraska.

EASY METHODS OF FORCING RHUBARB.

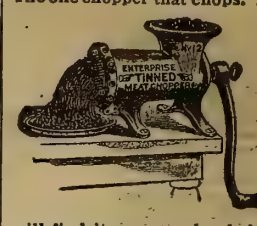
If you want rhubarb early when it is a good price at the groceries and even more to the winter clogged systems, get a supply of strong roots and plant in very rich, mellow ground, thirty inches apart each way and in a square plot. Knock the heads out of sugar or salt barrels or any old barrel or cask and set over your rhubarb hills. Pack fresh horse manure firmly in between the barrels and cover them with gunny sacks or cloth. The manure should be tamped well and be placed all around the barrels. It heats and warms the ground beneath and the air inside the barrels and forces the rhubarb into growth at once. The barrels cause the leaves to run up to the light and gives you long, tender stems.

L. H. Cobb.

FARM-MADE meat products mean bigger profits for you and very little extra trouble. Always a salable market. No other way offers such a fine opening as for you to do your own "killing" and marketing. Every farmer who does, needs an

ENTERPRISE Meat AND Food Chopper

The one chopper that chops. Does not mangle, squeeze or crush, but has a four-bladed steel knife that cuts fast and clean. Make sure of getting it by remembering "AND"—Enterprise Meat AND Food Chopper.



Your wife will find it an everyday help in the kitchen, too, for making the many delicious dishes that farmers' wives know all about. So easy to clean, too. It repays its cost almost every week. Enterprise Meat AND Food Choppers are made in 45 sizes and styles—hand, steam and electric power.

No. 5—Family size.....hand $1.75
No. 12—Farmers' size.....hand 2.25
No. 22—Farmers' size.....hand 4.00

We also make cheaper food choppers, but recommend the above. Send 4c for "The Enterprising Housekeeper," a fine 200 recipe cook book. Your wife will like it.

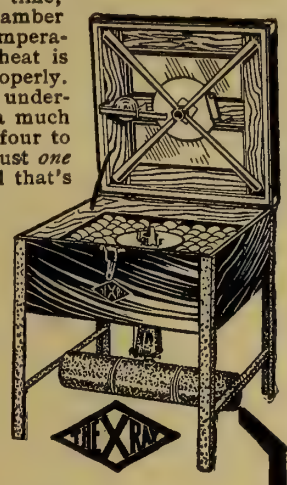
SURE HATCH INCUBATOR CO., Box 16 Fremont, Nebraska

Here's My Remarkable X-Ray Incubator That Uses Only One Gallon Oil to a Hatch

J. H. Kate, President of the X-Ray Incubator Company.

Requires Only One Filling of the Lamp

Now shipped *direct* to you from my big X-Ray Factory. No agents—no dealers. Guaranteed to please you. Orders filled *same* day received. I prepay freight *anywhere! Quick Service!* Here's the only incubator built on the *right* principle with the lamp *underneath* — square in the center — and *not* on the side as with *old-style* machines. With the lamp underneath on my X-Ray Incubator an even, regular temperature is kept all the time, *every* part of the egg-chamber is at proper hatching temperature — because the heat is distributed evenly and properly. In placing my oil tank underneath, I am able to use a much *bigger* one—it holds from four to eight quarts of oil — but just *one* gallon (four quarts) are all that's needed for an entire hatch. I *absolutely guarantee this!* And this big tank just has to be filled *only once*—not every single day as the old-style machines do. Now my *automatic trip*—an exclusive patented X-Ray feature—is the watch-dog on your oil bill. It is *really* a most wonderful regulating device, cutting down the flame *at the burner* when the egg-chamber gets too hot—and thus saving you all that excess heat that goes to waste in the *old-style* lamp-on-the-side machines. You never have to touch the regulator on my guaranteed-successful



X-RAY Incubator

"Built Different From All Other Machines"

Why? Because it is *automatic* and takes care of itself! The door of my X-Ray Incubator is at the *top*, and has two double-glass panels—so you can see the thermometer at any time by looking through the glass. You don't have to raise the lid and let chilly air in on the eggs. It is not necessary to remove or lift the egg-tray from my X-Ray Incubator during the hatch. Ventilate by simply raising the lid. So you save the time and labor of removing the egg-tray in order to turn or air the eggs. You save the danger of dropping a tray of eggs—because tray is *not* removed. You save getting down on your knees in front of machine and wasting matches trying to read the thermometer through a *side* door. You save *all* uncertainties in automatic regulation. My X-Ray Indicator shows whether heat is right or wrong—my thermometer is the most accurate and most simple to read of any ever placed on an incubator.

Get My Factory-Direct Price— Get My New Free X-Ray Book

Learn about *both* my machines—my X-Ray Incubator and my X-Ray Brooder. Brooder has same perfect heating system as X-Ray Incubator. It is easiest to clean—has best lighting and ventilating systems. Four windows — all slide — to ventilate. Makes a better home for little chicks than the old hen herself. But first get all facts about my X-Ray Incubator. Please bear in mind that I positively guarantee to save you three-fourths of the oil you would have to use with one of the old-style machines. Please remember also that my X-Ray Incubator is the only one built on the proven principle the lamp *underneath*. The X-Ray in your home means less of handling, less oil, less heat generated, absolutely no waste, no filling of the lamp during the entire hatch, no danger of "cooking eggs"—and an even, regular hatching temperature in the egg-chamber all-the-time. Instead of wasting the excess heat as all the old-style machines do—the X-Ray controls it.

Free Book No. 42 tells you all about X-Ray Incubators and Brooders. Just drop me a postal or a letter Today and ask me for this valuable book. I'll send it right back to you by return mail—and you'll profit both in dollars and experience by having done so. When you write, please address me personally. Sincerely yours,

METHODS THAT MAKE POULTRY MORE PROFITABLE.

(Concluded from page 3.)

the neighbor's rooster, both in the country and in towns, is a potent one, and one that will have to be dealt with. If the farmers in at least five of the central western states could be induced to remove the male birds from the laying flocks as soon as the breeding season is over, and keep them removed during this coming summer, it would save in each state over $1,000,000 cash. And this would be cash that would come in from outside the states, for the eggs of these states are largely marketed in the extreme East, extreme West, or extreme South.

It was found by the United States government investigators that where the farmers produced infertile eggs, collected those eggs twice a day in hot weather, kept them in a cave cellar where the temperature was below 70 degrees, and marketed them twice a week, keeping them out of the sun on the way to town, were able to have their eggs graded out 97 per cent "firsts." This means that for all practical purposes by taking reasonable care, that they would be able to add one and one-half cents per dozen onto the price of their eggs where three cents was the difference between "firsts" and "seconds." Figured one and one-half pounds to the dozen, it would mean that they would be able to get one cent per pound more for their eggs, and one cent added to the price of one pound of eggs, is just as much as one cent added on the price of beef or pork.

There are two ways to get rid of the male birds on the farm. One is to sell them as broilers when they weigh about two pounds, and are worth in the neighborhood of twenty-five cents per pound. I would like to call your attention to the fact right here that by the time the farmer ordinarily markets his roosters they weigh in the neighborhood of six pounds and are worth about eight cents, and bring him just about the same amount of cash that they would have as two-pound broilers, and, furthermore, they have eaten in the neighborhood of twenty-five cents' worth of feed, and brought a lot of eggs down in market value by fertilizing them. The second way to get rid of the male bird is to caponize him.

It is just as foolish to allow a male bird to grow up into a stag as it is to allow the male pig to deteriorate in market quality by becoming staggy. It is now possible to purchase instruments to perform this operation at a reasonable cost, and the skill required is little, if any, greater than with any of the other food-producing animals on the farm. The capon is an easier keeper from both the standpoint of maintenance and fattening, will not crow or quarrel and may be turned over at ten months, in the case of the American breeds, weighing around eight pounds at from sixteen cents to twenty-three or twenty-four cents per pound. It is advisable for any farmer who has mixed stock to caponize or sell their male birds while they are young, and buy thrifty, vigorous, pure-bred males of the breed and variety which he most admires, each year. He should be able to buy such birds as he wants for a couple of dollars apiece. At the end of the breeding season he will have gotten his money's worth for them in the flock of thrifty chicks that will be coming on, and should have disposed of them at whatever the market price may be. During nine months in the year on the general farm there should not be a single male bird found of breeding advantage.

A Place to Hang the Clothes.

There are some homes where trees are not handy for attaching clothes-lines, so a place must be made to support the wires. A frame for supporting the line can be made with but little trouble. Set three posts in the ground and put cross-arms to them similar to the cross arms on telephone poles. Then the wires can be stretched along over these. They will hold up all the big washings the housewife may have, and keep her in good humor all the while.

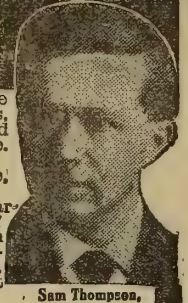
Here's the Only Guaranteed Incubator in the World



Sam Thompson, President

Investigate it thoroughly before you buy. Compare it with any on the market. Read the stories of success and profits made by Fairfield owners. Try it yourself on my 2-hatch trial proposition and you will be convinced that my Fairfield is in a class by itself, the most perfect incubator made. Perfect in material, construction and perfect in hatching.

These are not claims, they are facts and I back them with my guarantee, the fairest, squarest ever written.

First, I guarantee that the Fairfield is made right, that it works right, particularly, that it will hatch right, which means hatch 90% or better of all fertile, hatchable eggs or you get your money back. Now the question is, do you want a guaranteed Fairfield and some profits, or will you invest your money and experiment with any old kind and waste your time, spoil high-priced eggs and be satisfied with 50 or 60% hatches that you get with ordinary incubators. Think it over. At least investigate.

7 Years' Hatching Record Proves the Fairfield the World's Best Hatcher

Seven years ago the first Fairfields were built. They made good right from the start. They made hatching and poultry raising a certainty instead of guesswork. They established a record for big, continuous hatches that no other incubator has ever been able to touch. That's why the Fairfield today is known and recognized as the World's Best Hatcher.

Six years ago a Fairfield was shipped to Mrs. Wm. Evans, at Albion, Neb. During all this time she averaged 92% hatches and had absolutely no expense for repairs except 30 cents for new lamp burner.

Coxbill Bros., Deweese, Neb., bought four Fairfields last season and hatched over 2,000 chicks. In their recent letter they report that their old Fairfield bought 5 years ago still runs fine and hatches same as their new ones.

Thousands of similar reports are on file. We will send you some from your own community if you still have any doubt about it being the World's Best Hatcher. The quickest and surest way to convince yourself is to get my 2-hatch trial offer and try the Fairfield on my guarantee of your

Money Back If the Fairfield Does Not Hatch 90% or Better

The whole secret of the Fairfield hatching power lies in the construction of the machine. It's made of finest California Redwood with double wooden walls having dead air space between. The lid is made with special insulating material to retain heat. The heating system is of heavy copper throughout and so arranged that every part of egg chamber is of even temperature. In addition it has automatic heat regulator to insure steady, uniform heat, without requiring constant attention from operator. Each detail of Fairfield construction is correctly and honestly worked out. It cannot help but give satisfaction to everyone, either new beginners or expert poultry raisers, in any climate and maintain its reputation as the World's Best Hatcher.

You Can Own a Fairfield Free After First Hatch

The Fairfield costs no more than most of the ordinary incubators but the first hatch made with a Fairfield pays for it and leaves a profit besides. That makes the Fairfield a mighty good investment.

The Fairfield Makes the Chicken Business Pay.

It removes the guesswork and uncertainty and you get reliable results because you are working with a reliable machine. When you put 100 fertile eggs into a Fairfield you absolutely know you will get at least 90 chicks because that is my unconditional guarantee. I couldn't give you a guarantee like this unless my machine was as perfect as it is possible for human skill to make it.

AIRFIELD Incubator WINS.

The Great Missouri and Kansas Hatching Contest

The Farmers Mail and Breeze, to show the possibilities in chicken raising for profits, conducted an incubator contest among its readers. 1,500 people from Missouri and Kansas entered. Every known make of incubator was represented and Mrs. R. L. Decker, of Columbus, Mo., won first prize with a Fairfield which made a 99¼ and 100% hatch. That's simply another illustration of the fact that the Fairfield is really and truly the World's Best Hatcher.

Write for Free Catalog and Special Offer

Get the Facts About the Fairfield.

I've told my story giving as many facts as the space would permit. Now it's up to you to investigate thoroughly. The quickest way would be for you to write for my free catalog for my special 2-hatch trial offer and full details of my guarantee.

125 Egg Incubator and Brooder Both For $10

Freight Paid East of Rockies

Why pay more than our price? If ordered together we send both machines for only $10.00, and pay freight charges East of Rockies. Hot water, double walls, dead air space between, double glass doors, copper tanks and boilers, self-regulating. Nursery under egg tray. Incubator and Brooder shipped complete with thermometers, lamps, egg-testers—ready to use when you get them. Five year guarantee—30 days trial. Incubators finished in natural colors showing the high grade California Redwood lumber used—not painted to cover inferior material. If you will compare our machines with others offered at anywhere near our price, we will feel sure of your order. Don't buy until you do this—you'll save money—it pays to investigate before you buy. Send for FREE catalog today, or send in your order and save time. Money back if not satisfied. Write us today. Don't delay. (12)

WISCONSIN INCUBATOR CO., Box 119, Racine, Wis.

SLED THAT STEERS, FREE
YOU CAN HAVE ONE.

Send No Money

This is the greatest sled for boys and girls ever manufactured. Known all over the country as the "sled that steers." Runners are spring steel, and when you coast down hill a slight pressure of the foot curves them and steers the sled to one side. No digging in the snow with your heels or plowing the snow with your foot. Not one boy in a hundred has one of these sleds. You can have one for a little easy work. Write me today and I will tell you all about it.

A. M. PIPER, 840 POPULAR BUILDING, DES MOINES, IOWA.

Ewing's Great Superba and B. & C.'s Col. Sale, February 17th.

Perhaps no man connected with the Duroc business for so short a period has put more energy, time, money and brains into founding a herd of Duroc Jersey swine than our old friend, Bob Ewing, of baseball fame, who hails from New Hampshire, Ohio. In founding this great herd he was a wise guy. He consulted the best breeders, field men and auctioneers connected with the business and made his selections regardless of cost. In the first place, he bought the great boar, Superba, and then added B. & C.'s Col., champion of Iowa and Illinois, a litter mate to King of Cols., as an assistant. He then bought sows of the very richest breeding that were bred to mate right with these boars. He now offers as fine a collection of sows at public auction as will perhaps be sold this winter, and just to prove that Superba is breeding the right kind he will offer the great gilt, American Beauty, bred to B. & C.'s Col. To add to this already great attraction he bought ten gilts, the pick and choice of East Bros.' great herd, mostly by the great boar, Defender, bred to Superba. The sows listed in this sale are hand-picked sows by most every noted sire of the breed. Among these are sows sired by Defender, Superba, King of Cols., The Professor, Prince of Cols., Orion Chief, The Top Col. II., Highland King, King of Col.'s Ideal, B. & C.'s Col., Crimson Col., Instructor, Top Col. II., Helen's Chief, Defender King, Morton's Top Col., Volunteer, Ky. Col. and others. All in all it will be one of the most select offerings ever offered Duroc men at auction. Among these are many tried ones, including the great sow, Rainbow by Educator, out of a King of Cols. dam, that was first and senior champion at the American Royal. Other sows that have been prize winners on the eastern and southern circuits will be added as special attractions, and the gilts by Superb that can win next year in the biggest and best shows of America. It should be remembered that Superba is one of the richest Ohio Chief-Col.-bred boars in the world. In the show ring at the Illinois State Fair Superba never knew the meaning of defeat and it is said by many breeders that he is the greatest boar living today. His daughter, Lucy Superba, farrowed a litter that sold for $1,100, and she herself sold at $525 at auction. The top gilt in the Browning sale December 19th was a daughter of Superba and many other daughters of Superba have been able to top sales the past season. It would be well at this time for breeders who want blood of this noted sire to attend the Bob Ewing sale, for practically every sow bred to Superba to be sold this winter is listed in Mr. Ewing's catalog. All the choice gilts sired by Superba are bred to the great boar, B. & C.'s Col. This sale is the initial sale of the northern Ohio circuit, comprised of the best breeders in northern Ohio. It would be well to get off on the right foot and commence the week at Mr. Ewing's. Those who cannot attend the sale should send their bids by mail or wire to H. E. Browning, representing The Homestead, in care of Mr. Ewing. Colonels Igleheart, Reppert and Irwin, auctioneers.

Announcing Mouw's Great Sows.

Peter Mouw sells another great lot of brood sows this year at his farm, a mile north of Orange City, Iowa, on Wednesday, February 19th. It is not necessary to remark upon the record of the man whose single idea in breeding has resulted in the wonderful class of hogs which are known and used now in just about every section of the world where Poland Chinas are bred at all. His record speaks for itself and what we wish to do is merely to call the attention of breeders to the class of sows which he sells this year. For the most part they are yearlings which have raised pigs or well-grown fall gilts. Only a few spring gilts will be included, as the older sows are more certain to give good returns as breeders. There hasn't been a bunch sold at any sale on this farm where there was more size for their age and there are not many chances to get sows with show prospects before them. The most impressive thing in this entire lot of sows was the thrifty appearance they showed. They were extremely vigorous and active and showed size and smoothness both. No. 1 in the catalog is a yearling sow that has a finish and evenness of type which, with her size, make her the kind every herd needs. Likewise No. 3, a sow that for show type will head any list with honor. The sows by his famous Big Jumbo are a good lot, they have a great deal of the same big look about them and are a really well-made bunch. Big Jumbo represents the best efforts of Peter Mouw to date in his own herd. So well did he like the boar that he has several sons of the old fellow which give promise of making similar individuals when mature. One needs to put in a good word for Long Orange, however, for he has sired some very good sows, some that rank as high as any in the herd for smoothness of type, stretch and roomy build. There isn't a sow in this sale that does not look like a breeder of the best sort. Every one is roomy, every one looks vigorous and active and many were carrying their own guarantees the last of January. It is an interesting study in breeding to follow the history of the development of this herd. Peter Mouw knew exactly what he wanted and when he was fixing the type of his hogs he went wherever he could find hogs that came near what he was after, and he was not afraid of any breeding if it had the characteristics he was after. When, after his years of breeding and selection had made his hogs produce uniformly the qualities he sought, the demand came for the type Mr. Mouw had had his faith in all the time, regardless of fickle

Clover Seed

OUR Sterling grades of Northern Grown Clover Seed are the hardiest produced. This seed is grown from plants which have survived the extreme cold of winter and the alternate freezing and thawing of Spring and Fall. By planting our vigorous seed, Clovers may be established in Northern sections where until recently it was not thought possible for them to thrive.

Laboratory tests for purity and germination determine such seed as is worthy the name of Sterling. This grade is 99½% pure, insuring freedom from weed seeds. Sterling grade seeds are sold only in sealed bags bearing our name and trade mark.

STERLING SEEDS

Sold by 15,000 Merchants

The best merchants in all localities sell our lines of garden, grass and field seeds, including clover, seed grain, seed corn, etc.

If no dealer in your community sells our seeds, and will not get them for you, send us your order direct, and we will see that you are promptly supplied.

Full Information about Clover in Our 1913 Catalogue

This book contains 144 pages filled with illustrations and descriptions of seed best worth growing. Every planter large or small should have it. Mailed free to any address on request.

APRON PATTERN GIVEN

This is the best apron pattern ever offered and it is something every lady needs. All new subscribers to

People's Popular Monthly

will receive one free. This is a prize pattern. Takes 4½ yds. of material one yard wide. Only 2 buttons. Small, medium and large size. People's Popular Monthly is a fine, 32-page beautifully illustrated home magazine, for women and girls, filled with bright, interesting stories and well edited departments on Fancy Work, Home Dressmaking, Cooking, etc. It would be cheap at 50c a year, but in order to introduce it to new readers we send the People's Popular Monthly a full year and the apron pattern for only 25 cents. Address,

PEOPLE'S POPULAR MONTHLY,
211 Grand & 3rd
Des Moines, Ia.

public fancy he had a herd that would produce the qualities sought uniformly, and could be depended upon to do it regularly. His breeding has always been in the same direction and today the list of big hogs that have made great records which were either bred at Mr. Mouw's or from ancestors of Mr. Mouw's breeds shows anyone who looks at it fairly that buying here is buying at the fountain head of this type. The list of great boars, only a partial one at that, is given in the advertisement and shows what has really been done. Cols. J. A. Benson and Ira Cottingham, auctioneers. Ray L. Gribben, representative of The Homestead, will be at the sale and will give conscientious service to those sending him either mail or wire bids. For catalog address, mentioning The Homestead, Peter Mouw, Orange City, Iowa.

Isaac's Big-Type Durocs.

On Wednesday, February 12th, J. D. Isaac will hold his annual winter sale of big-type Duroc Jersey brood sows at Ded Oak, Iowa, and he will show the breeders fifty-two head of as big sows and gilts as will go through a sale ring this winter. In last week's issue we went into somewhat lengthy details about Mr. Isaac's offering and gave the breeding of the same. The boars he now has at the head of his herd are Jim's Mogul, a line-bred Critic boar and a good one of the strictly large-type kind. Another is Iowa King, a son of C. E.'s Col., and the other two are Great Crimson, a son of Big Crimson, and Valley King 3d, a son of Valley King II. No. 1 of his catalog is Valley Lady, a daughter of the champion boar, Valley King, and she is bred for a March 17th litter o Jim's Mogul. Running through his entire offering is a line of big-type breeding and, as Mr. Isaac is a good feeder and caretaker, you can rest assured they will be big enough to suit anybody. Write for his catalog and make it a point to attend his sale. Remember the date, Wednesday, February 12th, at Red Oak, Iowa, in the new heated sale pavilion. Kindly mention The Homestead when writing for catalog.

Cockerton's Sow Sale.

On Tuesday, February 18th, James Cockerton, Whiting, Iowa, will sell fifty of his big Poland China sows and his offering is one that is always good. We never saw him put up a poor offering and, take our word for it, he will show you a splendid offering in his forthcoming sale. The sows he is selling in this sale will be bred to Big Wonder, a good son of Smooth Wonder 2d; Orange Jumbo, a son of Big Orange; A Defender by Big Defender, and Cloverdale Wonder, a grandson of Longfellow P. He is selling seven tried sows in this sale that are hard to beat. Among these is Long Mollie by Long Chief, that is about the largest sow that will be sold in the West this winter. A spring gilt out of her that goes into this sale is also one of the largest and the best gilts that will pass through a sale ring this winter. He is selling two splendid daughters of Smooth Wonder 2d and another good sow called Wonder Maid by Chief Price Jr. Eleven fall sows by his well-known prize-winning boar, old Sioux Chief, will be attractive things in his sale; also a few by Victor's Model are very choice. He is selling thirty-one good gilts by Big Wonder and Orange Jumbo and these are good. That good Smooth Wonder sow we referred to above is Lady Wonder and she is two years old. She was the second choice of the litter that sold in the Hancher sale for $915, and she goes in bred to Orange Jumbo. The Long Molly sow that we spoke of is an outstanding sow, as is also her spring gilt by Big Wonder. His offering is strictly first class in every way and it will be a good sale to attend. When writing for his catalog kindly mention The Homestead. M. T. White will represent The Homestead at the sale and any bids sent him will be looked after on day of sale.

Van Patten & Son's Duroc Sale.

On February 19th will occur the annual sale of Duroc Jersey bred sows that will be made by Gilbert Van Patten & Son, Sutton, Neb. The sale will be held on the farm, one mile from town, as has always been the custom. This is a sale that the breeder of good Durocs can scarcely afford to miss. It is a sale that is deserving of the support of all Duroc men, for Van Patten & Son have fought the fight of the breed all along the line and have certainly done much to further the interest of every breeder of red hogs in the country today. The show record of this herd will compare with the very best of the county, and where show stuff is produced is the place to buy them. This offering is one of the best ever sent out from this herd and will contain a rare lot of choice stuff. The great sire, Uneeda Crimson Wonder, is liberally represented, both in get and by sows bred to him. He is without question one of the great boars of the breed. He is the type of hog that has always appealed to the writer, for he is big and long and sires stuff with great stretch. His daughters are invariably good mothers and good individuals and they are big. This point of size is one that Duroc men generally may well consider, for it is on this very point alone that the Poland China breeders are doing business today. It is not necessary to breed them big without regard to quality, but when one can get the size that they may with the get of Uneeda Crimson Wonder and also get the quality that they can secure with the same animal, they certainly should be well fixed. A number of daughters of Golden Rod King, the 1910 champion, are included in the sale and they are bred to Uneeda Crimson Wonder. The choice stuff in this sale sired by Uneeda is mostly bred to Model Wonder, a son of Golden Model 4th. His dam was by Wallace's Wonder by Crimson Wonder Again We believe he is the best possible selection to mate on the Uneeda stuff and we believe our prediction will come true. Model Wonder is certainly a very promising young boar, was the writer's choice of the under six months' pigs at the Nebraska State Fair last fall, although he did not get a place. With the possible exception of the young boar, Crimson King, owned by H. H. Koenig, he is the heaviest-boned pig in the country. The gilts in the sale are surely big and stretchy, weighing around the 300-pound mark, and not fat. They could easily be loaded with fifty to seventy-five pounds and only make them look well, but they are the better to not have it. The writer would like to see a good attendance of breeders at this sale. These are breeders' hogs and the sort that are profitable to buy. This sale is the day following the Geo. Briggs & Sons sale and the train connections are of the very best. Hotel service is good and these two greatest of all western sales should bring out a good number of breeders. Those unable to attend should send bids to J. C. Price, Homestead representative, and the best possible selections will be made. If you do not have the catalogs of these two great sales send for it at once.

POINTERS.

—B. L. Crowell, Rudd, Iowa, is naming a price on Barred Plymouth Rock cockerels in his advertisement appearing on this page.

—Plainview Stock Farm, Colfax, Ia., are offering Mammoth Bronze turkey toms and pullets, extra fine birds, for sale in their advertisement which appears on this page.

—W. C. Sundermeyer, Rake, Iowa, has thoroughbred White Plymouth Rock cockerels that he is quoting prices on in his advertisement which appears on this page.

—White Orpington cockerels and pullets of the Kellerstrass strain are advertised for sale by Mrs. Geo. H. Elliott, Ottumwa, Iowa, in her advertisement on this page.

—Geo. W. Stewart, Floyd, Iowa, is naming prices at which he can furnish Homestead readers with Mammoth Bronze turkey toms and hens in his advertisement on this page.

—Mrs. W. S. Kern, Plainfield, Iowa, breeder of Barred Plymouth Rock cockerels, writes that she still has some fine cockerels for sale. Her advertisement will be found on this page of The Homestead. She also is offering eggs in incubator lots for sale.

—F. H. Houghton, Marshalltown, Ia., is offering Barred Plymouth Rock cockerels of both matings for sale in his advertisement which appears on this page. He also will have eggs for sale in season. A few fancy Black and Buff Orpington cockerels and females and eggs in season are offered for sale in his advertisement on this page.

—J. Russell Lang, Brooklyn, Iowa, writes: "I can't fill any more orders for Single Comb White Leghorn cockerels. My advertisement has only been running two weeks and I have shipped birds to Nebraska, Kansas and Iowa. I still have a number of Ringlet Barred Plymouth Rock cokerels on which I will make special prices if taken soon." See advertisement on this page.

A. B. Walton, Wilton Junction, Iowa, writes: "Discontinue advertisement for Single Comb Rhode Island Red cockerels, as I am all sold out. I am booking orders now for eggs. My stock are fine and large and of a dark red color and from an extra good laying strain. I got splendid results from my advertisement in The Homestead, two to one of any other paper." See advertisement on this page.

—"The Barred Plymouth Rock cockerels I am offering for sale," writes H. B. Simpson, Albany, Ill., "are of the Bradley strain and are a very finely marked bunch with extra heavy bone. They weigh up to nine pounds and score as high as 91 points. My Single Comb Rhode Island Reds are very nicely marked, weighing up to eight and one-half pounds, and scoring as high as 92 points. These birds were scored by a competent judge and will be priced reasonable according to score." See advertisement on this page.

HOW TO HANDLE COWPEAS.

To the Editor

If you have space in your columns I would like to offer my objection to your advice given a Kansas subscriber in regard to cowpeas. In the first place you advise sowing one-half bushel per acre which I think is not enough. I have planted about that amount in three-foot rows and cultivated them where I was working for the yield of seed and find that this way will make considerable more than broadcast. But for hay and soil improvement I use five pecks per acre put in with a grain drill and very much prefer this way for soil improvement, as it gives better root system.

Then you advise plowing under the crop. I object to plowing under as valuable a crop of hay as the peas would make. If the crop could be cut and cured for hay and a cover crop of rye sown after the peas were removed, then the hay could be fed to stock and the manure returned to the land. In this way the full feeding value of the crop would be saved and if the manure is properly handled probably 90 per cent of the manurial value of the crop would be returned to the land. The following spring the rye should be turned under which will give a good deal of humus to the soil and follow with peas again. In this way a good lot of winter pasture can be had and a paying crop secured instead of losing the use of the land for one season.

My method of curing pea hay is to cut when the pods begin to turn brown, rake into windrows the next day and the following morning after the dew, is off, turn the windrows over with the same rake, then in the afternoon put into shocks and let it stay until cured. When a handful can be taken from the center of a shock, and no juice twisted out of it, it is ready to go to the barn. If the crop is handled in this way you will have hay that is second to none. I put up several hundred bales right from the field last summer, dragging the shocks to the press with a mule. I handled it the way I have described, letting it stay in the shock about ten days, and have as nice hay as I ever saw. It must be remembered however, while peas are great nitrogen gatherers they draw on the supply of phosphorus.

I think if your Kansas subscriber will handle his field this way for about two years then after the second crop of peas is removed, disk the land well and seed to small grain, using a liberal amount of high-grade phosphate, it will not take an expert to note the increase in yield.

J. A. Bradford. Jr.

Lauderdale county, Tenn.

THE SHREDDING OF CORN FODDER.

The following communication from one of our Indiana subscribers, Will Meyer, conveys some interesting information on the problem of shredding corn:

I have read several articles in your paper recently in regard to handling a corn crop and will say that I think the only way to handle fodder is to shred it.

I will admit that shredding requires a cash outlay, while husking by hand can be done by the owner of the crop himself if he sees fit to do so. Corn and fodder also have to be well cured and dried out to shred and more help is required. However, you will lose time and money if you do not have help enough and it is on this point that I want to give you my experience as to how my neighbor and I overcame this difficulty.

We had about thirty acres of corn and we knew our chances of hiring a shredder would be slim. Also that we would have to hire most of our help, as there were not enough near us who cared to shred, so we decided to run an outfit of our own. My neighbor had an eight-horse gasoline engine and I bought a two-roll shredder and we started to work. We set our machinery, backed our corn wagon under the elevator and then each of us took our wagon with rack on and started for the cornfield. Each one loaded his own wagon, the other one handing up the corn. When both wagons were loaded we drove up to the shredder and each one would unload his own wagon, the other feeding the shredder. When our corn wagon became full we unloaded the grain in the crib and went back to work.

In this way we cribbed from sixty to seventy-five bushels in a day and finished our thirty acres in about fourteen days. By this method two of us handled our entire corn crops and we like the plan very well indeed.

It must be conceded that an enormous task would have been involved in husking out this thirty-acre field of shocked fodder. We venture to say that instead of the work being done in fourteen days as was the case in this instance it would require all the spare time that could be made available during the entire winter season and furthermore the shredded fodder either in the stack or mow will keep in much better condition than if it were in the shock in the field. Where a plan like that suggested by Mr. Meyer is carried out it solves the help problem in an ideal way so that the corn is quickly put in the crib and the fodder stored in such condition as to give it the highest possible feeding value.

$50 Course Free

Learn to Run and Repair Automobiles
By the Sweeney System of Practical Experience

You can earn from $1,000 to $5,000 a year in the Automobile business. Thousands of men wanted for chauffeurs, mechanics, demonstrators, salesmen, garage managers, repair men, etc.

THE demand for competent men is more than double the supply. That's why the auto business pays the biggest salaries today. Millions are invested in the manufacture of automobiles. One company alone has orders for 120,000 cars for 1913 delivery. Three hundred thousand is a conservative estimate of the output for the year. Thousands of dollars will go to the men who handle this product and thousands more will go for repairs, storage, chauffeurs, etc. Get into the business and get your share of the money. No hard work in the auto business. You don't have to get up at four o'clock in the morning and work till dark; no drudgery, no chores. No hot summers and cold winters to endure. Instead you will have short hours, easy work and regular pay. You get paid for what you know, not for the work you do. Live well, dress well, a chance to travel and see the world, stop at the best hotels with all expenses paid.

Now to get you to investigate the wonderful opportunity I am offering you I will give for the next thirty days a free scholarship in traction engineering. If you are mechanically inclined, or if you want to get into the most profitable trade in the world, sign the coupon and mail today, and I will send you my big free catalog and free scholarship certificate. Remember, the Sweeney system makes learning easy in six weeks because we teach the right way—letting you work with your own hands on real cars. It's the simplest, quickest, surest and most thorough way of learning this splendid business.

E. J. SWEENEY.

Salesman $250 Per Month.

Repair Man $1.00 Per Hour.

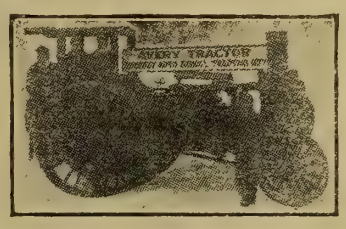
Demonstrator $150 Per Month.

Chauffeur $125 Per Month.

We Own Two Traction Engines.

Get one of these free $50 courses in gas traction engineering. Enormous demand in every farming community for engineers. Factories want demonstrators. We teach you by actual work on a traction engine and put you in touch with factory managers who have told us they will take all the trained men we can send them. Here is a wonderful opportunity for any young man mechanically inclined. You can learn by practical work in a few weeks. Remember we give this course free!

Engineers $5 to $10 Per Day.



No Books Used FREE Tools Furnished

Barney Oldfield Endorses Sweeney.

Dear Sweeney: I consider yours the most completely equipped Automobile School in America. I have visited many schools in my travels, but yours is far ahead of any I have ever seen, as you teach the mechanical end in a practical way, which, in my estimation, is far ahead of learning it by books and charts. You know me.

BARNEY OLDFIELD.

Earn More Money.

The object of this offer is to advertise the Sweeney System and this new branch of work which will naturally be handled by an automobile man.

Six weeks after the day you enroll in my great practical school you will be prepared to properly repair any automobile made and drive any car or truck or open a garage and repair shop of your own. You can learn the automobile business thoroughly because the

"Sweeney System"

is the most thorough, practical, interesting course of automobile instruction, and embraces every point worth knowing, including vulcanizing, brazing, oxy-acetylene welding, lathe work, machine shop practice, testing and road work, etc. You learn by doing the **actual work on real cars** with your own hands under the watchful eyes of experienced instructors.

Get My Big Catalog.

This spendid illustrated book is in itself a liberal education. Tells all about the Sweeney System. Gives names of hundreds of successful graduates. In a most fascinating way relates the experience of hundreds of young men who came to this school. Explains how we combine a machinists' course with the automobile course without extra charge. Why we don't teach from books, charts and theory. But how we do teach by giving you practical work and actual handling of cars. (We have on the floor 41 cars including Fords, Buicks, Jacksons, Overlands, Ramblers, Cadillacs, White Steamers, Packards, etc.) **All tools are free.** One charge, no extras. This catalog shows how easy it will be for you to get into the best paying business in the world. Howwe teach you to run a business of your own successfully. How we make you a dealer, or secure you a good position.

RAISE MORE CORN

EMERSON CORN PLANTERS

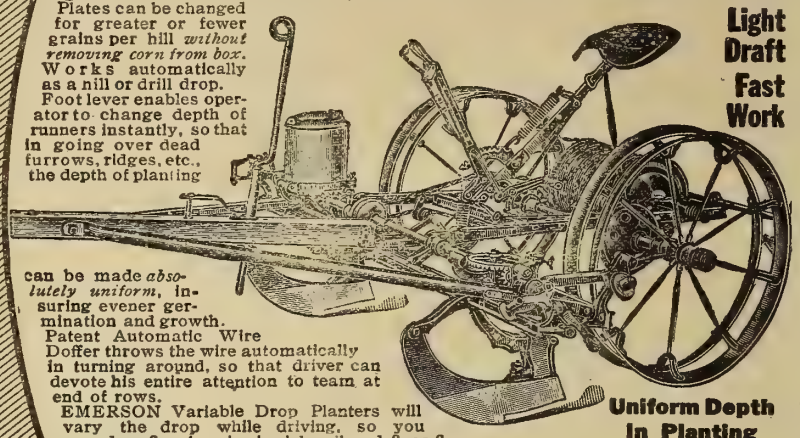
PLANT MORE ACCURATELY

THE EMERSON Edge Drop Planter shows by actual comparative tests that it has a *more accurate drop* than *any other*. This means even stands, no "skips", more corn.

The *reason* is because the EMERSON patented Seed Box and Plates are *different*. The plates are larger in diameter than others, and allow *ample* time for corn to enter the cell, no matter how much the corn varies in size or how fast you drive. You can plant more acres per day with the EMERSON, because the Emerson is a *very* light draft planter. It is easy to get an even stand and accurately checked field with the EMERSON.

Open Center Wheels of the EMERSON pack the dirt firmly *around* the corn, but not *over* it. This leaves the top ground *loose* for *easier* and *earlier growth!*

Plates can be changed for greater or fewer grains per hill *without removing corn from box.* Works automatically as a nill or drill drop. Foot lever enables operator to change depth of runners instantly, so that in going over dead furrows, ridges, etc., the depth of planting can be made *absolutely uniform*, insuring evener germination and growth. Patent Automatic Wire Doffer throws the wire automatically in turning around, so that driver can devote his entire attention to team at end of rows. EMERSON Variable Drop Planters will vary the drop while driving, so you can drop 3 or 4 grains in rich soil and 2 or 3 in lighter soil if you wish, insuring maximum crops.



Light Draft Fast Work

Uniform Depth In Planting

Our Free Planter Book

illustrates and describes fully the many superior advantages of the EMERSON Edge Drop Corn Planter, the EMERSON Variable Drop Corn Planter, the EMERSON Planter for Corn, Kaffir Corn and Milo Maize, the EMERSON Planter for *Cotton*, Kaffir Corn, Milo Maize and Sorghum, the EMERSON 3-Row Drill Planter. All of these Planters are backed by the 60-year-old EMERSON reputation for *highest quality*. It *pays* to get the *best*. Don't wait until the last minute. Drop us a postal NOW for the EMERSON catalog on *any farm machine you want*, then you will have plenty of time to investigate fully and *make sure* of getting the *best*.

HIGHWAY IMPROVEMENT.

The question of improving the highways of the state is one not only of general interest, but of practical importance. Three years ago I called a good roads meeting to be held in Des Moines and to be composed of county officials and representative men of the various counties and of the commercial organizations of the state. The meeting was well attended and much interest was mainifest, but there were divergent views and a wide difference of opinion as to the methods to be pursued. However, an organization was formed and annual meetings thereof have been held with increasing interest. Great good has been accomplished and harmony of action has resulted. The recent session of this organization has with practical unanimity recommended and through its committee will present to you several important matters of which I ask your careful consideration, and among which are the following:

To submit to the people of the state at the next general election the question of a bond issue for road improvements.

The levy of a one-mill tax for the state aid in the improvement of highways.

The establishment of a permanent state highway commission with adequate powers.

The appointment of a county engineer in each county by the board of supervisors thereof, subject, however, to the approval of the state highway commission.

A classification of rural highways.

A compulsory drag law, a non-divertible drag fund and simplifying and making effective our present laws on road dragging.

A recodification of the road laws of the state.

Heretofore I have emphasized the importance of properly dragging, grading and draining the roads and making use of materials at hand, because I did not believe that our people were ready for anything more, and also because those things constitute the first principles in the construction of any kind of roads. By the above means we have greatly improved the highways in almost all parts of the state, but I believe we have now arrived at a period when, without in any degree lessening our efforts along the lines of improvement above suggested, we ought to begin the construction of permanent roads of stone, gravel, etc. As evidence of the fact that there exists a great deal of sentiment with reference thereto I have had presented to me by F. J. Tishenbanner, Gilmore City, contracts signed by individuals and commercial organizations representing every city and town along the entire length of the road from Des Moines to Spirit Lake, a distance of more than 200 miles, the signers of which agree to have hauled and deliver on the road free of charge, crushed stone sufficient to construct a stone road along the entire length of the route, if the stone is furnished to them at the various railway stations without cost. If this expression represents the feeling of the people of the state generally, and I have no reason to believe that it does not, something ought to be done to afford opportunity for using this volunteer labor.

It has been suggested that bonds be issued to aid in the construction of permanent roads. There certainly could be no harm in submitting the question of a bond issue to the people to let them decide whether they want to issue bonds or not. It has also been suggested that a general tax levy of one mill be made. This would not be burdensome, but would yield, on the basis of our present valuation, only about $750,000. This is only about 50 per cent in excess of the amount that is now raised by the license on automobiles, and inasmuch as a great deal of the value of the automobile license is practically lost because of the wide distribution that is made of it, I would suggest that instead of one mill levy you so amend the law as to place the expenditure of the automobile fund in the hands of a central authority.

If we are to undertake the construction of permanent roads it is necessary that we have a permanent and active state highway commission and this commission should have charge of the expenditure not only of the automobile license, but of any other funds which the state may raise or

A valuable Free Book on

CLOVER

A gold mine of information

We have just published a wonderful new book entitled "Clover, the Great $Cash Money Crop$." This book is truly a most remarkable source of information on the subject of clover raising. For the first time the opinions and experiences of the world's greatest clover authorities and practical growers have been gathered together in printed form. Every question you can think of is fully answered. It tells you how to get a sure "catch" first planting; how to keep clover in the rotation; about clover as a soil enricher: how to handle the crop for hay and seed production; how to grow clover that makes richer feed—that produces more beef and more milk—that puts immediate cash money in your pocket. It explains the cause of clover failures; how to avoid winter killing; how to prevent ground heaving; how to guard against the loss from heat and drought; it tells all about the causes of "clover sickness" and how to deal with it. These and hundreds of other questions are answered, covering sixteen clover varieties, including Red, Mammoth, Crimson, Alsike, Sweet, White, Yellow, Japan, Berseen, Burr, Serradilla, etc.

This book is a gold mine of information to the farmer who is looking for bigger and better results. Ordinarily this book is sold for 35 cents per copy, but for a short time we will mail a free copy, postage prepaid, to the readers of this paper, or until a certain number have been distributed. If you will write at once you will be sure of getting a copy by return mail.

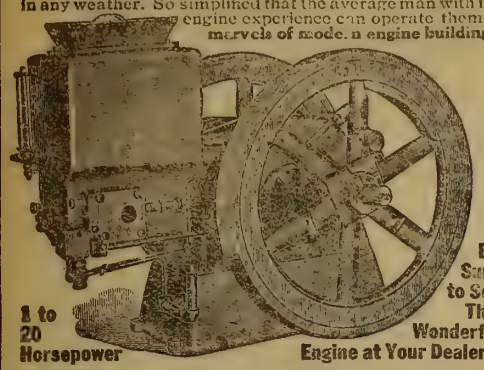
Get a Good Engine— You'll Use It a Long Time

Choose your farm engine for its economy in use of gasoline, its sturdy power to stand up under abuse, its durability in long service, and you will get the engine that saves and makes most money for you per year on your farm.

We manufacture exclusively a complete line of engines for all farm purposes. We design and make them in our own factory and put into them such superior material and such extreme care in ma. ufacture that Fuller & Johnson Engines are famous everywhere for their wonderful quality and economy of operation.

"Double Efficiency" Farm Engines

offer the greatest value per dollar in the engine world today. Each one is backed by the honest Fuller & Johnson Satisfaction Guaranty as to price, durability, steady service and moderate operating cost. We could not build them better if we asked double the price. They are reliable under any extremes of heat or cold. Frost-proof, and will start easily in any weather. So simplified that the average man with no engine experience can operate them—marvels of mode. n engine building!



1 to 20 Horsepower

Be Sure to See This Wonderful Engine at Your Dealer's

The "People's Price" Engines for Economical Buyers

Absolutely the lowest prices at which engines possessing the Fuller & Johnson workmanship and high quality of materials can be produced and sold. Built in 1¼, 2¼, 4, 6 and 8 h.p. sizes, portable and stationary. Strong, simple, powerful and worth double their low cost.

The Fuller & Johnson Farm Pump Engine

FULLER & JOHNSON FARM POWER

known the country over for its wonderful work as a labor lightener. Saves the women work. Ample power for pumping deepest wells, or running any kind of light machinery. Sold complete—no extras to buy. Ask us about it, and the other money-saving Fuller & Johnson Farm Power Specialties. You will be amazed to learn what they are doing for others.

DEPT. 118 6 East 11th St., Kansas City, Mo.

CENTURY WARRANTED FOR 25 YEARS

provide for aid in road improvement. If the automobile license was to be thus used it would be immediately available, whereas the return from a tax levy would not be available until 1914.

In my discussion of the employment of prison labor I have suggested the use of convicts in road building and also in furnishing and preparing stone to be used in highway construction. If you will therefore, provide for the use of the automobile license or provide some other funds for paying the freight on material with such volunteer labor as has been above suged in delivering the stone on the roads and with convict labor for use in building them many miles of permanent road may be made at very low cost. Means should also be provided for the purchase of asphalt or other material to be used as a binder, as it is generally conceded by those best informed in the matters of road construction that loose stone or gravel will not resist the wear incident to automobile travel. I trust that you will give the subject of better roads most thoughtful consideration and write into our laws some effective legislation with reference thereto.—[Gov. B. F. Carroll's message to Iowa legislature.

GROWING GREEN THINGS.

To the Editor of The Homestead:

We often wonder why so many people still follow the practice of buying their vegetables from the groceryman when it is so easy and delightful to grow ones'own green, crisp, tender vegetables in springtime and summer. Our garden has been more to us than any other such a size spot of ground on the farm. It is the height of our ambition to grow a better and earlier garden than any of our neighbors. When springtime arrives with its bright, sunny days we cannot be contented indoors.

Last year we did all the work in the garden except the plowing. We even stuck the pole beans, tied the tomato vines up to the stakes and later on we also enjoyed the fruits of our labor when we could go out in the cool morning and pick the tender, green beans and peas with the big, red tomato for our dinner. Besides we raised lettuce, beets, cucumbers and cabbage, growing enough of the latter two to make pickles and kraut. Our garden supports us through the summer season except our groceries and many of these are bought with our "green stuff."

We intend to grow our own vegetables as long as we are able to use the hoe and when we get too old to make our own garden we will hire someone to make it for us. We are not capable of offering advice, but we do think that it would be a good idea for those who have heretofore depended upon buying their vegetables to try raising a garden of their own the coming season and note results. Do not let another springtime pass without making an effort to cut down the expense of living. A small garden will do wonders in this direction and you will get a great deal more from your little garden than you thought possible to produce on a small amount of ground.

To grow a garden successfully the soil must be rich, the ground must be well plowed and worked into a good loose seed bed. Another item of importance is good seed. One should not delay in ordering seed until the rush were 1,000 pounds or more below in production. Another bull was brought kept for several years. A new bull of spring for the earlier a vegetable can be produced the greater its value.

$200

Takes possession of a fertile quarter section in

Southwest Kansas

There's not much vacant land left in Kansas. The five southwestern counties have remained unsettled and undeveloped because of inadequate transportation. The Santa Fe is building new lines to serve this territory, and thousands of farms next season will be put to creating wealth. This is your opportunity to get a good Kansas farm cheap. The terms are advantageous, the results certain.

If you had taken a Kansas farm ten years ago and developed it with intelligence and vigor, you, too, would now be lending money to Wall Street, as other Kansas farmers are doing. You, too, would have a piano in your parlor and an automobile in your barn.

The next best thing is not to lose this opportunity of securing a quarter section of this splendid wheat land.

Besides wheat, oats and barley, you can get good profits out of speltz, milo-maize and kaffir-corn fed to your own stock. Hogs thrive on milo and kaffir, and disease is unknown. Western Kansas farmers find peanuts a splendid hog feed, easily grown and easily fed. Broom corn brings fancy prices, and potatoes, garden truck, fruit and alfalfa will all do well for you.

There are some flowing artesian wells in this territory, and everywhere that wells have been put down water comes to within thirty to sixty feet of the surface. Irrigation by pumping will doubtless be commonly practiced, and the tremendously increased yields will pay big dividends on the small investment required for gasoline or oil driven pumps.

The climate is pleasant and healthful. Your boys and girls will find good schools. Churches, social clubs and farmers' institutes are being organized. Rural telephones and free delivery are coming in. In every way development is rapid, and only a few years will give you every advantage that older communities have.

You can secure a quarter section (160 acres) for only $200 down. The price is $10 to $15 an acre. The terms are astonishingly liberal. Only one-eighth down and one-eighth each year after the second year, with interest at only 6 per cent. You see you have two full seasons before a second payment on the principal is required.

For further information write for illustrated descriptive folder containing map and full details.

FLOWERS IN HOUSE AND GARDEN.

To the Editor of The Homestead:

Your sacred lilies, hyacinths, freesias, paper whites, and other bulbous flowers in the house are practically through blooming. Throw the sacred lilies away for they are useless, but let the others grow on in some out-of-the-way corner until the tops turn yellow, then set them aside in the pots until next August.

Feed your house plant rather more freely now as the days get longer and new growth starts actively. A strong growing plant will stand liberal feeding, but be careful with those of weaker growth, and never feed a sick plant, unless it shows evidence of being a starved plant, which is seldom the cause. Keep the weak plant a little dry, stir the soil freely, and give plenty of air, but not too much hot sun.

Let your amaryllis rest after it is through blooming by withholding water until it is pretty dry. Keep it just so the leaves do not turn yellow until new growth begins, then dig out the surface soil down to the fleshy roots and fill with a rich loam containing a third of rotten manure. Water freely now and give full sun. Buds develop in the period of rest and a plant that is kept growing seldom blooms well. Properly rested after each blooming period they will bloom twice a year.

If you want your tuberoses to bloom before frost better start them in the house early. They require a long season to mature.

The old-fashioned tiger lily is beautiful in the background, and the new double tiger excels the old single. Plant a few bulbs among your shrubbery.

Golden glow is another hardy plant that is fine in the background. Grows five or six feet high with large flowers, very double, that look like golden balls. The golden glow is the only rudbeckia that is worthy a place anywhere so far as I am acquainted with the family. The catalog descriptions of Purpurea may fool you, for it is nothing more than a coarse weed.

The Japanese lilies of the speciosum family are beautiful, are very easily grown, and thrive most anywhere. Speciosum album is pure white. Rubrum has white background with a rich red stripe down the center of each petal and red dots on the white. They increase rapidly and soon form fine clumps.

Don't plant the Auratum lily, even should the catalog description captivate you, for it is subject to disease, and not one in ten thrives. It is a grand lily when well grown, but not worth the risk of failure.

Plant your lily bulbs deep. When you think you have them deep, go deeper. Don't be afraid to bury them. Put a little sand around the bulbs and cover them a foot deep in ordinary mellow soil, and ten inches at the least in any soil fit to plant them in at all. L. H. Cobb.

THE SMALL GARDEN.

To the Editor of The Homestead:

If the soil is rich and the garden well tended, a small patch of ground will yield an abundant supply of vegetables. For a family of four to six a good plot of ground thirty by 120 feet will be sufficient to grow vegetables for home use.

I planted a plot of ground this size and give here my plan and success. The rows were marked off crosswise of the plot so that each one was thirty feet in length. Four rows one and a half feet apart were planted to potatoes. A double row of lettuce was sown two feet from the potatoes, and a foot from the lettuce a double row of radish was planted. Two double rows of beans one foot from radish and two double rows of peas two feet from beans came next. Then followed four rows of early cabbage and one double row of parsnips. After them were plan a double row of beets

Seed Corn

McGREER BROS., COBURG, IOWA.

beyond which were four rows of early sugar rn. The rest of the plot was put in matoes with the exception of a double row of onions at farther end.

After the potato vines had begun to show signs of maturity, I planted late sugar corn between the hills, and it was ready for use a short time after the early corn was gone. When appetities for radishes and lettuce were satisfied I planted late cabbage in their places. Beans and peas also were gone in time to plant late cabbage in their places.

This plot of ground yielded more than my family of four could consume. Lettuce, beans and onions were either sold or given to the neighbors. I dug three bushels of potatoes for winter use. Thirty head of late cabbage were buried in the late fall. The tomato plants gave us ripe tomatoes in season and my wife put up forty quarts besides. Se we were well pleased with what our small, but rich plot of ground yielded for us. Subscriber.

ABOUT MARKET GARDENING.

An Iowa subscriber writes:

I have a family of boys and the two older ones run the farm and the third wants to do something else. He has a great liking for the garden business and has his hotbeds about ready. We are eight miles from a manufacturing town and he expects to haul his crops to town and peddle them out. He will grow a lot of plants to sell, but don't know how many of each t) grow. About what does the market take? I tell him he ought to wait a year and work with some real gardener and learn about the business, but he thinks he can't wait so long.

If the boy has a real liking for the garden business he is likely to succeed in it, and you are doubtless wise to let him try it. As you say, some experience in the actual business, which might be gained by working for one season or more, rather than less, with a practical market gardener, would be extremely valuable. It would solve for him many practical problems which are sure to come up. But upon the point of the relative demand for plants and apportioning his output to suit the call we can give him some pointers which ought to help.

In the plant market early cabbage and tomatoes are the leaders, and these should lead all others in the hotbed by about four to one. This should be about the proportion whether you work upon a large scale or a small one. To satisfy the different tastes, plant about four varieties of each. And you will want to start at least two sorts of the later or general-crop tomatoes, and the same of late cabbage, only they may be planted in the open in May.

A manufacturing town like yours will take many other plants besides cabbage and tomatoes. He will need to grow peppers, cauliflower, celery, sweet potatoes and a supply of flower plants, such as pansies, nasturtiums and asters. That is, you must grow all of these if you would be able to supply all that your customers call for. And you will have calls for others that you do not have upon your list. Grow quite a lot of peppers and celery; let them rank next to cabbage, but less of the cauliflower. The amount of sweet potatoes to grow will depend upon your people, how much they are in the habit of using, and celery is much the same.

There is money in pansy growing, but it is a little difficult to start them requiring careful touch and attention. The egg plant should be started, for you will have some demand for it, and while the number who use it is limited, those who have the habit want it very much. Sage is another plant which sells very well, as many people want the herb, but do not know how to grow it. Among the flowers it will pay to start the salvia, which is very popular, and growing in popularity rather than declining.

You will always find some people who are willing to pay an extra price for a fancy article. So it is well to have some transplanted plants to offer with the common stock. Take some of the cabbage and tomato plants, just as they show the second pair of leaves, and set them out one inch by one inch in a bed which has been reserved for the purpose. Shade for a couple of days until they recover from the moving. These plants will become very stocky and will readily sell to those who are particular for five cents per dozen more than the common grade. The plant grower must always bear in mind that the profit is in the last dollar.

The five imported Percheron stallions winning the grand champion herd prize over all ages at Illinois State Fair, 1912. Imported by Taylor & Jones, Williamsville, Ill. See advertisement

Trees at Half Price

EARL FERRIS
IOWA'S EVERGREEN SPECIALIST

I will sell you, just as I have hundreds of others, my hardy northern grown trees direct from the nursery row at one-half the price you pay agents for poorer stock that has been out of the ground for days or weeks.

My catalog is my salesman. It costs me only one cent to send it to you. You get the saving. It clearly describes and prices my Evergreens and "True to Name" fruit trees—Delicious Apple, Earl Plum, Jones Strawberries and many others.

I stake my reputation on every tree shipped, and personally supervise the work of my employees to see that everything goes out right. That is why I can guarantee my trees to reach you in good growing condition and give satisfaction.

With every tree I sell goes two generations of nursery experience. My father started this nursery in 1869, and I have devoted my entire life to building it up.

100 TRANSPLANTED EVERGREENS $7.50 EXPRESS PAID

A good windbreak of my hardy Northern-grown Evergreens, costing only a few dollars at my bargain prices, will add $1,000 to the value of your farm.

My Evergreens will give satisfaction because my 25 years of experience has taught me how to handle Evergreens, and you get them direct from me before they have been out of the ground more than 18 to 36 hours, depending on where you are. They have been transplanted and root-pruned, assuring them an abundance of fibrous roots, nature's guarantee of life to young trees.

Some people think that Evergreens are hard to start. This is because they have bought of traveling agents whose trees were out of the ground two or three weeks. My trees are shipped direct from the nursery row in well-packed air-tight casings. They are backed by the fairest guarantee of any nursery in the United States and by my 25 years' reputation as Iowa's greatest Evergreen specialist.

Send for Catalog. Send for my catalog containing special bargains of Evergreens, "True-To-Name" fruit trees, shrubs and bulbs, all of which I guarantee to prove hardy or cost you nothing.

ALSO OUR NEW & ILLUSTRATED NURSERY BOOK FOR 1913

Barker's Futurity Sale.

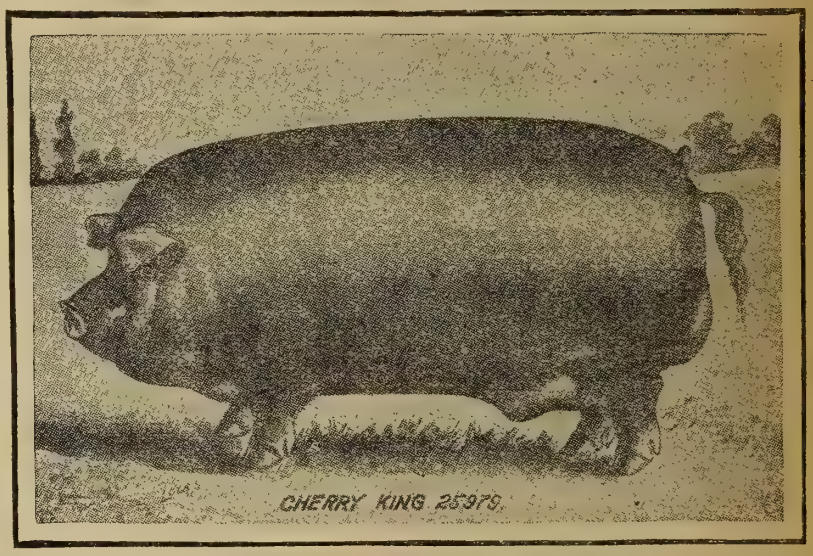
E. S. Barker, Doon, Iowa, holds his sale of bred Poland China sows in his comfortable sale pavilion on his farm on February 13, 1913. While Mr. Barker did not show in any but the pig classes at the state fair last fall and was not only successful in open competition, but carried away the coveted futurity prize instituted as a novelty in this sort of competition last year, he has older stock on his farm which is as worthy of reward from show-ring competition as his younger animals were. In this herd the sows are big, they are as useful a type as any herd can show, grow as big, fatten as easily and breed as well. Lyon Chief, the head of the herd, is a boar that his proprietor has used only for breeding purposes. He has never been fitted to show the size he might develop, but the pigs he has sired have not only shown up well in competition, but they have sired winners. Lyon Chief gets sows that grow large and smooth and have all the desirable points one would wish them to have. His gilts are the same and are quick growers from the very start. It isn't hard to fatten them at any age and yet we saw sows on Mr. Barker's place sired by Lyon Chief as big as any other sows from any other breeding he had there. Some of these sows will be sold sale day and especial attention ought to be called to Lyon Queen and Lyon Quality, two sows as good as anyone wants to put in a herd of the best. Both are good samples of the way Lyon Chief breeds and indicate what the gilts to go through the ring will develop into if they are given equal chances. The fall yearlings are by Great Expansion, a son of Dorr's Expansion, a big, smooth boar that was prevented from a good show record by an untimely death. It must be remembered that the futurity pigs sell and that they are great pigs themselves. They have all been bred to good boars. The first-prize gilt was bred to Expanso by Expander, the Sioux City first-prize aged boar, and out of Lady Wonder by Fesenmeyer's A Wonder. He was the first choice to be taken from Dorr & Sons' herd this fall. There is one more good feature of this sale, namely, the produce of Gentle Jessie, a great brood sow that has always made an enviable record in this herd. She is the dam of the futurity litter, is the dam of three fall gilts by Great Expansion; is the dam of Mondamin Master (sire of winners at Des Moines and Minnesota), and Jessie's Chief, Mr. Peery's good herd boar. Gilts from a brood sow with that record are the best kind to buy and here is a chance at just the right time. Address for catalog, mentioning The Homestead, E. S. Barker, Doon, Iowa. Ray L. Gribben will attend the sale for The Homestead and will give honorable attention to mail and wire bids.

Zimmerman's Poland China Sale.

On February 22d, at Neola, Iowa, W. E. Zimmerman will hold his annual Poland China brood sow sale and he will offer forty head of the best sows he ever drove through a sale ring since he has been in the business. He has a lot of tops that he is putting into this sale and they are sired by some of the most noted sires of the breed. In other words, he is selling daughters of such well-known boars as Orange Wonder, Chief Price 2d, Big Orange, Big Buddy, Big Wonder, A Wonder, Jumbo, Mastodon King and other noted big-type boars. He has selected out five of the very best sows he has in his herd and these are going into this sale. One of these is Merry Price, a daughter of Chief Price 2d, out of an Up To Date dam, and she is bred to Mastodon King for a March litter. Tecumseh Queen is a daughter of J.'s Chief, he by old Johnson Chief, out of an Expansion dam, and she is bred to Pawnee's Price, a son of the great Smooth Price. Orange Blossom is a daughter of Orange Wonder, a half-brother to the noted boar, Big Orange, and she is out of Blossom Monarch by old Gay Monarch and she is bred to Pawnee's Price. He is selling ten good fall sows by his old boar, Cloverdale Hadley, and these are out of dams by Big Victor, Pawnee Wonder and Big Tom. Among the choice gilts that he will sell are three by the noted Big Orange, out of a dam by Pawnee Lad and old Anna Price 2d. Two good gilts by Big Buddy, out of old Amy K., a half-sister to old Long King. Three are by Big Wonder, he by Ellerbroek's A Wonder, out of a dam by Big Orange. Two more are by A Wonder Jumbo, out of a daughter of M.'s Hadley and a Giantess dam. The remainder will be daughters of Mastodon King and Cloverdale Hadley. The most of these will be bred to his great young boar, Pawnee's Price, that is the making of one of the best young boars in western Iowa, and Mastodon King, a son of the noted King Mastodon. Write W. E. Zimmerman, Neola, Iowa, for catalog and kindly mention this paper. Bids sent to M. T. White, representing this paper at the sale, will receive attention.

Ringmaster Short-horn Sale—Last Call.

The fifty head of Scotch-bred Short-horns that White & Smith will offer at public sale at Chicago, Ill., Wednesday of next week, February 12th, form one of the best lots that will go into a sale ring this year, and we doubt if any sale will offer as many outstanding show propositons among the females as will be seen in this list. The gentlemen making the sale have dipped heavily into the tops of their herd in order to give the buying public an even divide, and hard to suit indeed will be the Short-horn admirer who cannot find in this offering something that will add strength to his herd. The fact that sons and daughters of the undefeated grand champion, Ringmaster, are numerous in this sale is of itself sufficient to mark the event as one of extraordinary importance, for opportunities to secure the get of so prepotent a sire and so remarkable a show bull are rare indeed. In addition to the get of this undefeated grand champion there are some twenty head of females in the sale that are either bred to him or have calves at side by him, and among them is the sensational grand champion of the 1912 International, Roan Queen, one of the greatest females that ever stepped into a show ring. She will calve soon after sale day to the service of Ringmaster and the outcome of this mating should be something sensational. Not only is there an abundance of show-yard material in this sale, but some of the strongest breeding propositions that have been offered to the public in years



Cherry King, one of the most noted sires of show and breeding hogs in America today. Some twenty-five sows are bred to him that will be sold February 18, 1913, in the Chas. F. Sprague sale

are listed. There is not a bad one in the lot, either as regards breeding or individuality. The catalog shows a lot of pedigrees as good as the herd book affords, while the cattle all give evidence of the skill of that master breeder and fitter, Leslie Smith, than whom there is none more capable. This sale should have a large attendance and a liberal patronage. The showman will find here just what he needs to carry him on to victory in the shows of the coming year, the breeder will have the opportunity of adding animals that will strengthen his herd in every way, while the beginner looking for the right kind of foundation material can rest assured that what he needs is listed for this sale. The enterprise of White & Smith in offering to the public so choice a lot of cattle should be appreciated sale day by the buying public. The offering is in every way worthy. The final announcement appears on page 51. If you have not already secured a catalog write for one at once to White & Smith, St. Cloud, Minn., mentioning The Homestead, and arrange to attend the sale at Chicago next Wednesday, February 12th. You will not be disappointed.

Last Call Mousel Bros.' Combination Hereford Sale.

We are this week calling attention for the last time to a sale of Hereford cattle that the writer thinks is of especial interest to the Hereford breeders in particular and the beef cattle business in general of the western states. It is the sale that will be made under the management of Mousel Bros., Cambridge, Neb., the same to be held in Bradstreet & Clemens' sale barn in Grand Island, Neb., on February 15th. On another page of this paper we show a group of young bulls that will go in this sale, and while a photograph rarely does justice to live stock, yet one may gain some idea of the excellence of the young bulls that will be sold by taking a good look at this photograph. The calves shown are all the get of the great breeding bull, Beau Mischief, and we believe that there are a couple in this group that are fully equal to the ones sold in the Mousel

75 Bushels of Corn On Every Acre

Many other farmers are getting it. So can you. The secret is good seed corn. The sure, safe and right way to know you are planting live seed corn that will produce a big yield is to test with

Holden's Ideal Tester

The perfect tester. The only water tester. Agriculture college experiments show that seed tested by the water method produces best results and bigger yields.

Great New Everbearing Macatawa Blackberry

This year you should grow berries. It's the thing that pays in commercial fields and in gardens. And to make your work count for the most, grow the heaviest yielders, the biggest, meatiest, best-flavored berries.

Macatawa Blackberry has all these qualities, and more. It's a brand-new sort, a cross of Eldorado Blackberry and true Giant Himalaya Berry. The berries are extraordinarily large—3½ inches around one way, by 3½ inches the other. They begin to ripen July 1; the big pickings come just after July 1, and you get ripe berries until frost.

Berries are sweet even when green, free from core and seeds, meaty and altogether delicious, wonderfully good to look at, and just as good to handle, to ship and to eat—high-priced and profitable.

Plants Begin Bearing the First Year

and yield immense crops afterwards. They are absolutely hardy in 40 degrees below zero. Macatawa plants $1 each, or 6 for $5. Only 6 to one person.

Send today for the 1913 Berrydale Berry Book. Full of valuable Berry information. Contains true descriptions of the Macatawa Blackberry, of Himalaya Berry and many other profitable berries you ought to grow in your garden or fields. Let me have a card for the book today.

SHULTZ'S Red Top GRASS SEEDS GRASS IS THE BEST COWPEAS MILLETS CANE TIMOTHY---BLUE GRASS ALFALFA, RED CLOVER, ALSIKE AND SWEET CLOVER

OLNEY, ILL. Send for samples and price

Bro[illegible]nd Clements sale at Grand Is[illegible] about a year ago. The writer remembers that that is quite a statement to make, as there were some calves sold in the sale a year ago that were the equal of anything that had been sold in the West, but we have seen the calves shown in the photograph we just mentioned and we really believe that there will be presented bulls that are the equal of the ones sold at that time. This statement merely means that those of our readers looking for a bull to take out to show another season, or that will be suitable to head the very best kind of a herd, that this place is the place of all places to find him. The bulls shown in the photograph are only a small part of the choice bulls that will be offered in this sale, for there will be seventy head of bulls in this offering and the breeders assure us that they are the equal of any sent forth from their respective herds, and bulls that they are glad to offer to critical buyers. Better attend.

La Doux's Last Call.

We give this week the last call for the sale of Chester White brood sows that will be sold by F. W. La Doux, Spirit Lake, Iowa, on Thursday, February 13th. The sale will be held in town in the livery barn of John Deibner, so that there will be no trouble in attending the sale, even if the day should be of the very worst sort. This is the first sale that Mr. La Doux has ever held, but it is seldom that a man who is selling for the first time has been able to offer a choicer lot of pigs. In order that those who will be at the sale will have a chance to see the sort of breeding stock that is kept on the farm through the year, Mr. La Doux will have the boars and some of the sows at the barn sale day for inspection by visiting breeders. The animals that are entered in the sale are about as good as one ever sees driven into a sale ring and we feel certain that men who attend the sale will find plenty to suit their purposes. There will be about forty head in the sale and they are all by good sires and will be in very good condition by the date of the sale. The old boar, Joe Cannon, is not in this sale any longer, but is doing good service in another prominent herd in the northern part of the state. He got sows and boars of good size and these sows, when mated with the younger boar, Gold Coin, have shown a good size and are especially well equipped with big, stout bone and stretch. This is more noticeable in the fall pigs than in any other bunch of this breed that we have ever seen. You will say the same thing when you see them at any time that you have a chance to visit the herd this winter or next summer, when you can see them on the farm. A few of the sows that will be run through the sale will be entered by C. H. Springer, of the same place, and they are all of about the same general sort as the ones that are sold directly from the farm of the man who is advertising the sale. They are the same breeding, as the boars were obtained from Mr. La Doux, and the sows are exactly the same in blood. In the catalog the sows are numbered as they are in most catalogs of sales, but you will find that the method of numbering the sows will not make any difference in the sort of sows that will be driven in the ring for the sale. In this year, when the demand for good brood sows of any sort is already so good as shown by the sales of this kind of breeding stock that have been held so far this season, the sale that Mr. La Doux will hold will be one of the best chances to buy good ones for little money that will be likely to be held this year. A first sale is always a place for the best bargains that the sale ring holds for breeders and this will be more than usually so because the class of sows that are cataloged is away above the average for the breed. The sows are all big and have stretch, are good in bone and are from good brood sows. There is one sow on this place that has already shown the great returns that can be obtained from a pure-bred sow. She has farrowed, in the four litters that she has brought to this farm, thirty-nine pigs, and of these thirty-nine she has saved thirty-six of them. Some of them will be in the sale and they are surely the kind of breeders that any man can afford to use on his farm, even if he does not care a snap for a pedigree. They are surely worth a visit to Spirit Lake on the day of the sale. Write to Mr. La Doux, addressing him at Spirit Lake, Iowa, and please tell him that you saw his advertisement in The Homestead. G. M. Thompson, a Chester White breeder of Inwood, Iowa, will attend the sale as field man for this paper and you may be sure of fair treatment if you send him your bid.

Jones' Great Offering of Big Sows.

At Dunlap, Iowa, on Monday, February 10th, A. D. Jones will sell seventy head of great big, lusty Poland China brood sows and he certainly has an offering that all the breeders will want this year. The sows he is selling in this sale are all of strictly Mouw and Miller breeding on both sire and dam's side, so you will therefore see that no one will sell a better bred lot. Another thing about his offering, they are all bred in nice time and all are showing in pig. Many of the sows Mr. Jones is selling carry four crosses of old Chief Price, Miller's Dry Creek Chief and Choice by Chief Leader. The boars that Mr. Jones is using in his herd are Miller's Tecumseh, a boar bred by John Miller and formerly owned by him and Dr. Pritchard, and we saw him when he weighed 1,000 pounds. This hog has been a great breeding boar and some of the best sows in the sale will be sired by him. J.'s Dry Creek Wonder is another great boar now being used in this herd and he is one of the best hogs today in the West. The other boars are Mohawk Chief, Long Choice, Orange Price and Young Miller's Tecumseh. There are sixteen daughters and granddaughters of the great sow, Minnie Fair, in his sale; six splendid spring yearlings; forty-five summer and fall yearlings, and the balance spring gilts. When it comes to strictly large-type breeding no one can show anything better than this old veteran can in his forthcoming sale. Write for his catalog and mention The Homestead. Bids sent to M. T. White or C. C. Carlin, in care of Mr. Jones, will be attended to on day of sale.

23-Cent Value for 6 Cents

A 33-Piece Easter Assortment

Easter Greetings

The sending of small Easter remembrances is a pretty custom that grows every year. The cards, book marks, folders and decorative novelties here offered, while inexpensive, are attractive and express the Easter sentiments as no words can.

4 Easter Post Cards -	Value 4 Cents
2 Fancy Crosses - -	Value 5 Cents
1 Easter Book Mark -	Value 2 Cents
2 Angel Heads - - -	Value 2 Cents
2 Chicken Heads - -	Value 1 Cent
2 Four-Page Folders -	Value 4 Cents
20 Easter Seals (Assorted)	Value 5 Cents
33 Pieces - -	Regular Value 23 Cents

As to Quality

Regardless of higher prices, you cannot get more exclusive designs, attractive coloring, appropriate text matter, a more varied assortment, or better material and workmanship than is displayed in this outfit, which is well worth the regular price of 23 cents.

To show you the exceptional value, and to introduce Our Big Easter Offer,

We Give You this 33-Piece Easter Outfit for only Three 2-cent Stamps

if you will agree to show your package to four of your friends and try to interest them in *Our Big Easter Bargain Offer*.

Our supply of these introductory packages is limited, so send your order today. Don't delay, tomorrow may be too late. Address your order to

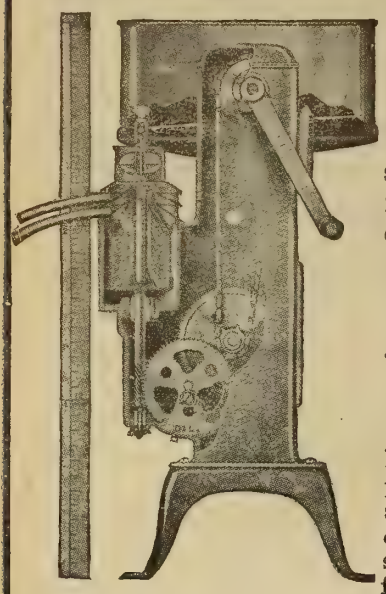
Money Talks in the Mail Order Business



IT gets the low prices. But there is no reason why the farmer should not also enjoy cash with order prices in buying a high grade separator from his dealer. This is exactly our proposition. We enable the dealer to sell our

"STANDARD" Cream Separators

At Mail Order Prices

500-550 lb. Capacity, $47.50
700-750 lb. Capacity, $56.50
900-950 lb. Capacity, $63.50

How can we do it? Simply by practicing mail order economies in selling our goods—*cash with order and no salesmen's expense.* We save the mail order profit by manufacturing ourselves; we save sales expense by employing no salesmen; we save losses and long credits by getting our money with order. The dealer in turn gets spot cash and can afford to sell for less profit. The result is a price for the "STANDARD" which is less than mail order figures for *anything like as high grade a machine* of similar capacity.

Sold ONLY Through Your Dealer

We use mail order economies, but we do not do a mail order business. Our product is strictly high grade—handled exclusively through reputable dealers. In buying a "STANDARD" you get dealer service and dealer backing—a chance to see the machine before you buy it and to return it within a reasonable time if it does not please you entirely. Your money will be promptly refunded. Every dairyman who desires the advantages of buying a *standard* make of separator from his dealer at *mail order prices* should look into this proposition. Write for our catalogue on the "STANDARD", and get full particulars. You won't have to buy unless you want to.

NOTE: For herds of more than ten cows we recommend using the self-powered "AUTOMATIC." It requires no cranking; is driven by a self-contained gasoline engine of remarkable efficiency. Bowl spins at high, even speed, without a trace of vibration. A great labor saver. Used by thousands of up-to-date dairymen in this country. Write for our "AUTOMATIC" catalogue and testimonial letters. They will surprise you. If you are milking but half a dozen cows, buy the hand-driven "STANDARD" at mail order price now, then trade it in later for an "AUTOMATIC" when your herd becomes larger. We will make you a liberal allowance through your dealer.

STANDARD SEPARATOR COMPANY
335 REED STREET MILWAUKEE, WISCONSIN

$2 The Price You Get for About 8-lbs. of Butter Puts This Big Fine SEPARATOR in Your HOME

Then the machine itself will earn the other easy payments before they are due. You have the machine to use twice a day on your farm. You get **one-fourth to one-third** more cream—have fresh, warm skim milk for the calves, pigs and chickens—make work easier for the women folks and before you realize it this big money maker is all paid for out of your extra cream profits. You don't feel the cost at all, especially at our low factory-to-farm prices of only $24 and up.

NEW BUTTERFLY

$24 and Up

New Butterfly Cream Separators are sold direct from the factory to you. No agents' commission—no dealers' profits to pay. No interest—no extras. You save half. For example—$24—(payable only $2 down and $2 a month for 11 months) buys the New Butterfly Junior No. 2—light running, easy cleaning, close skimming, durable. GUARANTEED A LIFETIME. Skims 95 quarts of milk per hour. Made also in four larger sizes up to No. 5 1-2, shown here. Free colored folder tells which size you need.

30 DAYS' FREE TRIAL — LIFETIME GUARANTEE

We ship any machine we make on 30 days' FREE TRIAL—allow you to use it on your own farm—test it in every way. If you are not fully satisfied, send it back at our expense and we will refund all you have paid, together with *freight charges both ways*, so you will not be out one penny. You can't afford to miss this opportunity to get a cream separator. You take no risk. Write for FREE CATALOG FOLDER and Factory Price List TODAY.

HOME CREAMERY MANUFACTURING CO., Dept. 110 Owatonna, Minn.

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

PRECAUTIONS NEEDED TO KEEP MILK CLEAN.

In order to produce pure, clean milk, every precaution must be taken to keep it as free as possible from bacteria and dirt or foreign matter of any description. The production of clean milk rests with the farmer, but the dairyman is responsible for keeping the milk in a clean state until it is finally delivered to his customers. It is impossible for the farmer to produce sterile market milk, as many forms of germ life enter it from the air and multiply rapidly in milk, especially when the commodity is warm. The habitat of bacteria is largely dirt, and therefore, by keeping the milk clean the number of germs in it will be very low as compared with dirty, infested milk.

The way to produce pure, clean milk is to observe scrupulously cleanliness in everything with which the milk comes in contact. The barns should be whitewashed at least twice a year, and must be well ventilated, as it is essential to have a pure atmosphere as well as clean walls and floors. The floors should be thoroughly cleaned twice a day, but not just previous to milking, as this would fill the air with dust and dirt. It is necessary to keep the cattle clean, as the animals' coats afford a harbor for dirt, dust and all kinds of germ life. It will not be found practicable to thoroughly groom the cows daily, but the flanks and udders should be kept clean, as it is from the hind quarters of the animal that the dirt, etc., falls into the milk pail.

As the air of the byre swarms with various species of microbes, it will be observed that an important point in the production of clean milk is its removal from the barn immediately on being drawn from the cow. The milk must be taken direct to the dairy, where it is then filtered.

It is imperative that milk be filtered as soon as possible after leaving the cow for several reasons, the chief of which are that milk when warm is less viscous than when cold, and thus more easily passes through a very fine filtering medium. Even when milk is obtained with the greatest care as regards cleanliness, it always contains a certain amount of foreign matter, most of which readily dissolves in warm milk, and the object is to remove this dirt, etc., before all of it can be dissolved. All dirt and particles of manure entering milk carry vast numbers of the injurious species of bacteria, and, therefore, the sooner the dirt is removed the better it is for the milk. The old-fashioned way of straining milk through a muslin cloth should not be practiced, as by this method it is impossible to remove anything like all the foreign matter from milk, and many troubles such as ropy milk, etc., have been traced to the use of unclean straining muslins. The most effective, and at the same time practical type of milk strainer, is that in which a cotton wool disk is used at the filtering medium. This disk is placed between two meal gauze disks of very fine mesh. This type of strainer is known as a milk filter, and is so constructed that a sheet of metal bears the weight of milk when the filter is full. In this way it is impossible for the pressure of milk to force the dirt, etc., through with the strained milk.

Immediately all the milk has passed through the filter it should be taken to pieces, the filtering medium burned, and all the metal parts washed in tepid—not hot—water, and then steamed or scalded. Washing with hot water causes albuminous portions of the milk to adhere to any crevice, etc., in the metal, and especially in the gauze disks. This albuminous substance affords a food for various species of bacteria which often cause trouble with the milk which subsequently passes through the filter. For whatever purpose milk is required it is imperative to abstract, by means of filteration, as much as possible of the foreign matter from it, as it is impos-

$2842.00 Profit In 70 Days on Ensilage Fed from Champion Silos

This remarkable record made by C. L. Hurd, Wainwright, Okla., shows the possibilities of ensilage feeding. It proves that the Champion Silo is best in material, construction, improvements and a real profit maker worth investigating.

sible to manufacture good dairy products from contaminated milk. Where milk selling is carried on the efficient cooling of milk immediately after filtering is most essential.

Most of the changes which occur in milk, especially the common souring, are brought about either directly or indirectly by bacteria. Milk contains all the constituents necessary to the sustenance of germ life, and most species of germs increase most rapidly and perform their functions best at about the temperature of the animal body. Very high temperatures kill bacteria, and low temperatures (50 degrees and lower) numb them and check their development. Heating milk to a high temperature impairs the digestibility of its constituents. Therefore, in the production of pure milk the aim must be to keep the bacterial contents as low as possible by cooling the milk to a low temperature directly after it leaves the cow. The cooling numbs and renders inactive the germs that are inevitably present in the milk. It may be as well to point out that milk obtained in a cleanly manner contains chiefly germs of the beneficial type. There are two types of milk coolers on the market—oblong and cylinder. The construction and working of these coolers are so well known that a description of them is considered unnecessary. A good cooler should be capable of cooling the milk down to a temperature only one or two degrees above the temperature of the water employed for cooling. On the average three or four gallons of water will be required to cool one gallon of milk. Having cooled the milk down to about 50 degrees F., or lower, it should be kept at this temperature until delivered to the customer.

W. H. O.

CARING FOR THE DRY COW.

To the Editor of The Homestead:

There is a prevalent idea that when a cow is dry she needs no care and very little feed. This is a serious mistake. When a cow is dry she needs just as much care and almost as much feed as at any other time. Why do we allow cows to go dry? It is simply to give them a chance to rest and build up their bodies which have been run down by the strain of the past ten or eleven months' work in the production of milk. Perhaps some may not agree with that statement. They will say, "Why, I would not let my cows go dry if I could prevent their doing so; they just go dry in spite of me." It is the nature of a cow to go dry and she will usually do it of her own accord. But why is it her nature?

It is the cow's nature to go dry just the same as it is the nature of a Jersey to conform with the Jersey breed type and just the same as it is the nature of a Holstein to be black and white. It is a charactertistic which has been bred into her ever since the beginning of the development of the dairy cow. This does not mean that the men who founded and improved the breeds selected for cows which would go dry for a certain period, but they did select for cows that would give a large volume of milk per year and do it for several years. In order to insure this quality it was necessary for the cow to remain dry for a certain period that she might repair and rebuild her system for the coming period of milk giving. It has been the experience of every manufacturing concern that their machinery needed to be overhauled and repaired occasionally in order to maintain its efficiency and insure long service, and it has been the experience of dairymen that this period of rest and repair for the dairy cow is necessary and very profitable.

Unless the cow is properly cared for and fed according to her requirements when dry she cannot get her system in shape to properly nurse her offspring and give a large yield of milk during her period of milk production. If she is forced to spend her dry time in a barren stalk field or standing in a cold shed eating corn fodder, she can do no more than live and when she freshens her system will be in no better condition than it was before she went dry. But if the cow is kept in a warm barn during inclement weather and fed well she will store up some flesh and energy in addition to repairing her worn machinery, and will be ready to start the period of milk giving with some reserve energy and vitality.

The ration for the dry cow should be formulated with three things in mind; namely, to furnish a sufficient amount of protein to properly develop the foetus and allow a surplus for the needs of the body of the cow, to supply enough carbohydrates that the cow may lay on a little fat, and to supply succulence.

Some kind of succulent food is very essential in the cow's ration at all times. It serves to keep the bowels in a loose condition, which is necessary to good digestion and assimilation. Corn silage is undoubtedly the best feed to supply succulence, although it can be supplied by roots or dried beet pulp. The varying prices and availability of feed stuffs makes it impossible, or at least, not easy, to say how the protein and carbohydrates can best be supplied to fit the case on every farm. Alfalfa hay, clover hay, oats and pea hay, cottonseed meal, oil meal and oats are most common among the protein feeds,

15.95, AND UPWARD

AMERICAN SEPARATOR

THIS OFFER IS NO CATCH. It is a solid proposition to send, on trial, fully guaranteed, a new, well made, easy running separator for $15.95. Skims hot or cold milk; making heavy or light cream. DE LAVAL Cream Separators ARE EASIEST TO WASH

The construction of the De Laval bowl is such that it can be completely taken apart for washing.

The discs, bowl parts and tinware have no tubes, crevices, holes or corrugated surfaces such as are found in other machines and which are very hard to clean.

The De Laval discs are washed as a single piece and the whole machine can be thoroughly

CLEANED IN FIVE MINUTES

There is no part of the De Laval bowl which cannot be easily reached and seen, so that the operator can always tell whether or not every part has been properly cleaned.

The ease with which the De Laval can be thoroughly washed and kept in a sanitary condition is one reason why creamerymen prefer De Laval to other separator cream, and is likewise one of the reasons why butter made from De Laval cream has scored highest at the National Dairy Show for over 20 years.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

THE DE LAVAL SEPARATOR CO.

NEW YORK CHICAGO SAN FRANCISCO SEATTLE

Here You Are!

And you can't find its equal for quality, price and terms anywhere else on earth and I am going to prove it to you. I have already proved it to thousands of others.

My Bath-in-Oil Separator is a marvel for close skimming. Skims right down to the last drop, quicker, better and cheaper than can be done in any other way, and I will put it right in your barn or kitchen for a **free 60 days' trial** in competition with any or all other makes and let you be the judge—let the separator itself do its own proving. Can you beat that for proof? Words cease to mean anything—talk is cheap—often misleading—but can the separator itself tell you anything but just exactly what **it can do?**

90 DAYS FREE TRIAL

If it fails to please you in any way, just send it back. I pay the express charges both ways. If it's what you want, keep it and pay me on easy credit terms or cash—just suit yourself.

Remember my $25,000 Spot Cash Bond that guarantees every Galloway Separator.

$5,000 Challenge

The sensational defy that Galloway casts in the teeth of every separator competitor—a REAL challenge backed by REAL money that takes the wind out of every hostile sail. Write me for this $5,000 challenge. It's mighty good reading.

Saves You Half

Best By Test

A penny postal brings my splendid big Separator Book in four colors and amazing Special 1913 Offer that knocks the spots out of anything you ever knew.

Save $21.25 to $45

Of course the Dealer in your town may be a nice fellow, and it may be pleasant to have him greet you with a cheery "howdy-do," when you go in his store. But how much are you willing to pay him in cold hard cash for his conversation? Is it worth $21.25 to $45 to you? Now you know full well that if I sold my Bath-in-Oil Separator through Dealers, you would have to pay much more for it, because you know the Dealer is not in business for his health. He must have his fat profit, besides paying rent, clerk hire, and all store expenses. Yet he wouldn't add one penny to the value of my Separator—not a penny. Mail postal today!

Wm. Galloway, Pres. Wm. Galloway Co., K 103 Galloway Sta., Waterloo, Iowa. We carry stocks of Separators in Chicago, Kansas City, Council Bluffs, Minneapolis, Winnipeg.

HOLSTEIN-FRIESIAN CATTLE.

Pure-bred Registered

HOLSTEIN CATTLE

Professor Frazier, of the Illinois experiment station tested 554 Illinois cows—cows about as good as they will average in other states. In that investigation he found 25 cows that returned precisely the same profit as 1,021 poor cows.

Are you milking any of these unprofitable cows? Test yours and find out. There's still money in dairying but only for the man who does it in a businesslike way.

Old fashioned ways cannot compete with modern methods and modern cows. Pure-bred Holsteins are the choice of progressive dairymen all over the world.

AYRSHIRE Cattle for sale. Bred for good dairy results. Breeders and Shippers. Prices reasonable. F. TSCHUDY & SONS, Monroe, Wis.

while the carbohydrates portion of the ration is usually furnished by the corn plant or other similar feeds. Needless to say, the cow should be given water in plentiful supply, a good plan being to warm it slightly on cold days. If salt is sprinkled over the fodder portion of her ration, or otherwise supplied at intervals of two or three times a week, it will assist in keeping her system in good tone.

Subscriber.

BUSINESS ASPECTS OF DAIRYING.

To the Editor of The Homestead:

A dairyman of long experience and widely known for business sagacity recently stated to a visitor at his farm: "I have established a dead line in my herd. Every mature cow must yield full 6,000 pounds of milk to pay for her feed, for the labor expended in caring for her, for her shelter and for the many other items of expense. Heifers in their first lactation period I let off with a production of 4,500 pounds. Above the figures stated I make a profit, but positively cannot make anything unless the yield is above 6,000 pounds."

The man quickly impressed one as a dairyman who was running his establishment on a businesslike basis and his methods were looked into somewhat carefully. In the milking barn were the tally sheets and spring balance. Every cow's milk was weighed at each milking and the weight recorded. At regular intervals samples were taken and tested for butter fat. In the barn the owner pointed out the different cows with such remarks as: "Has averaged better than 8,000 pounds for three years. A nice looking cow, but we can scarcely get 7,000 pounds from her." At the farther end of the barn were two cows whose records the owner discussed in detail. The two were half sisters, sired by the same bull, but out of different cows. They were much the same in color, but differing in type. The first one was distinctly on the dual-purpose order. She was rather large with a good barrel and udder. Her back was such that it would have made tempting steaks for anyone. "She is what I call a good cow. Her record is 8,500 pounds for four years," said the owner. The other cow was small and rather scrawny—no steaks on her back. The owner smiled and continued his remarks, "And this is what I call a better cow. Her record is 9,500 pounds for the four years. If I were to sell the one of dual-purpose type for $60 for beef and this other should lie down and die the little cow would still have made me the most profit. That as I see it is very nearly true of the dual-purpose cow compared with the strictly dairy breeds."

The owner was lead to tell of some of his poor cows. When he first began to keep records and make tests he learned that many of the cows that he had considered to be his best cows were in reality the poorest. One he described in particular had deceived him by giving a large amount of milk at the beginning of her lactation period. Her record for a year showed that her total production was below the necessary 6,000 pounds. To quote the owner again: "She was sending me straight to the poorhouse and I thought she was one of my best cows." Then her test was only 2.6 per cent and the law in that state required 3.2 per cent. "Just as surely," continued the owner, "she had me headed toward the county jail. I got rid of her just in time to escape both."

While keeping tally may be one of the greatest feature when it comes to putting business methods into the dairy there are many others. Good dairymen usually are successful when thrown into other lines. It is because they are so accustomed to handling their affairs in a businesslike way. There is need for the display of business sense in the purchase and handling of the bull. It is the desire of every thoughtful dairyman to increase the production of his herd. The high producer eats but little more than the inferior one. Through the use of a bull of the right kind used on his best cows may he expect the average of his herd to improve.

FREE to You

Free the Beautiful "NATIONAL" Money-Saving Style Book

The "NATIONAL" Style Book is a very part of Spring itself—it is a part of the pleasure of Spring, it is Spring's Own Book of Fashions. To forget to ask for it is to miss part of the pleasure of the Spring Season—and it is to miss a very real saving in dollars. Study the list of Money-Saving Offerings below and then fill in and return to us the coupon for your FREE copy of the "NATIONAL" Money-Saving Style Book.

Waists	$ .59 to $5.98	Lingerie and Wash Dresses for Misses and Small Women	$1.98 to $7.98
Skirts	.98 to 7.98	Silk Dresses for Misses and Small Women	4.98 to 9.98
Lingerie and Wash Dresses	2.49 to 12.98	Coats for Misses and Small Women	1.98 to 9.98

Ready-Made Suits	3.98 to 17.98	Children's Dresses	.95 to 4.98

Also a full line of Underwear, Hosiery, Scarfs, Veils, Gloves, Leather Goods, Jewelry and a complete line of Boys', Misses', and Children's Wearing Apparel.

Your "Money's Worth" and How You Should Judge Values

Price does not tell value. And neither does a picture.

"A linen waist for a dollar"—means nothing. It may, we suppose, be worth either 75 cents or $1.25, depending on *where you buy it.*

A "NATIONAL" Linen Waist for a dollar means something. Because we honestly believe we sell as many waists as any two houses in America together. And so we *can* put more value, more real quality, and better material into every "NATIONAL" waist.

Just so a "NATIONAL" Dress is a better dress. It is better made—it is better fitting. Why, a "NATIONAL" Dress is actually draped on a model to insure its perfection.

Not one garment leaves our hands without a strict examination by an expert. Our own chemist examines every material to prove its service value. We do not believe any other house in the world does this. And it is so with every detail.

And so we ask you why not buy your clothes at the "NATIONAL"? Why not get the most you can for your money? Why not take the first step now by writing for your free copy of the "NATIONAL" Style Book?

—The "NATIONAL" Policy—

We prepay postage and expressage on all our goods to any part of the United States. Every "NATIONAL" garment has the "NATIONAL" Guarantee Tag attached. This tag says that you may return any garment not satisfactory to you and we will refund your money and pay express charges both ways.

AUTOMOBILE IN COLD WEATHER.

To the Editor of The Homestead:

At this time of the year a motor car in the hands of a novice gives considerable trouble; the engine is hard to start, the tires grind out quickly and the steering mechanism is stiff and its failure to work sometimes results in serious mishap.

Where we have much snow and sleet and the ground is frozen, the expense of cutting out the tires causes automobiling to be looked upon as a very expensive luxury, which is the truth indeed, but by the use of leather tire protectors this may all be overcome at small expense. The leather tire protectors cost but a very reasonable sum compared with the cost of a new set of rubber casing and with their use in connection with chains on the rear wheels you can pass over all kinds of frozen and rough roads covered with snow and ice and after the run is over the tires will be in as good condition as at the start.

Some people try to advance the idea that leather tire protectors heat the rubber casings and ruin them, but after years of experience I find this to be a mistake under all average conditions. The tires will stand up and deliver excellent service without injury to the casing and the savings they bring about will be worthy of consideration to the owner of any automobile using pneumatic tires.

When the engine is very cold and gives considerable trouble in starting always feed plenty of gasoline and prime the cylinders where priming cocks are provided. If the cylinders are not furnished with priming cocks you may remove a spark plug and prime through the opening made by removing the spark plug in severe cases, but this should not be followed as it will wear the threads in the cylinder and in time result in the loss of compression which in this case is very difficult to stop. Priming the carburetor may be heated with warm water, but strictly inadvisable to use an open flame as it often results in grave destruction which is bitterly regretted after an explosion has followed.

A failure of the steering mechanism will cause a serious wreck more quickly than the break down of any other part of the car and we should always have absolute knowledge of its perfect condition.

The mud sometimes flies on the joints and freezes to them, then we try to turn the wheel in guiding the car and with the great leverage in the wheel some of the frozen joints are broken which immediately results in a wreck. To avoid this all joints should be covered with leather protectors and packed with grease before applying them. The leather protectors which are furnished do not accomplish this any too well, but they are much better than nothing and will generally prevent an accident caused by the freezing of the joints.

Under no circumstances should we drive a car in freezing and thawing weather without some protection of the steering joints.

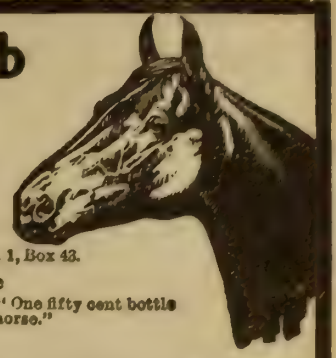
We should not run the car at excessive speed over rough, frozen roads as the constant jar causes severe strain on every part of the car and frozen iron will crack easily when suddenly twisted.

W. H. Ruther.

There is no work that pays better on the farm than manure hauling. Both tenant and landlord should recognize this, and both should work together to thus keep up the fertility of the soil. It would, in a great many cases, pay the landlord to buy a spreader for the tenant's use—providing, always, the tenant is the kind of a man who will make good use of it.

There are many points in favor of a cement floor in the cow barn, but there is no getting around the fact that it is cold and hard. This may be partly overcome by using lots of bedding, but it is not an easy matter to make bedding stay in the stalls. Will someone tell us something that is better than cement for floors in dairy and horse barns?

For Spavin, Curb Splint, Sweeny



"I have used your Liniment on a horse for sweeny and effected a thorough cure. I also removed a spavin on a mule. This spavin was as large as a guinea egg. I regard Sloan's Liniment as the most penetrating and effective Liniment I have ever known."—Mr. G. T. ROBERTS, Resaca, Ga., R.F.D., No. 1, Box 43.

Healed a Bad Collar Bruise

Mr. W. L. HAMILTON of Sterling, Kans., writes:—"One fifty cent bottle of Sloan's Liniment cured a bad collar bruise on my horse."

Good for Thrush

Mr. R. W. PARISH of Bristol, Ind., R. No. 2, writes:—"I cured one of my horses of thrush with Sloan's Liniment. Her feet were rotten; the frogs came out; she laid down most of the time. I thought she would die, but I used the Liniment as directed and she never lays down in the day time now."

A Great Remedy for Sweeny

Mr. SETH STONE of Harlsburg, Ark., writes:—"I have used lots of your Liniment. Have cured sweeny three times with it, and it is a fine Liniment."

SLOAN'S LINIMENT

kills spavin, curb, or splint, is a reliable remedy for sprains, thrush, wind puffs, shoe boils and all enlargements.

At all dealers. Price, 25c., 50c., and $1.00.

Contagious Abortion

Worse Than Tuberculosis in Cows

Fully a fourth of all the cows of the country are affected by it. There is loss of calf, loss of milk, damage to the cow, damage to the entire herd. Disease is highly contagious and spreads rapidly when started. Losses run into hundreds of millions every year.

Dr. David Roberts' Anti-Abortion Treatment Stamps Out the Disease

because it meets the germ at every turn.
ANTI-ABORTION medicine overcomes the germ in the mother's blood.
ANTISEPTO overcomes the germ in the genital organs.
DISINFECTALL overcomes the germs in the stables.
No one medicine can possibly overcome the disease.
Dr. Roberts' treatment, applied by yourself, makes it impossible for abortion to exist in your herd.

"Experiment is more costly than neglect" —Dr. Roberts.

The Practical Home Veterinarian, Dr. Roberts' great book, gives particulars on all animal diseases. 184 pages. Practical, plain, authoritative. Best book published for posting up on your animals. Distributed free at drug stores. If not at yours, send 25 cents and receive a copy direct, postpaid.

Dr. DAVID ROBERTS VETERINARY CO. 914 Broadway, Waukesha, Wis.

Campbell's Winter-Chaser

ARE you thoroughly posted about the heating question? Do you know what "Rotary Air Movement" means? Do you know who invented it, and why it is vitally necessary to the health and comfort of your family, the efficiency of your heating plant, and the good you get out of your coal?

Remember, this heating question is a mighty important one—you do not change your heating plants often, and when you do, it should be with a view to getting a *life time* service. To prove how and why this is possible with our *all steel* Campbell Winter-Chaser, we will send you, *free*

"TWICE-A-DAY"

A Book on Health and Heating

The story of the *guaranteed* heat to 70 degrees, and the longest wearing, strongest furnace made. In this book we explain why you should have the Campbell Winter-Chaser in your home—large or small, new or old. It tells about the need of *moist and clean* air as well as *warm*, and explains why the large reservoir and the ample air chamber with entrance door insure all the necessary moisture and cleanliness which mean health to the family and long life to the furniture.

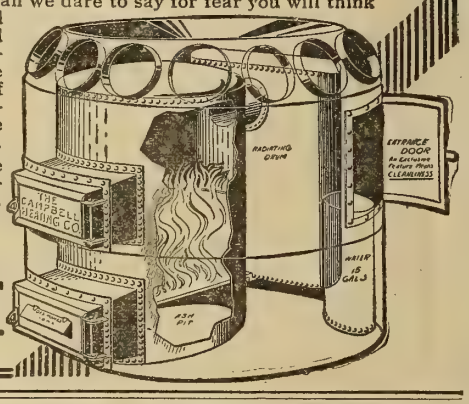
The Winter-Chaser Is Guaranteed To Give Most Heat With Least Fuel

And this statement is a calm fact which letters from happy owners prove,

And the Repairs Are Not Worth Mentioning

With ordinary care the Winter-Chaser will last a lifetime, and there is rarely a penny spent—for ten or twelve years.

The saving in coal is more than we dare to say for fear you will think we are exaggerating. So we would rather send you the booklet, and let you read these facts for yourself in black and white with the owner's name at the bottom of the letter. Those are the statements that count and there are plenty of them in the booklet.



Besides you ought to have the information and heating suggestions it gives. So write *today*. Address

Campbell Heating Co.

1213 Walnut St., Des Moines, Ia.

(Well pumping 900 gal. per minute). *(Kaffir corn yielding 857 per acre)*

Its the location!

Because the Mimbres Valley is the **only** agricultural land in a vastly populated territory, farming here is on a far more profitable basis than farming elsewhere.

Take just the one item of markets. This country has been built up and peopled by great mining industries and health sanitarium centers, which are **entirely dependent** upon Mimbres Valley for farm products. Consequently they pay **premium** prices and always will; for the simple reason that there is no other farm land, within competing distance.

Butter sells at 45c a lb., milk at 12½ a qt., eggs at 40c to 60c a doz the year round. Alfalfa always brings around $16 per ton on the field. Oats sells at $2 per hundred and wheat, corn, etc., bring much higher prices than are received elsewhere.

Consider these market advantages with the fact that the land here is wonderfully productive, rich, silt (naturally level); the climate here provides nine full months growing weather; and that you are **independent** of rainfall. Here you have irrigation under **ideal** conditions. The water used is the purest in America and proven to be **inexhaustable.**

Each farmer has his own **private** pumping plant, getting water just when needed and just as much as needed. Yet a personally owned water right here costs less than **half** what a corporation or Government controlled water right costs elsewhere. Right now you can secure land which, when fully equipped with your **own** irrigation plant, will cost only about $35 per acre. The price of land is low because it was only **three years** ago that the agricultural wealth of this Valley was discovered—that's the very reason why the price won't **stay** low long.

The climate here has brought **health** to thousands—pure, dry air, 300 days of sunshine; short mild winters, and the altitude keeps summers from getting excessively warm—nights are always cool. Here you have the unusual opportunity to **gain health** while making **bigger money.**

Deming, New Mexico

is the metropolis of the Mimbres Valley—a splendid city of 3000 with fine public buildings, grammar and high schools, paved streets, electric light, water, sewer systems, etc.—as fine a town as you've ever lived by and a good local market.

Compare this section with yours!

—the few facts we have given should urge *any* man to find out *more*. Remember we are *not* selling land—we are a body of business and farmer folks interested in developing this Valley for the prosperity of *all* those here and those who *come*. You can *depend* upon what we tell you. Your prosperity is our prosperity. Don't let another crop season start until you really *know* what the Mimbres Valley offers. Write us today and let us tell you all about it. Sec'y, 101 Chamber of Commerce, Deming, New Mexico.

Humerick's Last Call.

At Atlantic, Iowa, on February 16th, C. W. Humerick will sell fifty head of Poland China sows and his offering is one that will need no recommendation at our hands. He has selected out twenty of the very best tried sows he has in his herd for this sale, four fall sows and twenty-six gilts. These are daughters of his well-known boar, New Tecumseh, Big Jericho, Iowa Model, Smooth Wonder 2d, King Wonder, Big Buddy and Victor Hadley. These are bred to New Tecumseh, Big Tom Jr. and a grandson of old A Wonder. In a recent letter from Mr. Humerick he says: "My hogs are doing fine and by sale day they will be in the pink of condition. Most of them are showing in pig in good shape and will look well in the ring. I am selling forty head, twenty-two head of recorded tried sows, six summer and fall gilts and twelve spring gilts. They are bred to Big Tom Jr. 183209 by Big Tom and out of Long Queen, a full sister to Lawson's Yong King's Equal. The most of the offering is bred to him. Also New Tecumseh 163801 by Iowa's Model, he by Crow's Model and out of Miss May, she by Tecumseh Longfellow, and a young boar, More Wonder 198749 by P. Wonder, he by Ellerbroek's A Wonder and out of Lady Mogul V., sired by Big Victor. He is a promising young boar. Some of my best sows are Extended Queen 4th 400946, out of Extended King by Extended by old Expansion and out of Ideal Beauty 2d by Big Jericho. She weighs 600 pounds, has a nice arch back and I think is an outstanding good sow. She is bred to Big Tom Jr. for an April 10th litter. Another is Long Prospect 435996 by Big Prospect and out of Rill's Pride 3d by Tecumseh Longfellow, an extra big, long sow and bred to New Tecumseh for a March 8th litter. A spring yearling gilt is out of Long Prospect, an outstanding good one by Big Crow, he by Big Surprise, and is safe to Big Tom Jr. for a March 5th litter. Other sows are by Smooth Wonder 2d, New Tecumseh, Big Jericho, Commander 2d, Mammoth Prospect, Model Chief, Chief Wonder, P. Wonder, Big Tom Jr. and Victor Hadley." The sale will be held right in town and it will be one of the best offerings of Poland China sows that will be sold in this part of the state this winter. Make it a point to be at Atlantic on February 24th if you want some of these good sows. M. T. White will be field man for The Homestead at the sale.

Barnes' Crimson Wonder Sale.

At Petersburg, Neb., on Thursday, February 13th, A. R. Barnes will sell forty-five head of high-class and well-bred Duroc Jersey brood sows and those who have seen his herd at the fairs and paid any attention to his winnings and what his herd has been doing the past few years will very naturally expect that he will have some good things in this sale. In this respect they are not going to be disappointed either. His offering will attract the attention of discriminating buyers who want valuable sows of the historic Crimson Wonder family, closely connected through one of the greatest Crimson Wonder boars of the breed, Belle's Crimson Wonder, first-prize junior yearling and grand champion boar of the breed at the Nebraska State Fair, 1910. The get of this boar are outstanding good and in our travels the past six weeks we have seen many of them that stood out prominently good in herds of high character. This offering consists of thirty-two yearling and tried sows, sired mostly by the champion, Belle's Crimson Wonder, and others by B. & L.'s Wonder and four extra good yearlings by Belle's Wonder. There are also two very choice big-type sows by Gold Dust Jim 3d, a sire that has gotten much of Mr. Barnes' best producing stuff. There are thirteen toppy and growthy spring gilts by Belle's Crimson Wonder, B. & L.'s Wonder and Blue Ribbon Model. Among these are three extra good ones out of Peaches and Cream and sired by Belle's Crimson Wonder, the mating that produced the sensational show litter the year that Belle's Crimson Wonder won the championship. These gilts were in the first-prize produce of sow exhibit at the Nebraska State Fair last fall. They are bred to B. & L.'s Wonder or Golden Model 3d. The offering is bred mostly to the champion, Belle's Crimson Wonder, and B. & L.'s Wonder, the latter a boar that we consider a topnotcher as a sire. A few are bred to Golden Model 3d and Col. Chief. Send for a catalog of this good offering of Duroc sows and attend the sale or send bids to E. Z. Russell, who will represent The Homestead at this sale.

Lamb's Great Sale of Duroc Sows.

Fed Duroc Jersey offerings will attract more attention this winter than will the sale of A. W. Lamb at Albion, Neb., on February 12th, and we think, after looking over his sale sows, that it is by far the best lot he has ever driven through a sale ring. His repeated winnings at the state fair the past few years in competition with the greatest herds in the land have made the Lamb Durocs sought after by the best breeders east and west. He has selected seventeen of his very best sows and has bred these to the old champion Nebraska State Fair boar, Belle's Crimson Wonder, one of the greatest Crimson Wonder boars that has ever been seen in the West. Ten of these are bred to B. & L.'s Wonder, also a noted fair winner; four to Golden Model 3d, a son of the champion boar, Golden Model II., and five to Dusty Crimson, the champion boar at the Albion County Fair, and he was the hog that defeated all of the state fair winners. He is selling thirty-five choice gilts and ten of these are daughters of Belle's Crimson Wonder. Fifteen of these are sired by B. & L.'s Wonder and they are bred to Belle's Crimson Wonder. Some of the other gilts are sired by Ray's Wonder and Red Chief Wonder, and just remember what we say to you about them, that these are some gilts and you will say so when you see them. If you are looking for a real choice thing in the way of a brood sow or some great gilts, make it a point to attend Mr. Lamb's sale. E. Z. Russell will represent The Homestead at the sale and will care for any bids sent in his care.

Pfander & Sons' Giant Polands at Auction.

When it comes to talking about big Poland Chinas they will all have to take off their hats to J. W. Pfander & Sons, Clarinda, Iowa. When it comes to size there is no herd living that can show them any larger than can Pfander & Sons, and this is a statement that will be borne out by investigation and inspection. For the past eight or nine years we have been visiting the Pfander & Sons herd as well as various other herds throughout the West and we can truthfully say that when it comes to the really big ones the Pfander & Sons herd will make them all sit up and take notice. In their forthcoming annual winter sale on February 26th they will sell forty-five head and it is an offering that has every reason to attract the attention of those who are looking for strictly large-type Polands. There are a whole lot of attractions again in their sale, among which are a great many daughters of their former celebrated old boar, Long King, as well as several daughters of old A Wonder. Another feature of their sale is that they are selling three of the best sows they have ever listed for a sale and these are bred to A Wonder. These in themselves should attract breeders from both far and near. They are selling one matured sow by Long King and eight fall yearlings and these will make great foundation sows for anybody. No better herd sows of the extremely large kind ever lived than these daughters of old Long King, and this is one reason why we feel like urging our friends to buy one or two of these. One of the best sows they ever sold is King's Jumbo 3d, that will be No. 1 of the catalog. She is a daughter of Long King and is out of a daughter of old Jumbo. She is bred to their young boar, King of Wonders, a son of the noted A Wonder, and she will be a good sow for any breeder to buy. In the fall yearling, Pawnee Belle, they are offering a splendid sow and she goes in bred to old A Wonder. She is one of the best sows they will sell. In Nos. 3, 4 and 5 they are selling some splendid fall yearlings by old Long King. One of these is out of Wray's Giantess and the other is out of Crescent Giantess, and she in turn was a daughter of that famous old brood sow, Giantess. These are all bred to that splendid boar of theirs, Big Ben. Another great line-up of fall sows is Nos. 6, 7, 8, 9 and 10. The first sow named is a daughter of Mammoth King, that in turn is a son of Long King, and the remainder are all sired by old Long King. Any one of these will make a great brood sow and they are all bred to Big Ben. The two A Wonder fall yearlings are strictly choice sows and these are bred to Big Ben also. We might go on indefinitely mentioning the many good things they are selling, but you will get it all in their catalog if you will only send for it. It is a hummer from beginning to end and you will be interested in seeing it. When writing for it kindly mention this paper. M. T. White will represent The Homestead at their sale and will care for any bids sent in his care.

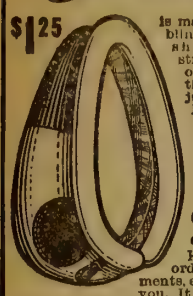
Jepson's Poland China Sale.

On February 15th, A. T. Jepson, Moorehead, Iowa, will sell forty head of Poland China bred sows, and he is putting up one of the best lots of sows that has ever gone through a sale in his section of the state. These sows are bred to his three boars now in use in the herd, viz.: Polly's Chief Price, a son of Miller's Chief Price, an exceptionally good and a big boar bred by John Miller; Combination Chief, a son of Big Combination, selected by C. C. Carlin as the best boar in the fall sale of Joe Goltry at Chariton, Iowa, and Giant King, a son of King Giant, that splendid boar that stood at the head of the Frank Owens herd at Weston, Iowa, and was formerly chief herd boar in the J. M. Sheehan herd at Stuart, Iowa. The sows that he will sell in this sale will be bred to these three boars. He will sell forty head, ten matured and tried sows, ten fall sows and twenty spring gilts. The fall sows will be sired by Pawnee Chief, a son of the noted prize-winning boar, Sioux Chief, and the spring gilts will be sired by Pawnee Chief, Big Wonder, Big Jumbo, King Giant, Big Hadley 3d and Ideal Wonder. The fall gilts will all weigh over 400 pounds and the spring gilts 300 pounds. No. 1 of the sale is a granddaughter of Pfander's Long King. She is a two-year-old sow weighing close to 600 pounds. She is as smooth as an apple and is bred to Polly's Chief Price for an early March litter. No. 2 is a yearling sow by Commander's Hadley. She is from the Owens herd and there will not be many better big-type sows sold this winter. She is a great big smooth sow and she is bred to Polly's Chief Price. No. 3 is a fall gilt by Pawnee Chief and out of a dam by Lonergan's Big Victor. She is a good, long, big-type gilt and she is bred to Polly's Chief Price for an early March litter. No. 4 comes from the Remington herd and is a daughter of that noted breeding boar, Big Hadley's Model. She is a splendid big sow and is bred to Big Combination for an early March litter. She is also the dam of a good spring gilt by Big Jumbo. This gilt is No. 20 of the catalog and is bred to Big Combination for a March litter. The three gilts by Big Wonder, out of Orange Lady by Orange Wonder, a half-brother to Big Orange, are big and will make fine brood sows weighing 300 pounds or better. They are bred to Giant King and Big Combination for early litters. Every sow in the sale is a good one. Write for his catalog and kindly mention The Homestead. C. C. Polly will represent The Homestead at the sale and will look after any bids sent in his care.

Can your horse use his full strength?

Horses with sore shoulders, or galls can not do their best work unless they have a comfortable, non-irritating collar. Besides being comfortable, the Lankford Horse Collar will cure galls and sore shoulders.

The Lankford HUMANE HORSE COLLAR



$1.25 is made with the idea of enabling a horse that has sore shoulders to put his full strength into his work without hurting him. It does this because it can be adjusted to fit any shape neck. It is stuffed with pure medicated cotton, which absorbs sweat and impurities thrown off by the sores and effects a speedy cure. Lasts three or more seasons. Acts as collar and pad combined.

Get our Memorandum Account Book. It's FREE

Keep a record of your sales, orders, business deals, appointments, etc., in the book we will send you. It won't cost you a cent. Send for it now—before you forget it. If your dealer hasn't the Lankford Collar, write us. Prices, $1.25 up.

LAW QUESTIONS CONSIDERED.

DEEDS WITH CONDITIONS.

A Subscriber, Sawyer, Kan.—A and B are husband and wife, seventy and sixty-three years old, respectively. A owns a large tract of land in Kansas and wishes to deed all of it to his children in proportion as they deserve it, keeping an annuity in the various tracts of $500 to $800 for himself and his wife, payable semi-annually during their lives, such conditions to be put in the deeds to the children. A's wife concurs in this idea. How should such conditions be worded so there will be no chance for a lawsuit?

Answer.—The only safe and proper method for A and B to pursue is to have a good, local lawyer prepare the deeds to the children, after fully explaining to him the conditions upon which such conveyances are to be made. An attempt to make or prepare the deeds themselves would be likely to breed lawsuits.

PARTITION FENCE IN ILLINOIS.

Mr. Arthur Drake, Clare, Ill.—I own 160 acres of land. Two neighbors own adjoining land on two sides of it and own half of the partiion fence. I intend to incluse my land with a woven-wire hog and sheep-tight fence. Does the law require my neighbors to make their portions of the partition fence tight in like manner, and if so, what steps must I take to have them do so?

Answer.—The law requires your neighbors to build and keep up a lawful fence on half of the division line between your land and theirs. A lawful fence must be four and a half feet high consisting of rails, timber, boards, stone, hedges, barbed wire, or whatever the fence viewers of the town or precinct shall consider equivalent thereto, provided that in counties under township organization the electors at any annual town meeting may determine what shall constitute a legal fence. You can only compel your neighbors to make a legal fence. If they refuse to do so you should complain to the fence viewers, who will order it done and if your neighbors then fail to do so you may build such fence at their expense and may recover such expense with costs of suit.

EXEMPT PROPERTY—LIEN.

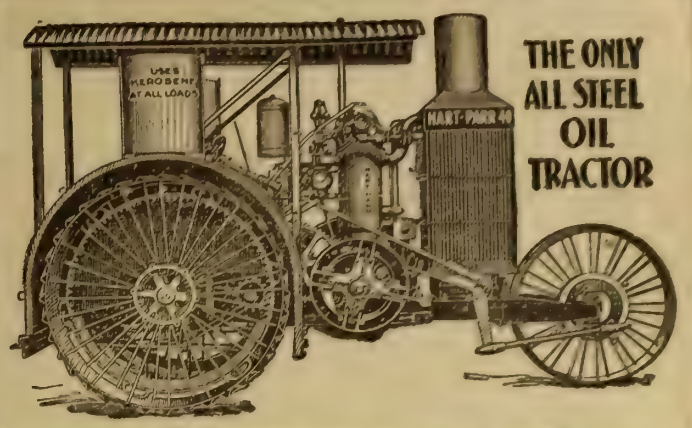
A Subscriber, Marshalltown, Iowa.—(1) What amount or articles are exempt from foreclosure of a mortgage in the state of Montana? If about the same as in Iowa, mention the exceptions—I have the Iowa code. (2) Does the law of Montana provide for a lien on grain in favor of the thresherman?

Answer.—(1) The law of Montana exempts to a farmer from sale or execution, farming utensils or implements of husbandry, not exceeding in value $600, two oxen, or two horses or mules and their harness, one cart or wagon, set of sleds, food for oxen, horses, cows or mules for three months, seed, grain and vegetables on hand to amount of $200. Also all wearing apparel of family, chairs, tables, desk and books to value of $200, household tables and kitchen furniture, provision and fuel for three months, horse, saddle and bridle, two cows and their calves, four hogs, fifty fowls, clock and family pictures, and feed for animals for three months. If such articles or any of them are mortgaged such are not exempt from foreclosure of the mortgage. (2) The law of Montana provides no specific lien in favor of threshermen.

INHERITANCE TAX IN NEBRASKA.

A Subscriber, York, Neb.—Is there an inheritance tax law in the state of Nebraska, and if so, what are its main features?

Answer.—There is such a law in Nebraska. When an estate passes to a father, mother, husband, wife, child or children, brothers or sisters, or wife or widow of a son, or husband of a daughter, or any adopted child or children, if such estate amounts to more than $10,000 an inheritance tax must be paid on the excess above that amount at the rate of $1 on every $100. When such estate passes to any uncle, aunt, niece, nephew or any descendants thereof, the rate of tax is $2 on every $100 in excess of $2,000. In all other cases the rate of tax is $2 on every hundred up to $5,000, $3 on every hundred between $5,000 and $10,000, $4 on every hundred between $10,000 and $20,000, $5 on every hundred between $20,000 and $50,000 and $6 on every hundred when estate is more than $50,000. Estates of $500 or less are exempt. The tax is due at the time of death, but must be paid within one year.



THE ONLY ALL STEEL OIL TRACTOR

A MONEY MAKER ON CORN BELT FARMS

HERE is a general purpose farm tractor, built especially for Corn Belt farms. A tractor that really does make good on Corn Belt farms. It's the

Hart-Parr Oil Tractor

Not a cheap, over-rated, flimsily constructed machine that soon wears and tears itself to pieces, but a tractor designed right, built right and adjusted right in every particular. It's the only all steel oil tractor ever built. The frame, axles, drive wheels, gears, etc., all are of the highest grade steel. This construction gives you a tractor with 50% greater strength than any other. There is no dead, useless weight to drag around and waste power.

Wonderful Drive Wheels

The drive wheels are fitted with wave formed lugs, riveted to the tires. These lugs enable the tractor to work on soft soil that would force other tractors to stand idle. As soon as spring opens up, you can start plowing—then disc, harrow and seed in double quick time, while weather conditions are most favorable. Hart-Parr drive wheels work perfectly on newly plowed ground, and do not injuriously pack the soil.

The countless other farm jobs that this tractor will do quicker, better and cheaper than horses, makes it the biggest profit earner on Corn Belt farms of 160 to 500 acres. Not only is it an ideal outfit for every kind of traction work, but it also furnishes unfaltering power in the belt. It will drive separators, shellers, shredders, huskers, silo fillers—in fact, all belt driven farm machinery—with a steady hum that means more dollars in your pocket, with all hard drudgery entirely eliminated. In spare time, use the tractor for building good roads and add to your earnings.

No matter what kind of work you are doing, one man easily operates and cares for a Hart-Parr Tractor. It's a One-Man outfit. Uses **cheapest kerosene** for fuel at all loads. The engine is oil cooled.

We want to send every Corn Belt farmer our new 1913 catalog, fully describing our 30 and 40 BHP Corn Belt Tractors. Write for your copy today, and also ask for our literature on power farming costs.

HART-PARR COMPANY, 228 Lawler St., Charles City, Ia.

News of the Sale Ring.

Freed's Duroc Jersey Sale.

S. P. Freed, Ames, Iowa, held his ninth annual public sale of Duroc Jerseys on January 20th. He had the usual large attendance, although the percentage of breeders was not as large as the character of the offering justified. Forty head of sows were sold at an average of $46.04 each. It was an extremely even sale, $90 being the top figure and nothing less than $25. The complete list of animals sold is as follows:

Lady Browning, W. W. Opie, Winfield, Kan.	$63.00
Litter sister, New Jersey Agricultural College, New Brunswick, N. J.	62.00
Chief's Lady, Harry Sheehe, Ames, Iowa	52.00
Chief's Lady 2d, Joe Gladwin	50.00
B. & C.'s Col. sow, E. A. Calkin, Ruthven, Iowa	65.00
Ohio Girl, C. J. Yarn, Ankeny, Ia.	68.00
Freed's Col. yearling, Harry Sheehe	46.00
Freed's Col. yearling, Oliver Cole, Forest City, Iowa	44.00
Freed's Col. yearling, L. E. Mather, Ames, Iowa	41.00
Freed's Col. yearling, George Glad, win	38.00
Rupert's Best, Theo. Vanek, Lamont, Iowa	72.00
Freed's Col. Lady 1st, G. W. Mead, Corydon, Iowa	50.00

Yearling, not cataloged, Will Thompson	51.00

The Herring Poland China Sale.

One of the largest crowds seen at a Nebraska sale this year was in attendance at Columbus, Neb., on January 23d, when Chas. Herring disposed of fifty-four head at an average of $71. Breeders were present from all parts of the state as well as many from Iowa and Illinois, and they took hold of the offering in good shape. The top of the sale was Smooth Mollie 2d and she went to R. B. Baird at $300. It was a good offering and was well appreciated by the breeders present. Col. W. B. Duncan cried the sale. Below we list those selling for $40 and above:

1. E. E. Matticks, Spring Ranch, Neb.	$125.00
2. J. W. Pfander & Sons, Clarinda, Iowa	95.00
3. J. F. Collins, Chicago, Ill.	200.00
4. R. M. Castle, LaHarpe, Ill.	77.50
5. A. T. Jepson, Moorehead, Ia.	62.50
6. A. L. Bedell, Diagonal, Iowa.	42.50
7. Grant Brennan, Central City, Neb.	55.00
8. R. B. Baird, Central City, Neb.	300.00
9. W. M. Mather, O'Neill, Neb.	105.00
10. J. F. Collins	100.00

De Young's Duroc Jersey Sale.

The sale of Duroc Jersey hogs held by the De Young Bros. at the L. L. De Young farm in the edge of Sheldon, last Friday, was a decided success. It ws a well-attended-sale and the crowd which was present was a crowd that wanted hogs. These men have a fine herd and the old-time customers of the gentlemen know that the hogs sent out are good doers. This reputation has made good for the men, and the fine lot of sows that were put through the sale ring last week were certainly appreciated by the men who were at the sale. Only sixty head were cataloged, but several over that were sold, and it did not require much persuasion to find buyers for the sows, either. The top of the sale was the object of considerable competition before she was finally knocked down to A. H. Moen, Inwood, Iowa, at even $150. She was run to this figure by two prominent breeders, C. A. Devaul and Grant Lynn, both of whom were prominent bidders on the best stuff in the sale. Ralph Bartels, Sioux Center, Iowa, bought one of the choicest gilts in the sale at the top price for the spring pigs of $100. Among the other buyers who took home good ones

For the Telephone For the Gas Engine

Costs Less Than a Half Bushel of Corn

At a cost of a few pennies for each French Dry Battery—less than the price of half a bushel of corn—you can have a supply of electricity "on tap" always.

Don't Miss This!

French Dry Batteries will save you endless time, miles of steps and lots of money. The next time you fill up that dangerous kerosene lantern and "hike" for the barn in the dark, remember that French Dry Batteries in an electric flasher would supply the necessary light. Think of the advantage of having a telephone line from the house to the barn, or being able to open the front gate without leaving the porch and dozens of other conveniences. There's no dirt, delay and inefficiency with a French Dry Battery—the "juice" is there right on the job ready for instant use.

These marvelous batteries are scientifically constructed packages of electricity. They are *special* purpose batteries built for a *special* job. Thousands of auto owners insist on the French "Auto Special"—the dry-cell battery with the *blue* label. The *green* labeled French Telephone Cells are for all household uses.

Long-Life Batteries

French Dry Batteries give a strong current for a *long* period. Ordinary batteries give a weak current for a *short* time and then quit altogether. French Dry Batteries *save time* for a *long time*. Your dealer will tell you the particular French Battery you need. If you want to know more about these wonderful French Dry Batteries and how they can help you do your farm work, send your name and address on a postal. We'll answer by return mail. Write tonight.

FRENCH BATTERY & CARBON CO.
2 Inca Street, MADISON, WIS.

were F. H. Dickey, Emmetsburg, Iowa; T. E. Bly, Brewster, Minn.; R. C. Veenker, Gearke Bros., C. E. Walden, A. L. Neville and others whose names are listed below. The average of the sale was over $60 on the cataloged lots, and the total of the entire sale was right at the same figure. Col. J. A. Benson cried the sale. The following is a list of the buyers at $50 or more:

1.	Chris Larsen, Round Lake, Minn.	$ 96.00
2.	L. B. Cranston, Estherville, Iowa	107.00

Boesiger's Duroc Jersey Sale.

A very nice breeders' attendance and a fair local gathering was on hand at the annual sale of Duroc Jersey bred sows made by David Boesiger, Cortland, Neb., on January 27th. Sows bred to Widle's Wonder, the first-prize boar at the Nebraska State Fair last season, were in good demand, and added a good many dollars to the total of the sale. The top was $70, the same being paid by E. J. Brown, Osceola, Neb. She goes to one of the oldest and strongest herds of the state and was well worth the price. Wm. Bornemeier, Elmwood, Neb., was a contending bidder on all of the better ones and secured one or two. Frank Kaiser, Daykin, Neb., was one of the chief supports of the sale, taking two head and contending for all of the good ones. Colonel Callahan conducted the sale in his usual efficient manner. The entire offering made an average of $42 per head. Those selling for $35 or more are listed:

1.	E. J. Brown, Osceola, Neb.	$70
2.	B. B. Jackson, Cortland, Neb.	50
5.	John Boesiger, Firth, Neb.	65
6.	Wm. Retzlaff, Bennet, Neb.	42
7.	Wm. Bornemeier, Elmwood, Neb.	50
8.	Frank Kaiser, Daykin, Neb.	54
12.	J. T. Whalen, Cortland, Neb.	42
13.	B. B. Jackson	56
14.	S. L. Hunter, Benkleman, Neb.	51
15.	Frank Kaiser	51
21.	E. J. Brown	35
22.	E. E. Griser, Cortland, Neb.	37
23.	John Boesiger	42
27.	F. G. Moormere, Firth, Neb.	36
28.	John Boesiger	52
32.	Chas. Bettenhausen, Princeton, Neb.	39
38.	J. T. Whalen	40
39.	Wm. Pap, Cortland, Neb.	44

The Long Poland China Sale.

A good turnout of farmers and a number of breeders were present at the James G. Long sale at Harlan, Iowa, on January 24th, and he sold fifty-five head at an average of $35. No. 11 topped the sale at $150, going to D. J. Blumendahl, Alton, Iowa. Cols. "Billy" Cooper and Nels Kraschel cried the sale and both did excellent work. Below we list those selling for $30 and above:

1.	Matt Domino, Defiance, Iowa.	$40
2.	Tom Leytham, Harlan, Iowa.	51
4.	Tom Leytham	63
7.	C. W. Roberts, Hayesville, Iowa	45
5½.	Fred Louie, Harlan, Iowa.	39
6.	Mike Christiansen, Harlan, Iowa	40
8.	J. M. Nesbitt, Aledo, Ill.	70
5.	Matt Domino	35
9.	Mike Christiansen	56
11.	D. J. Blumendahl, Alton, Iowa.	150
12.	C. C. Nicholson, Lohrville, Iowa	70
13.	J. M. Pemberton, Fayette, Mo.	33
14.	C. J. Zimmerman, Earling, Iowa	35
15.	C. J. Zimmerman	35
20.	Fred Louie	31
21.	Joe Roseman, Harlan, Iowa.	38
38.	Geo. Larson, Harlan, Iowa.	31
32.	Earl Miller, Randolph, Neb.	30
33.	John C. Nyrup, Harlan, Iowa.	35
31.	J. G. Westrope & Son, Harlan, Iowa	31
39.	Chas. Long, Harlan, Iowa.	39
50.	C. C. Polly, Whiting, Iowa.	30
58.	John Robinson, Harlan, Iowa.	30
41.	Nels Jorgenson, Corley, Iowa.	39

Herring's Duroc Jersey Sale.

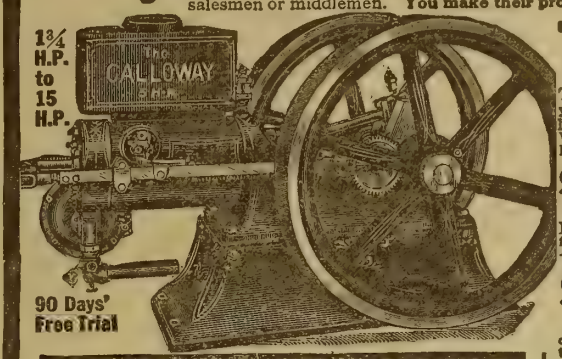
F. H. Herring, Kalona, Iowa, dispersed his entire herd of Duroc Jerseys in Iowa City, Iowa, January 21st. The sale was very successful, as Mr. Herring had a fine lot of stock and every buyer got extraordinary values. The top of the sale was Golden Model 30th, a prize-winning boar, selling to H. A. McCaffree. F. L. Bissell was a good buyer and bidder on the better

Take My New Engine —Use It 90 Days FREE!

Take one of the wonderful new 1913 Model Galloway Gasoline Engines —use it right on your own farm for one month, two months or three months **absolutely free.** Write at once for my 1913 catalog—pick out the size and style engine you want me to ship you on this free offer—I'll ship it **immediately** Put it to work on your farm the day you get it. Keep it working every day. Watch it carefully Compare it with any and every engine on the market that you can get a line on *no matter what the price.* If anybody else is trying to sell you an engine, tell them to make you the same offer that Galloway does. Tell them Galloway is willing to put his engine right side by side on your farm with any other engine in the world *and let you be the judge.* Tell them you don't want any engine salesman trying to influence your judgment—you're buying engines not conversation. Don't listen to a man who isn't willing to let you judge his engine on its merits. The man who is afraid to meet me on that kind of a proposition *is no man for you to do business with.* Keep my engine a whole month or even two months or three months if you want to. *Then if you believe that there is a better engine than the Galloway anywhere in the world at any price, tell me so and I'll take it back and I'll pay all the freight charges both ways, so that you won't be out one single cent for anything.* If you do decide to keep the Galloway, just tell me so and I'll give you the benefit of the biggest and most liberal engine offer ever made.

I'll Save You $50 to $300 Sure!

I'll make you an actual present of $50 to $300. I'll positively guarantee to save you at least that much in the first cost alone. I'll sell you a Galloway direct from my factory where it is made. **You pay me just what it costs to make it** plus one very small profit—**that's all!** There are no jobbers, wholesalers, retailers, salesmen or middlemen. **You make their profits yourself when you buy a Galloway.**



The Only Way Is the Galloway

That's the way to buy an engine, **and it's the only way that's absolutely fair to you,** and that's the only way that I'll sell an engine, because I won't keep a dollar of any man's money **unless he would rather have my engine than the cash.** When a man will tell me that—then and not until then do I consider a sale as made. Every single man who does business with me is absolutely protected by my

$5,000 Challenge—$25,000 Guarantee

I back every promise, every statement and every claim with $5,000 **in cash.** I protect every one of my customers by a $25,000 guarantee of **absolute satisfaction.** Understand, I don't say **reasonable satisfaction** but **ABSOLUTE satisfaction —AND YOUR WORD is always good with me.**

Special Service Bureau FREE

My force of high salaried Engine Experts are at your command absolutely without charge. They will tell you how to select exactly the engine which is best suited for your particular purposes; how to test and judge an engine; how to use one to best advantage; how to fit up a power house—besides answering fully and completely any question about the care and operation of an engine. This is absolutely free to you whether you buy a Galloway or not.

20,000 REASONS

Here are a few expressions from farmers now using Galloway Engines. Twenty thousand others have had exactly the same experiences. These are men just like yourself. **Before they bought a Galloway they were in exactly the same position as you are now.** You will say exactly the same as they do after you get your Galloway.

Alex. McLachlan, Argyle, Mich. I received my Galloway Engine last week and it is all right. Everybody says it is a dandy engine. **Some of my neighbors got bit on other engines** by paying $400 for a 9 h. p. and $460 for a 10 h. p. I like your engine dandy.

Fred Ruthardt, Mt. Vernon, S. D. I must say the engine is all right. **I saved about one hundred dollars in** buying from you. I don't want to be without the engine, not at all. I use it for shelling corn and grinding feed.

Frank Peck, Dorchester, Neb. My Galloway Gasoline Engine does lots of work for me. It shells corn, saws wood and grinds feed. I have no trouble with it. It is simple and easy to start. **My twelve-year-old boy starts it easily.**

Important! Get My 1913 Proposition

This year, I've got something better to offer than I ever had before. **I've got a plan by which you may get your Galloway Engine either wholly or partly free and, besides, without any soliciting or canvassing, whatever.** I can't explain it now, but I tell you all about it in a personal letter when you write me.

Engine Book FREE

Now, don't wait a minute. Get my Engine Book and my special 1913 offer right away. You won't be under any obligations at all—I just want you to fill out the coupon or mail me a postal or letter, that's absolutely all I ask. If you haven't got a pen or pencil handy, go and get one and write me right away.

You Can Do ⅓ More Work

How much would *you* save every year if *your* wagon would do one-third more work? Do you want to save it?

Every machine on the farm has been improved, except the farm wagon, which is used the most. The Schuttler Roller Bearing Wagon will save millions of dollars to the farmers of the United States every year by its economy of operation.

Peter Schuttler Roller Bearing Wagons

Have Revolutionized Farm Wagon Construction

They run one-third to one-half easier and require less power to pull the load. They go more miles, and two horses can easily do the work of three. They save time—horses—harness—feed—repair bills—greasing—trouble, and wear on the wagon. It means a big saving to you in time and money, and is much easier on the horses. Official tests by Road Experts of the U. S. Department of Agriculture show remarkable results. You owe it to yourself to investigate.

Write For Free Book

that gives full information about the improved Schuttler Roller Bearing, records of Government tests, etc.

Eakle & Son's Duroc Jersey Sale.

On Tuesday, January 31, 1913, S. E. Eakle & Son held a most successful Duroc sale at Prophetstown, Ill. While the average on forty-two head was $48, the quality of the offering was such that more money could have been paid and no one hurt. Cols. H. S. Allen, C. C. Plumley and Fruin did excellent work in selling. Below is a partial list of buyers and prices paid:

1.	H. Bigelow & Son, Aledo, Ill.	$ 67.50
2.	E. E. Stemen & Son, Middlepoint, Ohio	165.00
3.	M. Whiteman, Monroe Center, Ill.	57.00
4.	E. H. Parker, Janesville, Wis.	50.00

Goodenough's Hampshire Sale.

One of the good illustrations of the appreciaiion of the work of a constructive breeder was the Hampshire sale held by A. L. Goodenough, Morrison, Ill., on January 27th. Mr. Goodenough has been recognized as an excellent breeder and judge by all Hampshire breeders and the average he made in this sale shows that breeders know the value of the class of hogs bred by Mr. Goodenough and were willing to pay the price for them. No. 1 was the top sow, selling at $250 to H. Atkinson, and she was considered a decided bargain at the price. Clayton Messenger was the contending bidder on this sow and on many of the other good ones. C. A. Brook, H. Niswander, E. E. Piper, J. D. Piper, Tice Bros. and John Vigor were liberal bidders and buyers of the good ones. In fact, good Hampshires were the only kind sold in this sale and breeders expressed the opinion that a better lot had not been sold in one sale. Colonels Reppert and Igleheart did good work in selling the offering. A list of the sales is appended:

1.	H. Atkinson, Mt. Sterling, Ky.	$250.00
2.	A. Oitiker, Barry, Ill.	130.00
3.	E. E. Pifer, Palestine, Ill...	112.50
4.	W. Kennedy, Maple Park, Ill.	59.00
5.	Clayton Messenger, Keswick, Iowa	76.00
6.	T. D. Tice, Pella, Iowa.	87.50
7.	C. A. Brook, Washington, Ia.	57.50
8.	W. Bull, Union Grove, Iowa.	62.50
9.	J. D. Pifer, Palestine, Ill....	71.00
10.	Hughes Atkinson	72.00

The Shade Duroc Sale.

One of the greatest sales of Duroc Jersey sows held so far this year was that of J. A. Shade at Kingsley, Iowa, on January 21st, when he disposed of seventy head of sows and two boars at an average of $76 80. The top of the sale was that splendid boar, Missouri Model Top, and he went to R. J. Weiland, Canistota, S. D., at $435. The top of the sows was Sunlight and she went to Maloy Bros. at $210 and her litter sister went to Frank Gingsbach at $200. It was a great sale, everything going at good, remunerative prices. Below we list those selling for $40 and above:

1.	Missouri Model Top; R. J. Weiland, Canistota, S. D.	$435.00
2.	King Superba; John Moise, Lawton, Iowa	85.00
3.	L. E. Michaels, Heckling, S. D.	105.00
4.	Geo. Colt, Puckawana, S. D..	45.00

54.	Geo. Summeymyer, Kingsley, Iowa	60.00
55.	Ed Kyle, Kingsley, Iowa...	62.50
56.	John Moise	40.00

Millions of smokers have learned that they can roll for themselves better cigarettes from

GENUINE
"BULL" DURHAM
SMOKING TOBACCO

than any ready-made cigarettes money can buy.

(FORTY "ROLLINGS" IN EACH 5-CENT MUSLIN SACK)

Here are figures every smoker should know:

10 ordinary ready-made cigarettes cost . . 5 cents
10 better ready-made cigarettes cost . . . 10 cents
10 more expensive ready-made cigarettes cost . 25 cents
40 of the **very best possible cigarettes,** rolled from one muslin sack of "Bull" Durham, cost **5** cents

WHY PAY MORE!

"Bull" Durham is smoked by more millions of men, in pipe and cigarette, than all other high-grade tobaccos combined!

A book of "papers" free with each 5c muslin sack

YOU OUGHT TO OWN A BUGGY

Like This Triple Panel Automobile Seat Buggy

We have sold 49,000 of these buggies and every last one of them has given absolute satisfaction. The strongest argument that can be presented in support of any vehicle is that it has proven absolutely satisfactory to the users under the most trying conditions and severest tests. This is the exact standard that all our vehicles live up to. Our Triple Panel Automobile Seat Buggy is a stylish, comfortable, easy running and substantial vehicle that anyone would be proud to own and ride in. In addition to combining all the latest features in design and construction we are offering this vehicle to you at a price that is at least $35.00 less than you would have to pay for a similar buggy from your home dealer.

$59.90

Shipped at Once From Our Warehouse Near You

These buggies are carried in 13 cities throughout the country and are shipped from the city nearest you. This insures prompt service and low freight charges. We owe the enormous growth of our vehicle business entirely to the fact that we build vehicles to last and give absolute satisfaction.

First we satisfy ourselves that our vehicles are the best that can be built and the genuine service resulting from this standard makes satisfied customers.

Our Big Special Vehicle Catalog for 1913

Is now ready for you, brimful of quality vehicles of all styles at bargain prices. This handsome book is profusely illustrated in colors and describes every vehicle in detail. There is nothing left to the imagination, everything is plainly shown and clearly explained. You are as safe in ordering from it as if the vehicle actually stood before you.

FREE

A BOOK BRISTLING WITH VEHICLE FACTS YOU OUGHT TO KNOW. SENT POSTPAID.

Wedd & Son's Sale of Big, Smooth Poland Chinas.

Geo. Wedd & Son, Springhill, Kan., will sell on Thursday, February 20th, at their farm adjoining Springhill, fifty head of big-type Poland China bred sows that should attract from a wide territory, as it is becoming more generally known each year that these gentlemen are producing hogs that make good wherever they go. They are conservative gentlemen who have let the hogs do the bulk of the advertising. Ten head of the offering are tried sows and mostly the get of their first herd boar, Kansas Wonder; sixteen are fall yearlings by Wedds Expansion; twenty-four head are spring gilts by Wedd's Expansion, Wedd's Long King by Long King's Equal and Black Prince by Prince Ito. The two latter boars were purchased in the fall of 1911, Wedd's Long King costing $150 when seven months of age. He is undoubtedly the largest boar of his age in Kansas and is proving an outstanding sire. Practically all the sows bred to him were sold last year and as Wedd & Son wanted a few more of his gilts for this sale they tried to buy of those who had them, but could not get prices on any. He is also as heavy-boned a boar as one usually finds and, barring accidents, will make a larger boar than his sire or grandsire and has more quality. Twenty-four head are bred to him and they should be appreciated. Black Prince was bred by Mr. Robinson, who says his sire, Prince Ito, was the best boar he ever owned. He is a more compact boar, yet is one of the larger type and gets stock that pleases. Wedd's Expansion, a rare breeding boar by old Expansion, has been used on a number of the sows and those who have bought this line of breeding have been pleased.

Very few farmers realize the many uses to which one of the very commonest of household products can be put. We all know that Lewis' lye is best for making soap, softening water, conditioning hogs, spraying trees, vines and vegetables, destroying vermin, etc. There are probably over 100 different ways in which Lewis' lye not only can be used, but in which it is the best for the purpose. Among these dehorning cattle is very important, as it can be done with Lewis lye without trouble and with no danger to the calf. The best time to dehorn by this method is when the calf is about six weeks old and it can be done equally well by two different methods. First grease the root with a good solid grease. Wet the buttons and place on a small piece of lye about the size of a kernel of corn. The other method is to swab the buttons after being greased with a strong solution of lye and water, about one-half can to a pail of water.

Alvin V. Rowe, Pres.

"Can't-Sag" Gates Save You BIG MONEY

Cost only one-third as much as ordinary iron, wire or gas pipe gates, but last twice as long. Neat in appearance—best and strongest gate made—light, easy to handle, opens both ways. Boards are double *bolted* between eight angle steel uprights and double truss braces. *guaranteed never to sag.*

Cost Less Than All Wood Gates—Last 5 Times as Long

Can't Sag Gates are furnished complete, ready to hang, or just the Gate Steels which include everything except the boards. Patent self-locking hinge feature—reinforced two piece malleable hinges. Six Triangular Truss Braces make gates extra strong.

Improved Elevating Attachment permits the gate to be raised full length from 5 to 30 inches, so small stock can pass under, and to swing over snow.

30 Days Free Trial and 5 Year Guarantee

Catalog shows both complete Gates and just the Steels, at prices you can't afford to miss. Send for my new catalog with free 30 days' trial and *freight prepaid offer.*

L. L. MAY & CO. SAINT PAUL MINNESOTA

Easiest to Erect

and

STAYS Erect LONGEST

Apex Fence is easy to put up because it *fits* any kind of ground, rolling, hilly or level. Up and down it swings, whichever way Nature has molded the soil. And it does it without binding, buckling, or straining at the joints—without sagging, bagging or snapping. The stay wires clasp the line wires firmly—yet the line wires swing freely with the ground. No *other* fence has the patented swinging joint but that isn't the *only* reason why Apex Fence is better.

Here Are Some Other Good Reasons

Apex Fence is made of genuine Open Hearth Steel. *Open Hearth* Steel has practically *all impurities burned or worked out.* It *naturally resists rust longer.* No expense has been spared to make the *galvanizing* of the Apex wire the *heaviest and most durable* possible in this day of factory chemists and manufacturing efficiency. Owners of Apex Fence all say it's the best fence bargain they ever got.

Don't Buy Till You Get All the Facts

Just tell us about how much fence and what heights you'll be needing, and when you expect to put it up. Then we'll send you our free booklet and important fence facts and a mighty interesting proposition. We may have an Apex dealer near you where you can see the fence. In any case, we will have you supplied with fence promptly at the right price. Write today. Postal will do.

WITH THE EDITOR.

The National Eugenics Society was organized week before last at the National Western Stock Show held at Denver, by electing Mrs. Mary T. Watts, Audubon, Iowa, president; Mrs. Mary Elizabeth Bates, Denver, Colo., vice-president, and O. M. Plummer, Portland, Ore., secretary. The society is the direct outgrowth of the babies' health contests which have been held with marked success at the state fairs of Iowa, Missouri and Oregon for the past two years and which have aroused widespread interest and the science of breeding children with as much care as has long been exercised in the breeding of live stock.

In a personal letter Mrs. Watts, president of the new society, declares:

"I begin to feel as if I were the center of a whirlwind that bids fair to take me off my feet." This declaration was brought about by reason of the large number of babies' health contests which are planned for the future, included in the list of contests are the 1913 state fairs of Iowa, Missouri and Oregon, with every prospect of similar competitions at the state fairs of Ohio, Massachusetts and Michigan. Contests have already been held at the Milwaukee Household Exhibit; at the reunion of Neighborhood Clubs, at Fargo, N. D., and at a dozen or more county and district fairs and Chautauqua assemblies.

The underlying idea is for the awarding of prizes to babies who show the best physical development, rather than the most beauty. The good effects of the contests are shown by the fact that at the 1912 Iowa State Fair a farm mother won one of the best awards on a child entry which had been rejected at the 1911 state fair because of inferior physical development, the mother having spent the intervening year in rearing and feeding her child along the scientific lines outlined by the efficient women who are at the head of this eugenics movement.

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

Let nothing disturb thee,
Nothing affright thee;
All things are passing,
God never changeth.
—Santa Teresa's Book Mark.

Out of the shadows of night
The world rolls into light;
It is daybreak everywhere.
—The Bells of San Blas.

A firm faith is the best divinity; a good life is the best philosophy; a clear conscience is the best law; honesty is the best policy, and temperance the best physic.

Some people are always grumbling; if they had been born in the Garden of Eden they would have found much to complain of. Others are happy anywhere; they see beauties and blessings all around them.

Everything we endure patiently is a key to something beautiful we could never enter otherwise. By the toilsome road of study a scholar learns to get joy out of books and stones and trees. By the hard road of discipline a man learns to get joy out of everyday living.

If we all shaped our lives day by day upon the maxim, "Strive to make one heart happy," jealousy, revenge, hate, with their kindred evil associates, would be banished forever from the earth. Our minds would be so occupied in adding to the pleasures of others that there would be no room for discord.

MOTHER AND DAUGHTER.

The time to begin to win your daughter's confidence is when she is a wee little maid, a bundle of sweetness and naughtiness—a small being, all "mixed with angel instincts." She should learn that her mother is a just judge, but that she is no less a tender counselor.

Then when she grows to young womanhood she will not set aside lightly the opinion of the mother upon whom she has learned to depend. When she is advised to wait she will not rebel, for she will know that there is no unreasonableness in the judgments of one who has never decided wilfully against the daughter of her heart.

A HELP FOR EMERGENCIES.

If you have no emergency drawer, shelf or cabinet in your home, arrange to have one when you begin housecleaning this spring.

Accidents will not occur any oftener if you are prepared to meet them.

When looking over your supply of linen set aside old sheets, pillow cases and towels, tablecloths, napkins, handkerchiefs, etc. Cut off buttons and hems, boil the linen in strong borax water to sterilize it, and press it. Separate the large pieces of cotton or linen from the smaller pieces, making two or more piles. Have some perfectly clean bags (flour bags, etc.) and into these place your separated piles, tie them up and mark them plainly before laying them in the clean drawer.

Flannel or outing cloth pieces from underwear are invaluable prepared in the same careful way, to be used for compresses or hot fomentations.

You may like to place in the drawer some cheesecloth for mustard plasters and other things to meet your own special conditions, such as absorbent cotton, adhesive plaster, gauze, etc.

FOR THE COOK.

Potato Biscuit.—Wash and boil four medium-sized sweet potatoes and mash. Stir into a batter made of one pint of corn meal, one teacupful of buttermilk, two tablespoonfuls of melted lard, one level teaspoonful of salt and the same of soda sifted and beaten into the batter just before stirring in the potatoes. Mold and bake until a rich brown.

Yorkshire Sausage.—Put some good plump sausages, or slices of sausage meat, in a large dripping pan and pour over them a batter made as follows: Two cupfuls of flour, one teaspoonful of salt, three well-beaten eggs and two cupfuls of milk; mix well and pour over the sausage in the dripping pan and bake in a hot oven for thirty minutes.

Doughnuts.—Two cupfuls of mashed potatoes (hot), four tablespoonfuls of shortening, three cupfuls of sugar, four eggs, five teaspoonfuls of baking powder, three cupfuls of milk, salt, nutmeg and last, flour enough to stiffen. Make a cream of potatoes, shortening, sugar and eggs, then add milk, salt and nutmeg, flour sifted with baking powder, and cook in boiling lard, and they are fine.

Apple Meringue.—Slice any kind of stale cake; put the slices in a baking dish; pour a little milk over; pare and core four or five apples; cover the cake with the sliced apples; sprinkle cinnamon or a little grated nutmeg over and a half cupful of granulated

sugar; put the dish in a quick oven and when the apples are tender make a meringue.

AMONG OURSELVES.

Really wonderful is this winter weather where I am now staying. I hope it is so with you; I hope that you are enjoying it. How the glorious moon has called to my mind that grand hymn of Addison:

Soon as the evening shades prevail,
The moon takes up the wondrous tale,
And nightly to the listening earth,
Repeats the story of her birth.

God loves the beautiful. He is the source of all beauty. How lavish to the eye, the touch, the smell, hath He strewn the beautiful things of nature, and there is another world of beauty in which we may dwell, a world where the sense of the mind, the heart, the soul, may be entranced with the beauties which He hath created. Are you more able than yesteryear to catch the golden glint of the unselfish consideration that has been shining in a neighbor's life? Can you better sense the courtesy and the gentleness that are gracing a well-ordered life on an adjoining farm? Can you better appreciate lovingness and sympathy and helpfulness—those gentle violets of character growing quietly in the silent places—and do you grasp to greater degree that faithfulness to

"Just as it Looked in the Book"

Have you ever experienced that moment of rapture, when having eagerly waited for the thing you wanted so much—you have it come to you just as thoroughly good and attractive as it had been represented?

Everything from Montgomery Ward & Co.'s Catalogue arrives "Just as it looked in the book."

It was this feature of our great Catalogue that James Montgomery Flagg, one of America's foremost artists, has shown in this message to you.

In graphic pen strokes Mr. Flagg tells the whole story as millions know it.

From the picture and description you can rely on getting every article you need; clothing and adornment, household necessities, food, furniture or luxuries, just as you expect to find them.

One thousand pages, abounding in rare bargains and unique offerings make up the Montgomery Ward & Co.'s Catalogue for 1913.

You need a copy in your home for economy and convenience. You cannot buy a book like it at any price, but we send it free for the asking.

Why not write a note today saying you would like to have one.

the round of common duties that leads even to self-sacrifice? What is beauty is a question which wise folk have discussed pro and con for ages without coming to any very satisfactory answer, but there are some who have learned that the chief value of material beauty lies in the fact that it is the shadow and symbol of something inexpressibly greater.

Evidently one of our men friends has been looking out on the beauties around him and also for the other deeper-lying glories. Charles Smith, who lives amid the beauties of Wisconsin's varied lands and climate, sends us this:

The golden sun has sunk in the West,
Dark shadows o'er me creep;
All nature seems to be at rest
And lost in silent sleep.

Before I join the sleeping throng,
My Lord, I come to Thee;
Forgive me all that I've done wrong,
From sin my soul set free.

Thou, Who Thy precious blood didst shed
For all the human race,
Send angels bright to guard my bed,
In dreams reveal Thy face.

And should I die before I wake,
To answer death's grim toll,
I pray Thee, Lord, me not forsake,
Have mercy on my soul.

Sin! That which mars moral beauty and which arouses in us that queer feeling of repugnance that we get when we look upon some disgusting object. When Mr. Smith wrote these verses, I wonder how many attempts he made before he succeeded! There were attempts and there were failures. The failures were not pleasing, yet by being persisted in they led to success, to beauty. Our little everyday struggles, our past victories, our past failures what do they matter to us, to others? More possibly than we can tell, because the little details of our lives reach very intensely into the lives of others. A failure is more or less humiliating, but if one analyzes the causes of one's failures it may be possible to find that in at least some instances one has moral triumphs to one's credit.

And this brings me to place before you a letter in which Cousin Clara raises a question of the greatest importance. It is a question that has a universal basis with always a local or personal application. It involves moral as well as legal rights of the individual and of a large and highly important proportion of the population. Certain of us see the answer clearly, some of us not so clearly, and others not at all. We women have discussed this question "Among Ourselves," and in all sorts of ways and places. Cousin Clara is evidently stirred up by some special case of which she knows; hear her:

It is quite a number of years since I took part in the chats "Among Ourselves," but there is something I should like to ask and which I should like very much to hear discussed by the men. Is it fair and just to a farmer's wife, after saving to the very best of her ability and working as hard as her strength will permit—oftentimes greatly overtaxing her strength—to be compelled to ask her husband for every dollar she needs to spend for herself and family and the household in general? When she does gather up courage and ask, is it right for him to say, "How much do you want; what do you want it for; where is that $5 I gave you two months ago?" Is it anything less than a beggar's life? Would a man like to exchange places with her? When a farmer's wife takes all the care of the chickens—in the winter, too—aside from all the housework, keeps the table well supplied with eggs and chickens and takes all the surplus eggs to the store to be applied on the grocery bill; when she, I ask, sells chickens, who should have the money? Is it more than her right to feel that the money is hers, to be used for herself and family as she sees fit? Is a man who will put this chicken money into his pocket and refuse to give it to his wife, who has worked hard to raise them, and then keep himself well supplied with tobacco and cigars, a man in the sight of God? Please let us hear from the men, for we know what the women think.

We will wait as patiently as we may for the replies I am sure our men writers will send in. I feel like offering a prize for the articles that attack this subject from a business, a moral, a social, or an individual standpoint, showing how to reach an individual through his sense of fairness, honor, justice, and even better, selfishness, but I hardly think prizes are necessary. Perhaps we have a lawyer reader who will take this up from the basis of a contract between the parties.

There are connected with our paper a number of readers who are life subscribers. One of these and a good friend of the "Home Department" is R. A. Dague, with whom I hope to have you get better acquainted some of these days. You will like what he has to say about the value of pets:

I am thoroughly convinced that every child should have pets to care for, for a number of reasons. One is that it teaches him to be responsible for something. Another reason, is to love a dog, or cat, or any living thing exerts a good influence on the boy or girl. It develops and strengthens the tender feelings of the child's nature and helps to eliminate cruelty and selfishness. Pets will give them something to enjoy at home and they will be less inclined to go off with undesirable companions. It will help them to form habits of industry and method and strengthens the memory. A boy's love for his pets fills his mind with useful and good thoughts and he has less time for bad thoughts. While teaching his pet dog, or cat, or bird, or horse, he is himself learning patience and self-reliance and is exercising his intellectual faculties. Every father and mother should, if in their power, provide their children with living pets of some sort, if not a dog, or cat, or horse, then get them birds or chickens, or ducks, or lambs, or pigs, or something.

The above is said to parents especially, but it is meant for our young folks also. Get pets; be good to them, love them, and that will lead you to be good to and love your fellow beings. A religion of kindness is the best of all religions.

Of course, we'll all pet the baby and even cuddle him. No need to give any hints there—a word of warning indeed is perhaps needed. Let him sleep in a cold room and it will be good for him if you care for him as Mrs. Bellevue suggests:

I have never written anything for

You insure against fire—Why not against decay?

There is a small chance that your buildings will be burned, but there is an absolute certainty that they will decay if you neglect to keep them well protected by good paint.

Protection depends upon the character of the paint you use. Some paint permits moisture to go through to the wood, which starts decay and soon ruins the building. The paint that gives complete protection is

Lowe Brothers High Standard LIQUID·PAINT

It adheres tightly and sets in a tough, durable coat that resists moisture and wears for years. It is the one paint that years of outdoor tests have proved will insure greatest protection of your buildings.

Ask your local, "High Standard" dealer-agent to give you **Paint Information** and color combinations for exteriors, interior walls, floors, woodwork, etc.

the Home Department before, but as I greatly enjoy reading it, I thought I would add my share. I have nine children, the youngest four months old, so will tell the mother who wishes to know how to dress her five-months-old baby for bed, who must sleep in a cold room, that if baby has flannelette night gowns of quite heavy flannelette it will need little else, especially if blankets are used. Woolen blankets are much warmer than cotton, but either is good. Wrap baby in a woolen shawl or piece of old bed blanket till bed is warm. It might be well to put a flannel hood on its head, as few babies have enough hair to keep their head warm. Never allow a baby to sweat if possible, as they catch cold easily when too warm; it also will weaken them.

There is many and many a one who knows the great value of a nightcap—not the kind you take, but the kind you wear. In Europe and in many parts of our country it is a sensible custom. But with all precautions taken it is necessary to be constantly watchful for changes of temperature.

Another addition to our home doctor's book comes from Aunt Agnes. It may happen that one of your own or a neighbor's child will be taken with convulsions and you may need to know how to proceed. Women are apt to be greatly frightened by the sight of a child in such a condition. Control yourself is the first thing to do, then proceed as Aunt Agnes tells:

Heat enough water at once and undress the child and immerse it in milk-warm water and gradually add more warm water. Wrap the head and neck in a towel wrung out of cold water. Rub the throat with a few drops of turpentine. In case of worms follow with a mild purgative and a few doses of worm medicine. The hot water will relax the muscles almost immediately. Rub the child thoroughly dry and to get a good circulation of blood wrap it in warm blankets and it will sleep a natural sleep, and this will be all the treatment needed. If necessary, repeat this treatment. This simple treatment has saved thousands of babies' and growing children's lives.

We will now hear from our cooks who have been patient while we talked in the parlor and visited in the nursery. They reply to calls for assistance from other housewives. Tomatoes, and lard, and dried fruit, and a pumpkin pie of an unusual kind are served by them. Remember your scrap books:

I am a young woman, the mother of a ten-months-old boy. He is a healthy little fellow, is thirty-three inches tall and weighs twenty-five pounds. He can creep everywhere and stands alone. My husband is a brakeman on the Pennsylvania railroad and, as he is away from home most of the time, I live with my parents on the farm and that is how I have the privilege of reading the Home Department. I have always lived on the farm and am interested in other farm ladies' talks.

I have been reading the home page and would like to be a member, that I might write as well as read. I love to help all I can in every way I can and enjoy reading the thoughts of other people and always glad to learn more about cooking and new and easier ways of performing the daily household tasks. I think it is real sisterly for women to exchange their "best" ideas. That way the good may grow, thus crowding out the evil. I was very thankful for the item about "Bulletin Evenings." I will send for a few of the bulletins, but have not quite decided which ones I really need the most. I will write a recipe for grape catsup. Select firm, well-ripened grapes (parts of spoiled grapes will cause the catsup to sour), wash and slice, allow them to boil rapidly for thirty minutes, then strain through a sieve, being careful to take out all the seeds, as they are bitter. To each quart of juice add one-half a pint of vinegar, one cupful of sugar, one medium-sized onion, one teaspoonful each of ground black pepper, red pepper, cinnamon, cloves, alspice, mace, ginger, salt and mixed spices, tie the spices, salt and pepper in a thin white cloth and drop the onion whole into the juice. Let this mixture boil until it is as thick as bought catsup, then bottle it, being careful to get the stoppers in tight, for if any air gets to the catsup it will be spoiled.

Mrs. Ellen.

As I have been a silent reader and admirer of the Home Department of this paper for so long, I will try to give my mite in return for so much benefit received. Will say to the sister who asked for remedy for spoiled lard in the issue of January 9th, I, too, was troubled the same way with my lard and found it was caused from covering lard while warm with tight lid, which created steam and same gathered on lid and dropped on the partly cooled lard, which makes brown streaks and a musty smell. If the sister who is troubled with worms in dried fruit will heat fruit hot in the oven as soon as it comes from the drying table and sprinkle lightly with salt she will have no more trouble. I would like to hear from the sisters who have school lunches to put up, as I have six every day. If this misses the waste basket I will come again.

I. M. D.

If the sister will put her fruit in the oven after it is dried and heat it as hot as she can bear her hand in it, then put it in a flour sack and drop it in a tin milk can with a good tight cover or a tin lard can with cover I think she will have no bother with worms. I always use an old milk can. I drop the sack in the can and as I dry the fruit I put it in the sack while still hot and twist the top of the sack tight. After the can is full I lay a thin cloth over the can and press lid on tight. Be sure that you put lid on tight each time that you take any fruit out and do not leave lid off only while you are getting fruit out.

Mrs. Topeka.

PUMPKIN PIES WITHOUT EGGS.

Two cupfuls of stewed pumpkin, one-half cupful of creamy milk, one-half cupful of sugar, one tablespoonful of corn meal. I really prefer the corn meal pie to one made with the usual egg in it.

A. Bocker.

Next week we will give our time and attention to the preparation of our strawberry beds for the coming season. It will be here before some of us are right ready! So we shall have the articles written for the strawberry contest and the winners will get their prizes in due order. Our Oklahoma and southern Missouri as well as Arkansas readers will perhaps think these are a little late, but our north latitude friends will wonder why we are so early. Then the letters may be just in the proper time for the man on the middle ground. Have you sent to Washington or to your state agricultural college for those bulletins I spoke of? If not, do so right now. It is not necessary to address any one by name. Ask for pamphlets on the subjects you are interested in. We ought to have good discussions on a number of these topics later on when we have thoroughly informed ourselves on our favorite topics. You are entitled to a fair share in the information acquired by these parts of our government, and it is the duty of each of us to get the latest and most reliable information to be had on any necessary subject.

Test Your Dairy Salt

The salt you use in butter-making should not be bitter. Test it thus:

Make a little salt brine from the salt you are using and taste it. If it leaves a bitter flavor in your mouth, change your brand.

Worcester Salt leaves no bitter taste.

That's why it's best for butter.

WORCESTER SALT

The Salt with a Savor

Worcester Salt is also best for both cooking and on the table. Its grain is fine and even.

For farm and dairy use, Worcester Salt is put up in 28 and 56-pound bags. The bags are made of the best quality Irish linen. Get a bag from your grocer.

Send us your dealer's name and address and we will mail you free of charge, our booklet "Butter-making on the Farm." Contains many valuable hints for dairymen.

WORCESTER SALT COMPANY

Largest Producers of High-Grade Salt In the World

NEW YORK

Use it 10 Weeks FREE

Difference In Cash Income For Butter and Cream Will Pay for the Cost of A KING in a Single Season.

Sent Without a Penny In Advance

Four Sizes. Capacity up to 800 lbs. per hour.

NO MONEY DOWN Your Own Time To Pay

We don't want you to send a penny, make any deposit or obligate yourself in any way. Simply try a KING Sanitary Separator in your own home or dairy for TEN WEEKS FREE, just as if you owned it, test it with warm or cold milk and if it doesn't separate all the cream right down to the very last drop, in finer condition and do it easier than any other Separator on the market, bar none, then return it, AT OUR EXPENSE, the trial costs you nothing.

No Other Separator Stands This Test

We challenge any manufacturer, no matter what Separator he makes, to duplicate our offer. If we did not know that you were honest, we were honest and the Separator was honest we would not dare make such a remarkable offer, but as it is neither one of us has anything to lose. The separator must sell itself by its work.

We know as well as you do that if the KING failed to make good our every claim, that if there was a single flaw or one unsatisfactory feature about it, you wouldn't keep it—and we couldn't continue such tests. The Separator which will stand up under this test—which carries with it a life-long guarantee must be right.

Make Your Own Payment Terms

Why should you be asked to take a risk of any sort? You are not asked to put your hard earned money in a KING until it makes good. That's why we say "Pay for a KING while it works for you—make your own terms—pay cash; or monthly or after harvest." When you deal with us we take all the risk willingly—and we are able to do it. The KING Separator, cannot be equalled—we back it with our $1,000,000 factory.

Rock Bottom Wholesale Factory Prices

Our **Direct-from-maker-to-user** selling plan absolutely wipes out all the added "in-between" expense of a chain of useless middlemen and enables you to buy a KING as cheaply as the largest jobber could buy them by the train-load—if we sold them that way.

$24.95 KING Sanitary Cream Separator

It is Made on the only Correct Principle. Honest Quality, Expert Workmanship and Price, make it the Best Your Money Can Buy.

The KING skims warm or cold milk more thoroughly and easier than any separator made, **regardless of price.** Positively never defeated in a skimming test. Strong, durable, runs very freely, has all latest improvements including our improved separable disc bowl. Simplest machine to clean, all parts readily accessible. No nooks or corners to gather or hold dirt. Farmers everywhere recognize that the KING is the identical same type separator for which almost double the price is being asked.

Cleanest, Simplest, Most Efficient—Absolutely Sanitary

The KING Sanitary Separator in all sizes costs you only one-half as much as agent's machines. Buying direct from our factory saves you all the expense of the agents, salesmen, stores, wagons, etc. To prove our claims we make the **most liberal offer ever heard of.**

LIFE-LONG GUARANTEE

Should any part of the KING Separator prove defective in material or workmanship during the entire life of the machine, we'll replace it with a new and perfect part absolutely free of all cost to you and to prepay all express charges. **Our Million-Dollar-Factory Stands Back of Every KING Separator.**

Can you think of a single reason why you should not have a KING Sanitary Separator when we prove to you that we are the only separator makers having confidence in his machine to send it right on to you without any red tape for a **10 weeks' Free Trial—and then give you a life-long guarantee of satisfaction.**

Send For Free Catalog Today

If you want the best separator ever made at the lowest price and easiest terms of payment ever heard of—ask us to send you a KING for **10 Weeks' Free Trial,** at our risk, without you paying even one cent down—no money in advance, or send your name and address for Descriptive Free Catalog and strongest proof ever presented—Get all the facts before you buy. This is the fairest, squarest, most liberal separator offer you ever saw—and quickly sells our entire output each season. *Send Postal Today, Sure.*

King Separator Works, 258 Rano St., Buffalo, N.Y.

The Fence That STANDS Tight and Trim The Whole Year Round

(15)

—and Why

Every farmer knows that a fence which will stay tight and trim through summer and winter must be built to give and take. It must be made of tough, springy wire, and in such a way that in contracting and expanding it will take up as much as it gives out.

There are several reasons why

"Square Deal" Fence

Stays Tight and Trim the Year 'Round

FIRST: Note that the strand wires are wavy. This gives the fence ***elasticity***—its give and take—***keeps it tight*** summer and winter.

SECOND: The Stay Wires are ***one-piece*** from the top wire to bottom one, forming the backbone of the fence, which stiffen and support it, absolutely preventing sagging and bagging.

THIRD: Note the ***SQUARE DEAL LOCK*** which double-grips the wires so tightly they cannot possibly slip. It is one of the most important parts of a wire fence.

We use the toughest, strongest wire—draw it, galvanize it, anneal it in our own mills; then weave it into Square Deal Fence and back it with our own guarantee. We know how it is made—the kind of material that's in it—and consequently stand back of it with our Square Deal Guarantee, which insures every purchaser a Square Deal and perfect satisfaction.

Write for Catalog, Prices and Free 2-Foot Folding Rule

We want you to know more about this "honor built" fence. Our catalog tells the complete story. If you will write for a copy we will send you a Four-Section 2-Foot Rule FREE. Send today before they are all gone.

THE YOUNG FOLKS

Letters and Articles for this Department Should be Addressed to
Aunt Mary, Hawley, Minnesota.

GEMS OF POETRY.

The world is full of a number of things;
I am sure we should all be as happy as kings.
—Selected by Gwen.

Earth has put on her coat of snow;
Children's faces are all aglow;
Snowflakes are dancing around, around,
Then sinking so softly upon the ground.
God made the winter for everyone,
So let us enjoy it, in shade or sun.
—Magnolia, age 16.

OUR FIRST SNOW.

It came flying down in flaky heaps,
Falling on housetops and in the streets;
Making everything pretty and white,
Hiding the stars that peep out at night.
Some were little and some were big;
Some came dancing a merry jig;
Some came down like honey bees;
Some fell on walnut and evergreen trees.

It fell on the fields and made them white,
And tried to hide the sun from sight;
But that came out in a little while
And gazed on the scene with a happy smile.

For what did it see on the white-clad ground
But a large snow man resembling a clown!
And children were hiding behind stone walls,
Waiting a chance to throw snowballs.

Then the sun went down, and fast came night,
When the stars' eyes laughed at the pretty sight;
And the moon came out with face aglow,
To celebrate our first snow.
—Marion, Okla., age 12.

These young people won their places here by sending Aunt Mary good, original letters, stories, verses and puzzles, written on but one side, and fully signed. (Name, age, address and pen name should be given.)

Those who miss the roll this week are as follows: Rosy Cheeks, memory gem; Housekeeper, age 8, and Red Rose, age 12, no addresses (these pen names are already taken, girls); Flo and Nancy, food recipes; Iowa Blush and Lucie Stalter, not of general interest.

TRY THIS, GIRLS.

Apple Sauce Cake.—One cupful of light brown sugar, one-half cupful of butter, one and one-third cupfuls of apple sauce, one and one-half teaspoonfuls of soda dissolved in the sauce, one cupful of chopped raisins, one-half cupful of chopped nuts, one teaspoonful of cinnamon, one teaspoonful of cloves, two and two-thirds cupfuls of flour. Baked in a loaf requires one hour, layers, forty minutes.—Flo.

ANSWERS TO LAST WEEK'S PUZZLES.

I. Squash, tomato, cabbage, peas, gourd, turnip, lettuce, spinach, potato, carrot, celery, beans, pie plant, egg plant, radish, watermelon, muskmelon, garlic, beet, cucumber, horseradish, pumpkin, leek, sweet potato, onion, parsnip, corn, popcorn, yams, peanuts, parsley, Brussels sprouts, kale, oyster plant.

II. Cold, only, land, oral, ripe, able, door, oval; Colorado.

III. Tokyo, Tripoli, Bogota, London, Reykjavik, Lima, Cetinje, Paramaribo, Brussels, Lisbon.

A LINCOLN STORY.

When Abraham Lincoln was a small boy going to school his hands were so dirty. Day after day passed and he didn't wash them, until one day his teacher told him if he didn't wash them in the morning she would punish him.

He never thought anything more about it until the next morning, as he was going to school he remembered what she had said. It was too late to go back home and wash them, so he spit on one of his hands.

When he got to school the teacher asked to see his hands. He held out the one he spit on because it was the cleaner.

The teacher looked at it a minute, and said, "Abraham, if you can find a dirtier hand in school I won't punish you." He held out the other one, and she didn't punish him!—Red Wing, age 12.

Better Than Gold.

Brother Bob was away at college. Father was poor and could just scrape money enough to pay for his education. On the fifth of February, father said that he would fall short three dollars in paying the last month's fuel bill. When the twelfth came we all knew better than to ask father for any money for valentines, as we knew he didn't have it.

Bessie was red-eyed all the time, nearly. She wanted to send a valentine to Bob the worst way. Of course, we all wanted to send him one, but we knew (at least we thought we did) that we couldn't. Bessie was the youngest, twelve years old, and seemed to take it the hardest.

The next day Bessie went down to the grocer's. She came back with a large piece of thick, red paper. I went up to her room with her. She took the scissors and cut out a large heart. Then she made some flour and water paste. She went out in the barn with the paste, heart and scissors. First she cut some hair from the neck of the cow, Spottie. She pasted that on one side of the heart. She did the same with the calf, the horse and the pig. Then she did the same to one of the old hens, the rabbits, the squirrel, and even pasted a piece of lettuce on. Then she wrote in the middle, "With love from Bessie."

When she showed it to me and told me about it, I wrote on the other side, "And the family." I carried in cabbages for Deacon Turner and earned ten cents, and used some of it to send the precious valentine. Bob said, "That valentine is better to me than gold."—Badger Boy.

Short Talks.

Gwen has twin calves named Austin and Texas.

We cannot spare space, Peony, for requests for correspondents.

Peggy is planning to raise tomatoes this summer, she likes them so well.

Ted likes to crochet and embroider. The girls take their fancy work to school.

At Garda's school they are going to decorate in red, white and blue for Washington's birthday.

Wilna reports that her pansy pin went through the wash by mistake, and came out unharmed.

Thora tells of the destruction of their schoolhouse by fire early in January. Fortunately no one was hurt.

E. E. B. likes to sew and cook, and thinks all girls should learn how, as it will surely be of use to them some day.

Iowa Maiden is a hero worshiper, but regrets she has never met a hero or heroine yet. She is hoping to become a nurse.

Country Maid says her teacher bought a doll for the school girls to dress. They voted on a name, and the name Evelyn Naomi was chosen.

Valeria wants to know whether cabbages will grow better in a patch or in rows. They will grow all right either way if they are cultivated and are not set too closely together.

Wilna sent a motto: "Never put off till tomorrow what you can do today." Pretty Poll contributes a quotation: "Truth is the foundation of all knowledge and the cement of all society."

Truda's father is not only generous, but fond of music, for he bought an organ for the girls, a good violin for her brother, and a smaller one for Truda. In return, the young folks help cheerfully with the work.

Some new riddles (to Aunt Mary) are these, sent by Happy Brown-eyed Maiden: Why is a sick Jew like a diamond? Because he is a Jew ill, (jewel). Why are weary people like auto wheels? Because they are tired. What is bookkeeping? Forgetting to return a borrowed volume.

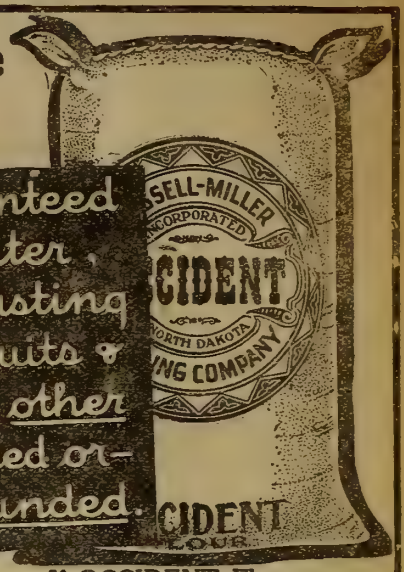
This Guarantee is for You



Every Sack Guaranteed to give you whiter, lighter, better-tasting Bread, Cake, Biscuits & Pastry than any other flour you ever used or—Your Money Refunded.

We know OCCIDENT will make good in your kitchen.

It is a serious matter to put an unconditional money-back guarantee in every sack of flour.

If OCCIDENT Flour were like other flours we could not make such a guarantee. But OCCIDENT is different.

Won't you test one sack on our Money Back Guarantee?

The Guaranteed Flour

OCCIDENT

OCCIDENT Flour is made exclusively from First Choice of the most valuable bread wheats grown. The OCCIDENT way of washing and scouring the wheat and purifying the flour by wonderful modern machinery is the most thorough and costly in use in all the world.

Because of this extra quality and cleanliness OCCIDENT makes better bread and more loaves to every sack than any other flour.

Costs More—Worth It

OCCIDENT costs you only a few cents more than other flour, but it is the most economical flour you can bake with. The bread keeps moist, sweet and fresh longer than other bread. This saves work and fuel, for you can bake a double batch at a time and bake less often. It is very easy to prove this and we pay for the flour if you're not satisfied.

Send for Our Free Booklet, "Better Baking."

The International Sunday School Lesson

FIRST QUARTER. LESSON VI. GEN. VIII. 1-9; 17 February 9, 1913

GOD'S COVENANT WITH NOAH.—THE STORY.

Noah's faith shines resplendent upon the rayless irreligion of his day. He showed his faith by his stupendous work. On dry land and far from sea he built his colossal ship. He preached righteousness to the gaping and gibing crowd which curiosity brought from afar to his shipyard. He was persistent. He kept right on building and preaching for 120 years. He built precisely according to the model shown him. He gathered in the supply of food for man and beast requisite for his long voyage. He selected and admitted the beasts and fowl as God directed. With seven souls he entered his strange prison, had its doors shut behind him by the Invisible Hand, and tarried in his weird environment undaunted, though seven days passed before the first raindrop pattered upon the roof. Sublime faith, that! The "log-book" of that unparalleled voyage is very brief. It takes only twenty-seven verses to narrate the novel and thrilling experience of 365 days. Much riches are in little room. Imagination must be trusted to uncover them. As Noah at length emerged from the ark, an inexpressibly sad and orphaned feeling must have affected his generous heart. Earth's desolation, how utter! In vain he listens for the sound of a human footfall. Not even a footprint is left. He finds relief in worship. He builds an altar on the dripping rocks of Ararat. Again his faith exemplifies itself. He had saved only a few specimens of clean animals; but he prepared to offer some of them, with assurance that God would supply their places and see that the species did not become extinct. When the fragrance of that whole burnt offering came up before the Lord, he knew that Noah intended it should signify the complete devotion of himself, his descendants, and the renewed earth, to God. As a pitying Father, God graciously responded to the suppliant patriarch, allaying his fears with the assurance that the cataclysm just passed should never be repeated; the beneficent regularity of the season should know no interruption; human life should have a safeguard. God delegates his judicial power to man to this end. The first principle of human government is here irradiated in the statute, "Whoso sheddeth man's blood, by man shall his blood be shed." The Noachian covenant was now ready for its seal. God took the very substance which had destroyed the earth, and transmuted it into a royal signet to attest his promise never again to whelm the race. There it stood in all the dazzling splendor of its prismatic colors—a arrowless bow, bent toward heaven, the very vastness of its sweep signifying the "wideness of God's mercy." To all generations the ineffable and assuring words which first fell upon Noah's ears have resounded, "This is the token of the covenant."

The Teacher's Lantern.

The rocks bear their incontrovertible testimony to the possibility and reality of such a flood as Genesis describes. Huxley in his Lay Sermon, dismissed. For example: (1) The No. IX, graphically describes such a cataclysm. M. Figuier affirms that the Asiatic Deluge occurred after the appearance of man. A vulgar infidelity has had its laugh at Noah and his ark; but he laughs best who laughs last. Corresponding to the testimony of the rocks is the testimony of tradition. Humboldt says that ancient traditions of the flood are dispersed over the whole surface of the globe like relics of a vast shipwreck. Most remarkable of these is probably the Chaldean account translated from a clay tablet 2,500 years old, by the curator of the British Museum. In it appears all the main facts connected with the deluge and the saving of Noah and his family, rainbow did not first appear after the flood. God took what was always a phenomenon of nature and gave it a new significance. (2) The dimensions of the ark were probably 547 feet by ninety-one feet two inches and forty-seven feet two inches. That a craft of such dimensions would float and be remarkably capacious has been demonstrated by actual experiment. (3) One hundred and twenty years' respite before the flood was not too long a period, when the length of antediluvian life is considered. Nine years would be the corresponding ratio in the life of today. (4) Though there was no opportunity to save the physical life after the door of the ark was shut, yet time for repentance and salvation remained. Multitudes that would otherwise have remained obdurate may have repented. So the black cloud has its silver lining. The spiritual analogy should be reserved to the last. Earth will never be destroyed again by water, but it will be consumed by fire. The wrath of God already burns upon it. There is no escape. But an ark is afloat, it is ample; it is accessible. It affords absolute security. That ark is the atonement. Jesus cries: "I am the Door!" Escape for thy life!

EVERY FARMER
Needs This Book

IT will be sent, on request, to any farmer who states the size and location of his farm, and about how many acres on it need stumping, boulder blasting, drainage, ditching, breaking up hardpan or tree planting.

Big Ben

Use Big Ben All Day Long

Big Ben not only gets you up on time every morning, but he serves the whole family all day long as a reliable clock to tell the right time by.

He's really two good clocks in one—a crackerjack of a time-keeper—a crackerjack of an alarm.

He can ring you up in the morning just when you want, and either way you want—five straight minutes or every other half minute for all of ten minutes.

If you're a light sleeper, turn on the half minute taps before you go to bed. If you sleep heavily, set the five-minute call and you can slumber then without the get-up worry on your mind.

Then when you're up and doing, carry Big Ben downstairs into the living room so that the whole family can use him to tell the right time by. He stands seven inches tall and his great big open face can be seen distinctly across the largest room.

Big Ben is triple nickel-plated and wears an inner vest of steel that insures him for life. His big, bold figures and hands are easy to read in the dim morning light. His large, comfortable keys almost wind themselves. He rings five minutes steadily or ten intermittently. If he is oiled every other year, there is no telling how long he will last.

He's sold by 18,000 watchmakers. His price is $2.50 anywhere in the States, $3 anywhere in Canada. If you can't find him at your jeweler's, a money order mailed to *Westclox, La Salle, Illinois*, will send him anywhere you say, express charges prepaid.

$1,000,000.00 Saved on Houses and Barns!

FREE BOOK Tells HOW

This book saves the home builders of America $1,000,000.00 a year! If you are going to build a house or barn, or do any repair work, you can't make money faster and easier than by writing for the great Gordon-Van Tine Millwork and Building Material Catalog. Offers 5,000 bargains in everything you need to build, remodel or repair.

Save $500 to $1,500 on a New House

Yes, sir! We can save you $500 to $1,500 on the cost of material for a fine new home. Doors, 77c up. Plain and fancy windows, 57c up. All prices cut to the quick.

We Ship Goods Promptly, Guarantee Satisfaction

We are the oldest and largest building material concern selling direct to consumers. Three big banks behind our guarantee.

WRITE! Get the Great 5,000 Bargain Millwork Catalog and Plan Book of Fifty Houses—both free. If you wish Plan Book, enclose 10 cents for postage and mailing. Write today. We will send them by return mail.

METHODS OF LEGUME INOCULATION.

The value of legumes as green manures or soil renovators is due to certain bacteria which develop nodules upon the roots of these plants and which have the power of rendering the free nitrogen of the air available for plant growth. Without these bacteria, legumes, like other crops, exhaust the soil of its combined nitrogen. In many regions certain types of these important bacteria are abundant in the soil; in other localities they must be imported, or, in other words, the leguminous crops to be grown there must be inoculated.

The inoculation of a new field may be secured either by the soil-transfer method or by use of pure cultures of the proper bacteria.

It is useless to attempt to benefit crops other than legumes by treatment with legume cultures. The only way by which a non-leguminous crop such as corn or cotton, can be benefited by the legume bacteria is either to grow an inoculated leguminous crop the previous year and turn under the stubble or even the entire crop as a green manurre, or to grow an inoculated leguminous crop between the rows of the crop which it is desired to benefit. No great increase in crop can be expected from the latter method.

Extensive experiments conducted by the bureau of plant industry of the department of agriculture, Washington, as well as experiments carried on by other investigators in this country and in Europe, have demonstrated conclusively that each species of legume may be inoculated more successfully by using the bacteria isola d from that species th a by using bacteria isolated from some other species. In other words, the red clover bacteria, which will produce a very successful inoculation when applied to a crop of red clover, will give little, if any, beneficial action when applied to cowpeas or soy beans, and vice versa.

The soil-transfer method consists in scattering over the new ground, at the rate of 200 or 300 pounds to the acre, soil either from a healthy old field of the same crop or from a new field of the same crop that shows abundance of nodules on the roots. To facilitate even scattering the inoculated soil should be thoroughly mixed with several times its weight of ordinary soil, and may be either drilled or broadcasted. If the soil is broadcasted it should be harrowed in immediately, and if possible this should be done toward evening or on a cloudy day, as bright sunshine is very harmful to the bacteria.

The method of inoculation by pure cultures depends to a certain extent upon the type of pure culture which may be used. Generally speaking, however, a bottle of pure culture of the proper kind of bacteria is opened shortly before the seed is to be planted and the culture mixed with the proper quantity of water and applied to the seed in such a way that all of the seed may be moistened, though not soaked. The seed should be planted as soon as practicable after this treatment; that is, as soon as it is sufficiently dry for convenient handling. Drying may be facilitated by adding dry, sifted earth, preferable from the field in which the leguminous crop is to be grown. It is undesirable to store inoculated seed, as the nodule bacteria often die out rapidly after the seed has been treated with the pure cultures and dried. Inoculated seed should never be dried in the sun. It is also possible to thoroughly mix the pure culture with a considerable quantity of soil, preferably from the field where the legume is to be sown. The treated soil can then be distributed in the same manner as when inoculating by the use of soil from an old field.

The advantages of the artificial cultures lie in the greater ease of their transportation and application as well as in the absence of the danger of introducing harmful weeds or plant diseases, although this method of inoculation, especially in the case of alfalfa, is less certain than the soil-transfer method previously described.

Attempts to secure inoculation either by the use of pure cultures or by the use of soil from old, well-inoculated fields will fail if the crop which is being experimented with is climatic conditions during the growing season are unfavorable.—[Dept. of Agr. Bulletin.

DIPHTHERITIC ROUP.

Mrs. E. M. Terwilliger, Leroy, Colo., is seriously alarmed about her poultry. She writes:

I am badly in need of help for my poultry. We built a new frame coop and sodded all sides. It is warm, but the earth is fresh and slightly damp. I have been putting in ashes to get a solid floor. Two south windows, one of them always left down five inches, as it is so warm in the coop. The flock is allowed to range in suitable weather and the coop is kept clean. I feed wheat, cooked and seasoned with salt and pepper. The trouble began with a cold, running at the nostrils, sneezing and throwing back their heads with a "squawk." Then there is a rattling in the throat, a cheesy matter is in evidence and some of them go blind. The other fowls pick at the affected fowls' eyes. Would that cause a normal eye to go blind?

No, it would not cause a normal eye to go blind, but the bird doing the picking would be the next afflicted. It was too bad to spoil what might have been a fine outcome by failure of the most important thing, fresh air, and a lot of it. Note this inquirer's diagnosis, it began with a cold and then developed into roup and now that is one of the worst infected flocks I have heard of yet. Diphtheria, or diphtheritic roup is a contagious germ disease and may be identified by the cheesy matter. If the throat is examined there will be found much redness and inflammation, with colored patches on the back part of the throat and palate. The spots increase rapidly in size and frequently run together. The membrane may grow rapidly, fill the mouth and throat to suffocation, or the poison may be carried into the air tubes, extend out into the bones and air sacks in various parts of the body and cause death by poisoning. To this latter fact is due many strange and mysterious deaths of fowls. In one part of her letter Mrs. Terwilliger asks: "Must I kill all afflicted birds? I hate to."

Of course, she hates to, and we poultry people who have been through every kind of poultry scrape imaginable know just how hard it is to kill off a flock of once promising fowls and see our anticipations go up into the air.

Those birds have been literally brought to their fate through mistaken kindness. If only that house had been made tight on three sides and the fourth wholly of canvas, or with large openings and canvas curtains to drop at night. After being kept in that soft, damp and warm atmosphere, it will be difficult to make necessary changes. The worst cases should be destroyed without delay and burned. As so many are affected, it would be better to remove the well birds, if there are any well ones, to dry quarters. The carbolic acid in drinking water is all right. Give to these chickens that are removed, Epsom salts, one teaspoonful to five fowls, fed in any soft feed, and an abundance of green feed. Do not scald the wheat, throw it in deep litter and let them get busy. Watch for any colds. If a snuffle is heard, dip the head in a solution of 50 per cent hydrogen, or kerosene will answer, to head off further trouble. I have recommended this treatment so often that it sounds monotonous, but I am not running on guesswork, neither theory, but actual experience, and have found this the best of all methods yet tried. All future hope is based on these chickens that are to be isolated from that stuffy, heated filthy condition, and it will require unremitting care to pull them through.

Now, about the diseased members and that house. In the end, extermination would be the better part. Then the house could be sprayed and disinfected, ready for future use. And always remember that it takes an awful lot of cold dry air to affect a normal chicken. Beware of drafts—a draft is when the wind comes in from one side, goes through the house and out at some other place. When a house is tight on three sides, this draft business is not possible.

THE "FLOUR CITY" CAN ALWAYS BE DEPENDED UPON

KINNARD-HAINES CO., Peterson, Ia., Jan. 13, 1913.

I AM more than pleased with the "Flour City" 30 H. P. tractor. I pulled a 36-52 separator with self-feeder, wagon loader and swinging stacker; threshed 77,000 bushels of grain in all conditions and had power to spare.

I traveled about 50 miles and pulled by separator over hills of 20 per cent grade and could have pulled four tons more. It can't be beat for pulling, is always ready to go, and I have only paid 80 cents for repairs during the threshing season. This is a true statement of what I have done with the "Flour City." Am satisfied I have the best tractor on the market.

Yours truly, HENRY TIGGES.

The 1913 "FLOUR CITY" has some new features; send for catalog No. 19.

INVESTING IN STUMP PULLERS.

Returns Are Not Slow in Coming and Justify the Original Expenditure by Returning Many Acres to Cultivation.

IN THIS day of high-priced land the dividing line between profit and loss depends upon the conservation of small things and the cultivation of waste places. Success or failure may be contingent upon the grain produced on strips of land which have all too long lain idle. Nothing is more important than that the farmer should make every ounce of energy and every foot of space return the largest rewards, to the end that his prosperity may not only be continued, but may be enhanced. The loss to the farmer from the non-cultivation of the fertile soil adjacent to stumps ("loafer land" is the name which the agricultural department gives to it) and to the robber hedge can hardly be computed, but it mounts high there is no denying. Every experienced farmer knows that he loses from four to ten rows of corn next to the hedge fence. A crop of hay, a stand of wheat, oats and other small grain are equally short from ten to twenty feet on each side of the hedge. With land in the grain belt worth anywhere from $50 to $200 per acre the day has passed when any farmer, no matter how prosperous, can longer afford to waste these rows on both sides of the hedge. Because of this the campaign to remove from the earth not only the stumps, but the hedge roots and return the land to cultivation is gaining momentum rapidly, with the result that crop yields in many states are being rapidly increased.

ANOTHER ONE OF THE EARTH'S MOLARS REMOVED TO MAKE WAY FOR CULTIVATION.

Nothing could more convincingly show the value of this work of stump and hedge pulling than this testimony of a grain-belt farmer:

A large stump twenty inches in diameter will waste as much land as is required for raising an average of eight hills of corn. The eight hills of corn would average one-half bushel. By removing the stumps and planting an average of eight hills of corn wherever there was a stump I increased my yield ten bushels to the acre, which at fifty cents per bushel was equal to $5 an acre. Besides, I planted and cultivated the eight hills of corn in much less time and with less work than I could work around the stump. On the thirty acres of stumps that I went over and pulled out I saved more than the price of the machine the first year, and I also greatly increased the value of my land, and my boys and myself did the work in a couple of weeks. I consider the time and labor wasted in plowing, planting and cultivating a crop of corn, or any other kind of crop, around a lot of stumps in a field in one season amounts to more than the cost of a good steel machine. When I cleared my land of stumps my increase of corn the first year more than paid for the machine and I consider the labor wasted in cultivating was equal to the time taken to pull the stumps, and the land is worth $50 per acre more, and the increased yield and labor saved is clear profit to me.

Another farmer writes:

I had two fields of the same quality of soil, one having been cultivated with the stumps standing in the field and the other having had the stumps removed with a stump puller. I gave them both the same attention and care; the corn on the cleared land made ninety bushels to the acre and the corn on the old land made thirty-five bushels to the acre. You will note that the cleared land produced about fifty-five bushels to the acre more and at sixty cents per bushel made a profit of about $33 per acre, and the ground was in shape to use riding plows and cultivators and enabled me to do the work easily and quickly.

Another grain-belt farmer, speaking of the profit to be derived more from ridding the farm of the heavy hedge roots than the stumps, says:

Twelve years ago I chopped off the tops of my hedges and laid them on the roots and tried to burn them. These hedges divided my farm into thirty-acre lots and even though it is twelve years since I tried to chop them out the roots are still in the ground and I can't plow across the line where the hedge fence was. That taught me a lesson. Don't try to chop or burn the hedge, leaving the roots in the ground. They never rot. A stump puller takes out every one slick and clean and leaves the land ready to plow across the old line. The two boys and myself are pulling from thirty to forty rods a day. We pull it and burn it right up as we go, making a clean job.

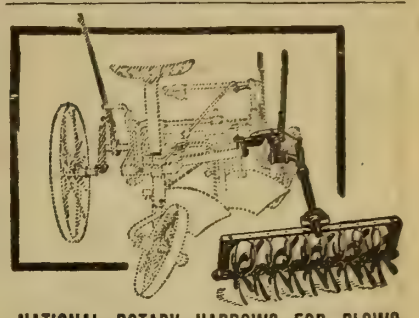
Such testimony is frequent and shows the wide extent of the use of the scientifically developed stump pullers of today and the large amount of land being returned to cultivation by their use. Farmers who do not have enough stumps of their own on their own farms to buy a puller are adopting the plan of going in with their neighbors and buying one together, thus lightening the cost on all. Then there are other farmers who are buying stump pullers and making a business of pulling stumps, doing the work by contract or by the day and thus making excellent money. One farmer contractor writes as follows regarding his experience:

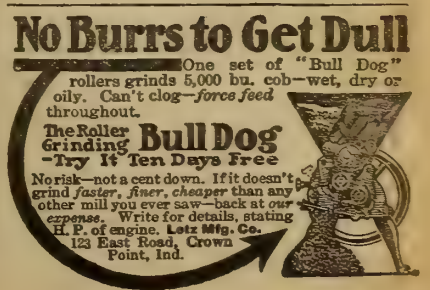
I borrowed the money to buy a stump puller. Have had all the work I could do all the time and have bought and paid for a little home as well as the machine, and this within two years. I next got a larger machine so I could handle all the work that came my way and I am having all the work I can do at a good price.

Such evidences of prosperity are eloquent of possibilities and go a long ways toward adding to the number of farmers who are proving their progressiveness by making the necessary investment in stump pullers and by their use adding to their acres in cultivation.

We should select the papers that we subscribe for as carefully as we select our friends. Our newspaper is as worthless as any other liar if it does not tell the news truthfully. The farm paper that is edited by a man who knows nothing of the hard knocks of actual farming will be a very poor friend to turn to when in need of advice.

A STRONG PULL AND THE ROBBER HEDGE IS GONE FOR GOOD, WITH A SAVING OF FROM FOUR TO TEN ROWS OF CORN.





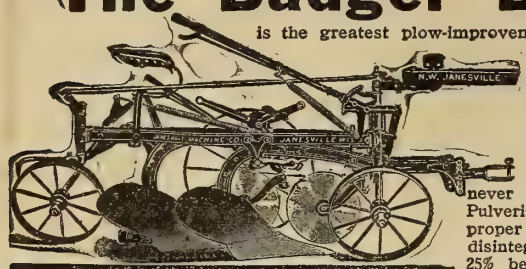
JANESVILLE

Manufacturers of Farm Implements

And Why It Has Won Six World's Plowing Championships

For six years Janesville Plows have been sweeping the boards in the farmers' own plowing matches at Wheatland and Big Rock, Ill. In 1912, Janesvilles won 16 out of 21 prizes, including Sweepstakes and title of World's Championship. Why does the Janesville win *so regularly?* Why don't *other* plows win? Why does the Janesville have a record of 93% and 95½% for *perfect plowing?* The answer is simple. It is because the Janesville is *built* right—the correct *principles*, the finest *materials* and perfect *workmanship*.

The Badger Bottom



is the greatest plow-improvement in over 50 years. It raises the land only high enough to turn over on its own corner. Handles the largest varieties of soil—from lightest to heaviest, from extreme dry to extreme wet. Scours clean, even in land where plow never could be used before. Pulverizes perfectly, allowing proper fermentation, aeration, disintegration. Lightens draft 25% because it runs steady, at even depth, no jerking.

Other Janesville Advantages

Let us send you the facts about the World's Championship winnings and reasons *why* Janesvilles win. Read about the Badger Bottom and other features—Foot Trip, Horse Lift, with complete control of horses—point first action—control of bottom in any position, adjustable foot lever, walking-plow action because of self-leveling device. Also mention if interested in Walking Plow, Riding or Walking Cultivators, Disc Cultivator, Disc Harrow or Corn Planter. All books free. Write *now*.

The Janesville Machine Co.
31 Center St., Janesville, Wis.

Now You Can Do Power Farming On Any Size Farm

Here is the **Baby Avery Tractor** that makes **Power Farming a paying proposition** now on small size farms. It pulls 3 to 4 plows and plows 10 to 12 acres a day. Weighs less than 7500 pounds. Develops 12 Traction 25 Belt H. P. Burns gasoline or kerosene. Sold at an unusually low price—only $1,200.00 F. O. B. Peoria.

For a medium size farm you can get a 20-35 H. P., pulls 5 to 6 plows, turns 15 to 18 acres a day, weighs less than 11,500 pounds and sells for $2,000—or a big farm size 40-80 H. P., pulls 8 to 10 plows, turns 25 to 30 acres a day, weighs only 20,000 pounds and sells for $2,650.00.

AVERY
"Light-Weight" Tractor and "Self-Lift" Plow

Free Book About Power Farming

Gives **definite facts** from the **experience of users** to prove that an Avery Power Plowing Outfit **plows for half or less** what it costs with horses. Tells all about the "Light-Weight" of Avery Tractors that makes them a success where the heavy weight tractors fall down. Explains why Avery Tractors are the **simplest tractors built**, which makes them easy to handle and keep in running order. Describes the wonderful Avery "Self-Lift" plow that **does away with the plowman,** saving all his wages and board besides the hard work of lifting hand lever plows. Also explains fully about the Avery Mutual Benefit Selling Plan of Low Prices, Sold on Approval Terms and Strong Guarantees.

Sold Under the Avery Mutual Benefit Selling Plan—Low Prices—Sold On Approval—

Strong Guarantees

Our selling plan is the fairest and most liberal ever offered on farm tractors and plows. You can buy an Avery Tractor and Plow Outfit at **a low price.** You can buy it **on approval.** Test it out right on your own farm. Don't keep it unless it **proves up right** and all we claim it to be. And after you have decided that it does all this, and have accepted it, we continue to back it up with **strong guarantees.** Of course we couldn't sell on such a plan unless we knew positively that Avery Tractors and Plows are absolutely reliable.

There's no reason why you can't be **saving money and hard work** by Power Farming with an Avery One-Man Outfit, **just like hundreds of others are already doing. Write** and learn all the **facts.**

Write at once for our new complete 1913 Avery Tractor and Plow Book with **Power Farming Facts** and full information about Avery Tractors and Plows and Avery Mutual Benefit Selling Plan. Address

C. C. Carlin, special assignments in central, southern and northern Iowa. Address 715 Clinton Ave., Des Moines, Iowa.

FIELD NOTES.

"Sale of Crow-Type" Polands.

W. J. Crow, Webb, Iowa, will sell a consignment of bred Poland China sows from his well-known herd at his farm on February 21, 1913. The farm is three and one-half miles northwest of Webb on the C. M. & St. P., Des Moines to Spencer, and a half mile north of the Gowrie-Sibley branch of the Rock Island. Mr. Crow has been a breeder of Poland Chinas for a good many years, this being his twenty-fourth year in the business. In that time he has certainly had abundant time and opportunity to study the matter of breedings hogs from every standpoint, the type which gives best returns under average farm conditions, matters of feeding and the practices of breeding necessary to secure a certain type and fix it. Much of the success of the herd is due to Mr. Crow's ability as a judge of the breeding merits of an animal. To prove this, look at the list of boars that he has used in his own herd: Just now he has Crow's Kind, a boar that weighed 700 pounds on the day he was seventeen months old and as big boned as boars ever get. He is now the chief herd boars of Mr. Crow's, as Big Surprise, one of the longest boars of the breed for his build, has quit service. While active, Big Surprise was one of the big ones, but not the tall sort with lots of daylight under him. He weighed 800 pounds at twenty-four months of age. There will be some by him in this sale and perhaps a few bred to him. Big Surprise, a litter sister, was one of the very biggest sows ever owned by John Miller. These two boars, Crow's Kind and Big Surprise, were preceded in service by Hadley Expansion; Up To Date, a boar that showed size and quality in a degree seldom if ever equaled, and then, missing one or two perhaps, going back to Crow's MModel, the boar which really got the herd headed right. Now his is a list of boars that have given the type ot Mr. Crow's hogs for a number

RAYO

THE SIMPLE INCUBATOR
One Gallon to a Hatch
One Filling to a Hatch

Fill RAYO oil tank once, with one gallon oil—the RAYO, with automatic lamp-flame regulator, completes hatch. No trouble, dirt or worry. It's the simple incubator—easiest to run, least work of any; it's the economical incubator—uses least oil of any. Soon pays for itself in oil and labor saved. Makes biggest hatches—fine chicks.

END HATCHING TROUBLES RIGHT NOW

See eggs and thermometer thru double glass top, which raises for airing, cleaning and turning eggs. Lamp under egg chamber gives perfect radiation. Regulator acts on flame—no heat wasted. Automatic ventilation. Turn eggs without touching tray. Clean lamp without removing chimney or tank. Oil tank holds 5 quarts, month's supply. Red-wood case, steel-covered, mahogany-enameled—fire-proof, handsome. **Hatches every fertile egg.** On market 6 years—thousands of enthusiastic testimonials from satisfied users. RAYO hatching chart and $1.50 Tycos hygrometer **FREE.** Low direct prices—freight prepaid. Investigate the perfect incubator. Ask for Free Catalogue No. 14.

"Pedigreed" FRUIT TREES

Quality and Quantity

In buying fruit trees you ought to know the blood that is in them.

We propagate our stock from known trees, selected because of their superior fruit and productiveness. Our trees bear young and produce big regular crops of fancy fruit, because they are bred from parents with a record for both quantity and quality. Observe orchards of ordinary trees, half of them are barren, or producing poor quality. You can save three to four years, and have every tree a producer of fancy fruit, if you plant on pedigreed fruit trees.

Free Book Tells

"Pedigreed Horticulture," our new book, telling of the way we grow pedigreed trees, and why they are the only kind to plant. Write if you are interested in raising better fruit and more of it in half the time.

TREES AND SEEDS THAT GROW

AT IT OVER 28 YEARS

For twenty-seven years I've been selling "Seeds and Plants that grow." I've been selling them direct—at rock bottom prices—no agents' commissions attached. My catalog has always been my only salesman. My

Free 1913 Nursery and Seed Book

is now ready. Send for it. It's the result of 27 years' experience. Lists all kind of trees and plants, farm, garden and flower seeds. Quotes lowest prices, no agents' commissions to pay. Here are a few of the many bargains. Apples 8c each; Cherry 14c each; Plum 15c each; Catalpa Speciosa seedlings 8-12 inch $1.75 per 1000. Remember my seeds are all Nebraska Standard. I pay freight on $10.00 tree orders. Send for catalog, see my prices. A postal brings it.

German Nurseries & Seed House, Box 143, Beatrice, Neb.

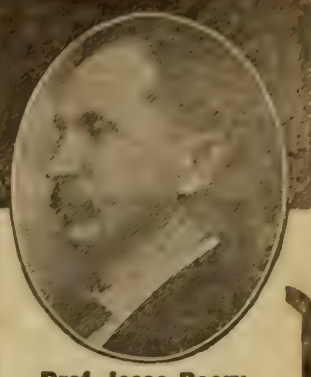
of years. That htey have sired a practical hog and one that both breeders and farmers who are not breeders know is practical has been proven everywhere they go. As Mr. Crow says of some of his sales, "When a man who has never before owned a pure-bred sow will step into the ring and pay around $100 for a sow and then make good on the investment it certainly prompts a man to think he is breeding he right kind." Mr. Crow is a real breeder and his sale is of stock bred by him and raised on his place. It is managed with the idea that it ought to go ou and make money for its buyers. Many of the highest-priced sows and boars of recent sales in the Poland China world have been of stock bred here. Mr. Crow has bred boars that not only head good herds, but have made those herds prominent. This year he has sows and gilts as good as he ever had, they are all strong on their feet and with big bone, they are evenly made and the principal feature in their favor, as we see it, is the fac that there won't be a hog in the sale but that wil be in condition to go ahead insead of backwards on the farm to which it may be sent. Mr. Crow stands squarely behind his recommendations of sows. He wants to make good for you in making good for himself. Get his catalog and study the breeding of the offering. Crow's Kind is a sire of good stock and of prize-winning caliber himself. Straight Edge, one of the younger service boars, is one of the straightest-lined pigs we have seen. He gets his name from that character. He has as good bone and feet as any. The sows from which the gilts come produce ibg litters. Mr. Crow has certainly bred a ytpe of his own and it shows in this character. Last year there were on Mr. Crow's farm sixteen pure-bred **Poland China sows that in three years** farrowed an average of ten and one-half pigs per litter. You cannot go wrong buying here and you will be guaranteed satisfaction if you deal with him. Write for the catalog, mentioning The Homestead. Ray L. Gribben will attend the sale for The Homestead and any bids you send him will be given careful attention. Mr. Crow will see that you are satisfied on anything bought on a mail order. Address W. J. Crow, Webb, Ia.

Ruebel Bros. Sell February 20th.

Ruebel Bros., Marathon, Iowa, sell Poland China brood sows on Thursday, February 20th, in their comfortable pavilion at the farm, a mile east of Marathon. They follow the sales o f G. J. Bloemendaal and Peter Mouw at Alton and Orange City, Iowa, and W. J. Crow, Webb, Iowa, sells the day following the Ruebel Bros. sale, making a compact, easy circuit to attend an a banner bunch of hogs to select from. Ruebel Bros. have their usual aclass of stock to offer and among the fifty head to be sold are ty's Jumbo, is a 600-pound sow right now and raised a fall litter last season. She is a litter mate to Crow's Kind, heading W. J. Crow's herd at Webb, Ia. This heavy-boned sow is bred to Chief Again Price. Luella Longfellow 2d, a two year old by R.'s Longfellow, with a record of big litters regularly produced, raised a fall litter and goes in the sale at 500 pounds bred for March litter to Ruebel's A Wonder. Orange Girl by Orange Chief 3d, a two year old that has always niched well with Price's Giant, included fifteen yearling and two-year-old tried sows, twenty fall gilts and fifteen spring gilts. These sows are by ing, and boars that have made records as several different boars, all of good breed-producers. R.'s Longfellow, Big Orange, Big Surprise, Ruebel's A Wonder, Price's Giant and Chief Again Price are prominent among the sires. For service this season they have used Ruebel's A Wonder, the sire of the good boar, Gerstdale Wonder, in Mr. Bloemendaal's herd, and recently sold to an Ohio breeder; Price's Giant, a big-type hog, and Chief Again Price, the 1911 Nebraska champion, an 862-pound hog at twenty-three months of age. Of the sows Longfellow Lucy 9th by Miller's Longfellow, a two year old, is one of the choice attractions for breeders. She is bred to Ruebel's A Wonder for early March litter. Mollie Orange by Big Orange, dam Big Castle by Big Wilkes, a granddaughter of Beau- will be sold bred to him again. This mating produced the best boar Ruebel Bros. sold this past year. Three big, smooth yearlings, litter mates, Nos. 7, 8 and 9, are worth looking at for big-type sows with quality. They are bred for early litters and are of some of the good breeding of W. J. Crow's herd. Of the younger sows the really attractive feature is the evenness and size of the gilts by Chief Again Price. They are of a type not wonderfully large, but some will weigh 400 pounds. Of these special mention should made of Nos. 35, 36 and 37. The first two are litter mates, out of a dam by Miller's Chief Price, and will bring down 400 pounds on the scales. No. 35 is bred to Price's Giant for middle of March farrow and No. 36 to Ruebel's A Wonder for last of March farrow. No. 37 is by Chief Again Price and out of No. 1 in the catalog. She may be a little larger than the preced-

Learn Horse-Training —Make Big Money!

$1,200 to $3,000 a Year—at Home or Traveling



Prof. Jesse Beery

Send Coupon for "Horse-Trainers' Book" FREE

Prof. Jesse Beery, known from one end of the country to the other as the World's Master Horseman, having retired from the arena with an independent fortune, is giving the world the priceless secrets of his marvelous success. A copy of his wonderful "HORSE-TRAINERS' PROSPECTUS" will be mailed, free of charge, to all who are ambitious to master this highly profitable and intensely interesting profession.

Vast Audiences Thrilled by Beery Exhibitions

The thrilling exhibitions given by this King of Horse-Tamers and Horse-Trainers have never been equalled. His mastery of fierce, man-killing stallions, without whip, curb bit or other cruel devices, has astounded the world. The most unruly horses—kickers, tricksters, balkers—subdued while multitudes watched, wondered and applauded. Medals, trophies and honors of all kinds, showered upon Prof. Beery by admiring thousands, bear eloquent testimony to his matchless skill.

Learn Beery System by Mail, at Home

The Beery Correspondence System of Horsemanship is the only instruction of the kind in the world. The lessons are simple, practical and complete. Learn in spare time, right at home, to take the most vicious horse and subdue him in a few minutes. Prof. Beery can teach you how to break any horse of bad habits—teach a horse to drive without reins. How to tell the disposition of any horse on sight—judging a horse right the first time! How to cure shying, kicking, biting, balking, fear-of-automobiles-and-trains and all other bad traits forever.

Break a Colt in 8 Hours!

The lessons in Colt-Breaking alone are worth the price of the entire course. You can train a colt, in 8 hours, to be absolutely trustworthy. There is big money in breaking colts and curing horses of bad habits.

Graduates Making Big Money

For example, take the case of Emmett White, Kalona, Iowa, now a prosperous professional Horse-Trainer. Mr. White says: "I wouldn't take $500 for what you have taught me. You may judge of my success when I tell you that I have been able to buy a *home and an automobile* solely through earnings from training horses as taught by your excellent methods."

A. L. Dickinson, Friendship, N. Y., writes: "I am working a pair of horses that cleaned out several men. I got them for $110, gave them a few lessons and have been offered $400 for the pair."

Coupon Brings Prof. Beery's Great "Horse-Trainers' Prospectus" FREE

If you want to get into a big money-making profession—if you own unruly horses with bad habits—if you enjoy travel—if you are a natural-born trader and can buy cast-off horses cheap to sell at big profit when trained, send now, today, for this grand Free Horse-Trainers' Prospectus. Tell me all about your horse. (42)

Gangs Are Flexible in The Frame—

Boxings Wear Evenly From End to End—No Binding

Janesville (BUDLONG) Disk Harrow

Flexible where it *should* be —*in the frame!* The *only* disk that wears boxings evenly from end to end—spools are not cramped—there is no binding. That means *less* friction and *lighter draft*. The draft comes *only from the work being done.*

This is the famous **Budlong Harrow** used with greatest success for so many years and *now improved* for even *greater* success, better results.

Note These Other Advantages

Gangs roll on their bumpers at inner ends, so all side pressure is perfectly equalized—no strain on other parts of machine. Independent adjustment of each drawbar allows either side to cut deep or shallow—works perfectly on uneven ground. Disks made of open hearth rolled steel of heaviest gauge. Sharpened on both sides. Removable bearings made of maple or oilled iron and are oiled through tube extending up through weight boxes. Direct hitch to gangs, and eveners placed under pole. No neck weight.

Be Sure to Read Our Book Before You Buy Any Harrow

Write Us a Postal

Read all fa s. Note that Janesville Harrows are made i all styles and sizes; concave, plow-cut, sp ling or cut-out disks, one or two levers, with or without tongue trucks and transports, to cut from 5 to 10 feet in width, equipped with 16, 18 or 20 inch discs. Don't buy till you read our booklet.

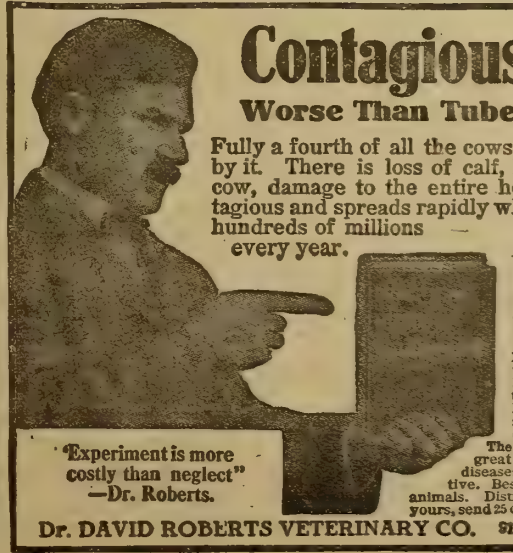
Contagious Abortion

Worse Than Tuberculosis in Cows

Fully a fourth of all the cows of the country are affected by it. There is loss of calf, loss of milk, damage to the cow, damage to the entire herd. Disease is highly contagious and spreads rapidly when started. Losses run into hundreds of millions every year.



Dr. David Roberts' Anti-Abortion Treatment Stamps Out the Disease

because it meets the germ at every turn.
ANTI-ABORTION medicine overcomes the germ in the mother's blood.
ANTISEPTO overcomes the germ in the genital organs.
DISINFECTALL overcomes the germs in the stables.
No one medicine can possibly overcome the disease.
Dr. Roberts' treatment, applied by yourself, makes it impossible for abortion to exist in your herd.

The Practical Home Veterinarian, Dr. Roberts' great book, gives particulars on all animal diseases. 184 pages. Practical, plain, authoritative. Best book published for posting up on your animals. Distributed free at drug stores. If not at yours, send 25 cents and receive a copy direct, postpaid.

Dr. DAVID ROBERTS VETERINARY CO. 914 Broadway, Waukesha, Wis.

ing two and is in every other way their equal. She was bred to Price's Giant November 21st. This is an offering you will like if you see the sows and one from which you will be safe in buying. There isn't a really old sow in the sale —everything is just right for breeders' use. Write for the catalog and you can find just what great breeding there is here. Bids sent to Ray L. Gribben, of The Homestead, will be handled to your satisfaction, and he can get some good ones for you here. Address, mentioning The Homestead, Ruebel Bros., Marathon, Iowa

Slepicka's Short-horn Sale—Last Call.

We wish to again call attention to the sale of Short-horn cattle that will be made by Chas. A. Slepicka, Tobias, Neb., on February 13th. This is a particularly high-class lot of stuff, containing a choice lot of bulls of serviceable ages, as well as a nice lot of females. The cows of breeding age are bred to the great young bull, Diamond Digger by Diamond Goods, the 1912 champion. These are good property and the writer hopes to see a good attendance at this sale. The train service is good to and away from sale. Parties east and west may get off the main line Burlington trains at Fairmont and can take train from there to and from sale. Tobias is also on the Holdredge and Nebraska City line of the Burlington.

McCarty's Hereford Dispersion.

The old, established Hereford herd of T. E. McCarty, Princeville, Ill., will be dispersed at public sale at the stock yards in Peoria, Ill., Thursday, February 27th, the day following the McCray sale at Kentland, Ind. Mr. McCarty has been breeding Herefords for over twenty years, but is forced to make this dispersion sale owing to a change in his farming operations. There will be forty-six head in the offering, thirty-nine females and seven bulls, a vigorous, thrifty, breeding lot of cattle with the best of blood lines. Included in the bull offering are Mr. McCarty's two herd bulls, Bondsman, three years old, a son of the great Disturber, out of a Beau Brummel dam, and Perfection 2d, a grandson of the champion, Perfection, out of a dam by Perfection, givng him two crosses of the blood of this great sire

Tutt's Chester White Sale.

G. H. Tutt, Marathon, Iowa, will hold his fourth annual sale of bred Chester White sows on Wednesday, February 19, 1913, at his farm near Marathon. Mr. Tutt's offering last year was one of the best of the year and though he has not so many in this sale the class is as good as ever. Not many will get a better offering together and and farmers looking for good stock of this breed want to remember the date of the sale. His herd boars, Counsellor and Crusader, the sires of most of the offering, are both big boars that have a lot of bone and stretch. The young boar, Village Boy by the great boar heading Barr & Rae's herd, Chickasaw Choice, is promising a good maturity and we would feel safe in buying sows bred to him. Nos. 24 and 25 in the sale are extra good gilts of October, 1911, farrow and by the old boar, Major, both bred to Village Boy. They are smooth, big sows and are outstanding in quality. Get a catalog of this sale and plan on being there. You will find sows that you will like. Address, mentioning The Homestead, G. H. Tutt, Marathon, Iowa.

Davis & Son's Duroc Sale.

Probably the best offering of Duroc Jersey bred sows ever put up by Geo. Davis & Son, Milford, Neb., is the one that will be sold by them on February 21st. The writer recently called at this farm and we were of the opinion that the sale stuff was the best we ever saw here. They are all of splendid breeding, being sired by such boars as Valley King, G. D.'s Nebraska Col., Royal Critic, Brigg's Crimson, Watt's Model, Cleatham's Pride, Vanquisher, B. & C.'s Crimson and Silver Chief by Valley Chief. They are all bred to Beem's Lincoln Chief, Model Advancer and I Am A Crimson Wonder 5th. Beem's Lincoln Chief is a son of Lincoln Chief by Ohio Chief and out of Hazel Kirk by Proud Advance. He is sure one of the great boars of Nebraska today. I Am A Crimson Wonder 5th is by the famous sire, I Am A Crimson Wonder 2d, and out of a daughter of Ohio Chief Jr. by Ohio Chief. He is a litter mate to the great young boar, I Am A Crimson Wonder 4th, that was rated so highly by Mr. Beem. Try to get to this sale if possible, but if you cannot attend send a bid on some of the choice ones. Mention The Homestead when you write for catalog.

Nelson's Valley King Offering.

On Tuesday, February 11th, at Lindsay, Neb., Fred Nelson will sell forty head of Duroc Jersey bred sows and all but two will be bred to the noted grand champion boar, Valley King, and this should make his sale one of the most attractive held in the West this winter. He is also selling two good daughters of Valley King in the sale. This offering consists of twenty-five yearling and tried sows by the champion, Belle's Crimson Wonder; Red Chief Wonder; Crimson Jack; A. N. Kruger; Royal Critic, and King The Col., and fifteen fall sows and spring gilts, the fall sows all by Medoc Over by the champion, Medoc Jr., and the gilts a choice lot by Sensation Wonder, Belle's Wonder, Red Chief Wonder, Cleatham's Pride 2d and two by the great Valley King. Performance proves Valley King to be one of the most worthy Duroc Jersey boars ever produced and in the shows at Iowa and Nebraska, 1911, Valley King was first-prize aged boar and an outstanding grand champion in both shows. He is of that type, size, vigor and breed character that stamps a worthy sire and one valuable asset in any herd of Durocs is a litter by Valley King. Prize blood predominates throughout this sale offering and from the standpoint of Mr. Nelson's loyalty to the Duroc business and the exceptional attractiveness and real worth of the sows in this offering

FRED SCHAEFER & SON'S
SALE OF STRAIGHT SCOTCH SHORT-HORNS
AT ESTHERVILLE, IOWA, FRIDAY, FEB. 21st

60 HEAD of cows and heifers, with richest Scotch blood, a string of Duchess of Glosters of about a dozen Orange Blossoms, Butterflys and others of the same excellent character. Will sell Straight Goods an exceptionally good son of the Carter's Choice Goods one of the good breeding sons of the famous Choice Goods and out of Butterfly Rosemary, dam Imp. Rosemary. This bull has sired tops in other sales, and is a topper himself. Cows of breeding age all with calf or bred to this bull. Young bulls in the sale, all good ones and by this bull, are worth your investigation. The young stuff by Straight Goods is extra choice. Send for catalogs mentioning this paper. Sale to be held at Estherville, Iowa. Address

FRED SCHAEFER & SON - - - RALEIGH, IOWA

the sale should be liberally patronized. Make it a point to attend the Fred Nelson sale if you possibly can. Catalogs will be mailed upon application.

"The Pines Farm" Duroc Sow Sale.

We wish to again call attention to the sale of Percheron stallions and mares that will be made at the state fair grounds at Lincoln, Neb., on February 20th. The horses are practically all home bred and they are certainly a very fine lot of stuff. A few imported horses are included, which are also very choice. These horses are contributed by the following well-known breeders: Wm. Parr, Frank Davidson and L. Wall, Ruskin, Neb.; also J. C. Day & Son, Cadams, Neb., and Geo. Barber, Oak, Neb. These men are not dealers or speculators, but are breeders and are striving to produce good stuff. Nearly all of these horses were bred by them and are fair representatives of their different studs. These gentlemen have organized what they call the "Nuckolls County Horse Breeders' Association" and Percy Baird, Ruskin, Neb., is the secretary. For full information of this offering and catalog of same write Mr. Baird at once. Mention The Homestead when doing so. See advertisement

Walker & Son's Poland Sale—Last Call.

In previous issues of The Homestead the writer has described at some length the blood lines and many individuals that go in th Poland China sale to be made by Thos. F. Walker & Son, Alexandria, Neb., at Fairbury, Neb., on February 15th. At this time we wish to point out the advisability of buying sows in this sale as a business investment. The writer has purchased sows in the Walker & Son sales where they have made the purchasers 200 per cent net on the original investment and this sort of stuff is the kind to tie to. Walker & Son breed good hogs and they spend a large amount annually to keep them before the people. Hogs equally as good but not known would be worth a great deal less than these hogs that are already advertised. The best boars that money will buy or that years of painstaking effort will produce are used in this herd. You can start at the top by starting with this kind of stuff and if years of time are worth anything to you save them by starting right. If you cannot attend this sale send bids to J. C. Price, representing The Homestead, and the best possible sections will be made for you. If you can possibly arrange it, go to the sale.

Chas. F. Sprague's Cherry King-Jack's Friend Bred Sow Sale, February 18th.

The writer again feels at a loss how to express himself. So much has been said publicly and through the press of Chas. F. Sprague, Lima, Ohio, and his noted Duroc herd. We feel that after all that has been said, many readers of The Homestead have not realized the greatness of this herd nor have given due credit to Mr. Sprague and his great effort to improve the Duroc hog. Not being satisfied with adding a fine specimen here or there wherever they may be found, he felt that he could do the work of improvement better to buy a whole herd that had been bred along the best blood lines known to the breed for generation after generation. After looking over the field he decided if possible to buy the great herd of Ira Jackson and a little later we found him in possession of this great herd, the record of which Homestead readers are mostly posted. As year after year in The Homestead's careful reports of the big state fairs and expositions our readers almost always found in striking a total of the greatest winners of prizes in Duroc classes it was Ira Jackson. So not only had this herd been bred along the most improved lines, but the winnings showed the correctness of the matings for results. At this time the great boars, Cherry King, Jack's Friend and Tippy Col. were in service and the sow herd was rich in this blood, backed by Orion Chief blood throughout. Mr. Sprague bought this entire herd, boars and all, and moved them to Indianwold Farm, the beautiful country place owned by Mr. Sprague. The herd has done well for Mr. Sprague since transplanting it on his farm, and in getting off right Mr. Sprague has had such competent men in charge as J. E. Drake and Dan Grant. And now at this time Mr. Sprague and his assistants have selected a most valuable offering, the animals being bred to the noted boars mentioned above. These boars are siring prize winners and are assisted by Pal's Prince, champion of champions at Indiana State Fair for three years, he being a full brother to Colonade, grand champion at International, 1912. We advise Homestead readers who breed Durocs or readers who think of going into the pure-bred hog business to get in touch with Mr. Sprague. The catalogs are ready now and you can get one by writing Mr. Sprague, mentioning The Homestead. There is a solid week Duroc circuit in northern Ohio that you can attend at one cost. (See the advertisements in this issue.) If you find it impossible to attend bids sent to H. E. Browning will be handled on the square.

Last Notice for Henry Dorr & Sons' Poland China Sale.

Poland China breeders are all interested in the sale of bred sows to be held by Henry Dorr & Sons, Remsen, Iowa, at their farm near Marcus, Iowa, on Tuesday, February 11th. Real breeders, men who study the practice of mating in their most difficult aspects, and then have the patience to keep up the search for propor individuals or blood lines to secure the results they want, can be counted on one's fingers, and we believe that practically every Poland China man in the country concede Henry Dorr a place in this rank. His efforts certainly show in the sows he has entered for this year's sale. A test of the mastery of breeding is the degree of uniformity shown in the breeder's output. Every man who attends Dorr & Sons' sale after seeing the even lot of sows going through the ring that day will give him credit for being able to successfully pass that test. The fall gilts by Dorr's Expansion are a remarkably even lot and among them the first and third-prize fall gilts at the Interstate fair at Sioux City last fall. The first-prize sow is out of Evergreen Lady, one of the great old brood sows that has always produced high-class pigs. The second-prize gilt is out of Pawnee Lady 2d by Dorr's Tecumseh, and the third-prize gilt out of Evergreen Snow by Pawnee Lad 2d. The first and third-prize gilts are bred to D.'s Monarch, the first-prize pig at the Nebraska State Fair, and the second-prize gilt to the first-prize aged boar at Sioux City, Expander. There is prize mating for any one. We doubt if such attractions go in any sale. And the litter sister to the first-prize gilt, a sow at least as good as her sister, is also bred to D.'s Monarch. They are all bred for March litters. These ought to bring the best breeders from everywhere in Poland China circles. This entire sale is permeated with winning stock. The spring gilts are by Big Defender, a first-prize pig at Sioux City; some by the most popular grand champion of the year, Blue Valley Chief. Be sure to get the catalog and look it over as to breeding and then plan on being at the sale. If it is not possible to come, send bids to Ray L. Gribben, Homestead representative, who will give you careful and conscientious treatment. Address, mentioning The Homestead, Henry Dorr & Sons, Remsen, Iowa. Remember this is the postoffice address and the railroad point is Marcus. See advertisement

Fred Schaeffer's Short-horn Dispersion.

F. H. Schaeffer, Raleigh, Iowa, will sell some of his Scotch Short-horns at Estherville, Iowa, on Friday, February 21, 1913. Every animal listed in this sale is straight Scotch and among the cattle to be sold are the most prominent families of the strain. The cows are roomy, big breeding matrons; the young stock, as an indication of the producing qualities of the herd, show selection of the right sort of breeding individuals. At the head of this herd and, of course, bearing the responsibility for the young stock, is a grandson of that old show bull, Choice Goods, out of a Butterfly Rosemary dam, Imp. Rosemary. This bull is called Straight Goods and he was by Carter's Choice Goods, a sire that left a lot of high-class cattle from his breeding. Straight Goods was sold at M. P. Hancher's sale a couple of years ago for a good price, and since coming into this herd he has certainly made a great development. He weighs a ton right now, he is deep, broad and looking over his back from behind he shows an evenness rare in any bull. His color is a rich roan. He is quiet, has a first-class disposition and as a breeder he has a beautiful lot of calves to show his worth in this direction. The cows in the offering are suckling calves many of them and nearly all will either be heavy in calf or safe to the service of Straight Goods. There are about a dozen Duchess of Glosters in this sale and among their number are some of the good ones that men have been buying to improve their herds. Besides these, Lavenders, Orange Blossoms, Secrets, Butterflies, Mayflowers, Rosebuds and Victorias help make out the list. Among the cows Roan Buttercup 2d, out of Imp. Strawn Buttercup 24th, safe in calf to Straight Goods and a good calf in the sale by the same sire merits special mention for breeders looking for top cows Lady Belle 7th is a good cow and has as her best recommendation a young red bull calf that already shows character and style which mark only the very best and most prepotent sires. This calf is worth a lot of competition on the part of good breeders. There are a pair of two-year-old bulls, one by Royal Crown, dam Village Beauty, and another by Choice of Archers, out of Rosebud 7th, both of good size and growthy. We predict here a place to buy some extra good bred cows at prices that will make people who buy good money within the next few years. The cattle have the breeding back of them, the cattle business has a great future before it, and now is a good time to get started right in his line. The catalogs of the sale are ready. Write for them, mentioning The Homestead, and addressing F. A. Schaeffer, Raleigh, Ia.

Johnson's Poland China Sale—Last Call.

One of the good stockmen of central Nebraska is Gilbert Johnson, Osceola, and one of the good Poland China herds of the same section is owned by him. His annual brood sow sale will be made on February 11th and we would like to see a good attendance at this sale. The hogs are really good, many of them extra good, and they are of excellent blood lines. An extra choice lot of yearling and two-year-old sows will be offered and they are every one good. Mr. Johnson is selling several of these sows that he had intended keeping, but, owing to the fact that a number of the gilts did not breed soon enough he was obliged to fill out the number with these extra good sows. They are mostly the get of J.'s Jumbo by Wade's Jumbo and they are mostly bred to Hather's Hadley 2d, the sire of the International champion, Hadley Over. This is the sort of stuff to buy for results and those unable to attend the sale will be especially well taken care of if they will send bids to Thos. A. Shattuck, Hastings, Neb., who will represent The Homestead at this sale. Mr. Shattuck is a well-known Poland China breeder and a judge of the very highest type. Send all bids to him, in care of Gilbert Johnson, Osceola, Neb.

Fred White's Holstein Sale.

Frank White, Hampton, Iowa, is holding a Holstein sale on February 19th and 20th. About 125 head will be sold and among them some of the best bred animals to be found anywhere. Mr. White's herd bulls are Groveland Inka Hijlaard, a sister to Groveland Pontiac Hijlaard, the pair having won twenty-seven first prizes during the past three years as the produce of cow, and they have never been defeated in this class. There will be some sired by and some bred to this grand bull. Another herd bull is Cornucopia Pontiac Johanna Lad, a full brother to K. P. Manor Kate, the world's champion senior two-year-old heifer that has the record for butter for seven days, thirty days and one year, her yearly record being 1,023 pounds. There will be a number of heifers sired by and a number of cows bred to this great bull. Mr. White's herd has won more prizes in the last three years than any other herd of its size in the United States. There will be consignments from two other great show herds that are producing herds as well. This sale will afford the Holstein breeders of Iowa and adjoining states an excellent opportunity to get some of the very best animals of the breed at their own prices. The constantly increasing demand for dairy products makes the future outlook for the breeders of dairy cattle very bright and now would be an opportune time to get some good foundation stock, as the price of pure-bred Holsteins is constantly advancing and they are bound to prove a profitable investment. See the advertisement

S. J. Miller and Dr. Herr's Duroc Sow Sale.

On February 19, 1913, the above gentlemen will hold their bred sow sale at Fairview Stock Farm near Lima, Ohio. Every Duroc man knows or knows of Dr. Herr, for he has been pushing forward a class of Duroc hogs that has made him justly famous. Mr. Miller is some hog man, too, and he and the doctor make a real high-class double team. The offering this year is up to the doctor's usual high standard, both in breeding, size and quality. They have to be all this or they don't pass muster with Miller and Herr. They are sired by Defender, Volunteer, Superba, Cherry King, Highland King, Jack's Friend, Crimson Col., Defender King, King of Cols., Fancy Col., King's Col., Prince Wonder, Orion Chief, Helen's Chief, The Professor, Nugget, Premier Col., Prince Wonder, Pal's Prince, King Pal's Last and others. There are many of them bred to Helen's Chief, the boar that has put more prize winners in the state fair shows than any living son of Ohio Chief. Others are bred to King's Col., Volunteer, Superba, Col.'s Pilot Wonder, Crimson Col., B. & C.'s Col., Highland King and Defender King. They will sell a few choice spring and fall boars sired by Defender, Highland King, Superba, Crimson Col. and Royal Instructor. All in all we believe it the greatest offering Doctor Herr has ever made, but why shouldn't it be, with a man like Mr. Miller to help. This sale is one of the week's circuit of northern Ohio. Free entertainment will be furnished at the Empire Hotel. Fairview Farm is near Cairo on C., H. & P. R. R. and traction

RESULTS ARE OBTAINED BY USING

FRAZIER'S DISTEMPER CURE

Its results and effects are certain in all cases of Distemper, Influenza, Coughs, Colds and Shipping Fever. We refund your money if not satisfactory in all cases. WASHINGTON, IOWA.

Free conveyance to farm. H. E. Browning will represent The Homestead and bids by mail or wire should be sent him, in our care. Colonels Igleheart, Reppert and Irwin, auctioneers. For catalog look up the advertisement of this issue and address either S. J Miller, Lima, Ohio, Route 8, or Dr. A. H. Herr, Elida, Ohio.

Halford's Great Offering.

On February 21st, R. W. Halford, Manning, Iowa, will make his annual public sale of fifty head of his noted large-type Poland China brood sows, and if he ever sold a good lot in his life they will be in this sale. Not since Mr. Halford got in the business has he sold such an offering as he has listed for this sale. The greater portion of the sows cataloged will be bred to his 1,000-pound boar, Mabel's Wonder, the first-prize aged boar at the Iowa State Fair last fall. Mabel's Wonder is one of the greatest sons of Smooth Wonder 2d, and he is one of the first of all the 1,000-pound boars to win first place at the Iowa State Fair. As one of the foremost today in the state of Iowa he is regarded right up among the very first. Thirty of the very best sows that he is selling in this sale will be bred to Mabel's Wonder and this certainly should be attraction for those breeders who want to get into the king row. Among these will be daughters of the noted show and breeding boar, Chief Price Again, Smooth Wonder 2d, A Wonder, Tecumseh Longfellow, Hancher's Long Wonder, Orange Boy, Big Chief, Jumbo Prospect, Gold Dust Hadley and the great Mabel's Wonder. Those sows not bred to Mabel's Wonder will be bred to the 920-pound boar, Long Jumbo, one of the largest two year olds in the state; Long Price, a son of Chief Price Again, and Perfect Wonder, a son of Fesenmeyer's A Wonder. We have personally inspected the Halford offering and know whereof we speak when we say that it is one of the outstanding big-type offerings of the winter season. It is by far the best lot of sows in the best condition that Mr. Halford has ever sold since he has been in the business. Write for his catalog and kindly mention The Homestead. Bids sent to M. T. White, Homestead representative, will be looked after on day of sale.

Banks' Short-horn and Poland China Sale.

A. J. Banks, Montour, Iowa, will hold a sale of Short-horn cattle and Poland China hogs at his farm on February 18th. He wil sell about fifteen good Short-horn cows and bulls and about twenty sows and gilts. There will be five bulls, three of which are Scotch. The Scotch bulls are all sired by Prince Consort and of the Louisa family. Prince Consort is by Ury's Bes and down through the pedigree you find Steadfast, Pro Consul and Sjartan Hero. He comes from the Scotch Lady Susan family. Prince Consort as a calf was a wonderfully thick, soggy, low-down fellow and he has made good as a sire. Two of the calves are extra good. There will be one cow by Golden King and out of Imp. Daybreak 4th. The twenty sows are a good lot, but we want to call attention to a great litter of five gilt sand a boar that will sell sired by Colossal and out of Anna Price. This litter will average around 350 pounds and have the bone and smoothness with their size. These are the kind that suit the best breeders. There are also some good gilts by the noted Big Orange. The sows ar bred to one of the best yearlings in the state, Woodrow Wilson, a grandson of Mastodon Chief and out of a dam by Fisher's Bell Metal. Mr. Banks has one of the best lot of fall pigs that can be found anywhere. They are worth going to see and he also has a number of individual cement hog houses that are very practical. Pay him a visit on sale day. Write him for a catalog, mentioning The Homestead

Lonergan's Last Call.

On February 12th, at Florence, Neb., D. C. Lonergan will again come before the public with another grand good offering of sixty head of big-type Poland China brood sows, and those who have attended his sales before will realize that here will be one of the great offerings of the winter season. The greatest part of this offering is either sired by or bred to the champion, Big Victor, a boar that needs no introduction, as he is known throughout the corn belt for the siring of great and growthy quality stuff. There will be twenty head of spring gilts and twenty head of fall yearlings. They are sired by Big Victor, Guy Price 2d, Big Tom, I Am Big Top (the sire of Futurity Jack), King Giant, L.'s Quality, Big Tom and Guy Price Last—not a better lot to select from was ever put up. They will be bred to Big Victor, Guy Price Last, Big Bob by Big Victor and out of the dam of Champion Colossus, Big Tom and L.'s Quality. Big May, the dam of Futurity Jack, the sensational boar pig of last year, winning first in both the open and futurity shows, is to be sold in this sale bred to Big Victor. Here is an opportunity to buy one of the grandest big quality sows to be sold this winter. Others that mention should be made of are Victor's Goods and Sensation, both by Big Victor and bred to L.'s Quality; Lakeside Belle by Lakeside Wonder, from the Polly herd, and bred to Big Victor. Also the first and second-prize senior yearling sows bred to Guy Price Last and Big Tom. Now, just a word about how they are fed and kept. Mr. Lonergan forces every sow and pig to travel at least a quarter of a mile a day and return if the weather is possible. They are fed but little corn and are fed largely on oats, shorts and alfalfa hay. We have personally inspected the Lonergan offering and know whereof we speak when we tell you it is one of the great offerings of the winter season. M. T. White will represent The Homestead at the Lonergan sale and will care for any bids sent him in Mr. Lonergan's care.

Widle & Son's Great Duroc Sale.

On Monday, February 10th, at Genoa, Neb., R. Widle & Son will make their annual Duroc Jersey brood sow sale and they are selling a great lot of sows. The Widle & Son sale is an important one, because there will be thirty-five head in the sale bred their noted boar, Critic B., champion and grand champion boar at the Nebraska and Kansas State Fairs in 1912. In their caalog they have the following to say of their great boar: "We first saw Critic when we got to Lincoln las fall and it was a case of 'love at first sight.' After learning how much money it took to buy him we stopped long enough to examine him and his pedigree, also two of his gilts, which were beside him, then write a check for the amount and drove him to our pens. When the news spread tha we had landed a new hog many of the leading breeders visited his pen and all said they believed he would be the champion of the show. When we drove him out the next morning he was placed first in class, and when we drove him out on Wednesday to compete for grand championship Judge Bernett said, 'That hog makes a man smile,' and after looking the class over made him the grand champion of the show. Judge Lovejoy, after he got through judging the Poland Chinas, looked him up and turning to some breeders, said: 'I have judged hogs since the eighties and I have never seen a better one.' Judge Folk, when he made him grand champion of the Kansas State Fair, said he was in a class by himself." Widle & Son showed twelve head at the Nebraska and Kansas State Fairs last fall and won thirty-three ribbons, consisting of two reserve champions, two junior champions and senior champions, twelve first premiums, five second premiums, four third premiums, one fourth and two fifth premiums. This should be sufficient to show just what **kind of an offering they wil sell in this** sale. M. T. White will represent The Homestead at the sale and will care for any bids sent in his care.

Peery's Last Call.

Following the sale of E. S. Barker, at Doon, Iowa, on February 13th, J. M. Peery, Alvord, Iowa, will sell a splendid draft from his Utility herd at his farm on Friday, February 14th. This sale is held by a man who can grow hogs to the very best that is in them. He is a natural stockman and gives the greater share of his time and attention to the business. He ought to have a chance to entertain the biggest crowd of buyers ever this year, for his hogs and his work in building up the breed merit such a crowd. Mr. Peery has the breeding in his herd that is equal to any and will have some of the best sort of sows to sell to breeders and farmers. He never tries to make a show record, but we believe his herd could make a good try at such a record if he set out to try it. He has at the head of the herd ange, dam by Beauty's Jumbo. This Peery's Long Orange, sired by Big Ormakes him as strongly bred for size as any boar that is in this circuit. There are none that have any more breeding for size back of him. He is a full brother to Big Black Jumbo, owned by Mr. Bloemendaal, and produces the same good sort of gilts. Jessie's Chief is a yearling boar that just now looks mighty good. We believe he is fully as

200 Plants $1.00

100 of that choice new variety Senator Dunlap and 100 of two other choice varieties, and printed instructions with each order on how to grow them.

good as his litter brother, Mondamin Master, the sire of Mr. Barker's futurity pigs. He is big, smooth and has good bone and feet. His get will be worth a good strong fight for. The other boar, Peery's Expansion by Great Expansion by Dorr's Expansion, dam Mollie Price 2d by Orange Chief, is right in line with his mater in service. There are sows in this sale, all good ones, by Lyon Chief, Smooth Wonder 2d, Big Bone 2d; gilts by Peery's Long Orange, Chief Wonder by A Wonder 107353, and on the dam's side of the pedigree the sows are by such boars as Dorr's Expansion, Big Bone, Hadley's Surprise and Our Dude. Mr. Peery's offering has earned the presence of a good string of breeders. The last day of this great circuit of sales and it is worth sta ing over for. We do not believe any better abrgains will go through any sale, and if you can't get there send your bids on some of the sows to Ray L. Gribben, Homestead representative, who will give them honorable care. Get a catalog now. Address, mentioning The Homestead, J. M. Peery, Alvord, Iowa.

HEREFORD SALE

60 BULLS AND HEIFERS

By FUNKHOUSER, GABBERT and OTHERS

OUR SEVENTH BIG ANNUAL TWO-DAY SALE

To be held at KANSAS CITY, MO., MARCH 4-5, '13

EVERY ANIMAL TESTED FOR TUBERCULOSIS. Sixty splendid, big, lusty bulls of serviceable age. Forty excellent young cows safe in calf or with calves at side. Representatives of herd bulls that have made Hereford history. A **selected** lot from the following **well-known breeders:**

Benton Gabbert, Dearborn, Mo.
W. A. Dallmeyer, Jefferson City, Mo.
Funkhouser Estate, Plattsburg, Mo.
R. T. Thornton, Kansas City, Mo.
J. W. Lenox, Lake City, Mo.
S. J. Gabbert, Dearborn, Mo.
T. W. Carmichael, Odessa, Mo.
James A. Gibson, Odessa, Mo.

For catalog or other information address R. T. THORNTON, Mgr., 1309 E. 15th St., Kansas City, Mo

My Fourth Annual Jack and Jennet Sale of the

GLOVER LEAF VALLEY JACK FARM

WILL be held in my new sale pavilion at La Plata, Macon county, Mo., on March 10, 1913, when I absolutely guarantee to sell the best bunch of jacks and jennets that I have ever offered for sale and one that will equal or surpass any offering of this stock made during the year 1913. Every jack and jennet registered and black with white points. I want you to write now for my catalog illustrated with the photographs of every animal taken from life January 2, 1913, and telling you more truths about this stock than I could possibly put in a great big five-page advertisement costing thousands of dollars. I sell more jacks that pay for themselves in one and two years than any man in the world.

WRITE FOR IT NOW

G. C. ROAN, PROP., LA PLATA, MACON COUNTY, MO.

M'CRAY'S FIFTH ANNUAL PUBLIC SALE

KENTLAND, IND., WEDNESDAY, FEB. 26,

76 HEAD. 25 BULLS, 15 SONS AND GRANDSONS OF PERFECTION FAIRFAX.

FOR THIS sale 76 head have been selected, by all odds the most desirable lot ever offered from this herd. There are 25 show and breeding bulls listed, including seven sons and eight grandsons of the champion, Perfection Fairfax, the greatest Hereford sire this country has ever produced. Fifty-one show and breeding females are in the offering, including a number of daughters of Perfection Fairfax. All females of breeding age not sired by Perfection Fairfax are bred to him or one of his sons, so that no matter what you buy in this sale you are sure to get some of the Perfection Fairfax blood. The offering is particularly strong in bulls, every one of the 25 head listed being good enough for herd service, while there are several outstanding show propositions that are little short of sensational. Several members of our 1912 winning show herd, both male and female, are included in this sale. You will have a chance to attend both a cattle show and a cattle sale at Kentland, February 26th, and the public is invited to this sale with the positive assurance they will have an opportunity to pass upon the strongest lot of high-class breeding Herefords ever offered by a breeder in a draft sale, and with a very few exceptions they were all bred at Orchard Lake Farm. The handsomely illustrated catalog tells the story. It will be sent only upon application. Mention The Homestead and address

PERCHERONS, SHIRES, BELGIANS

SAY, Brother Horseman, if you want to buy a stallion go to **Hudson, Iowa,** and see **Crownover's** new importation of big, flashy, draft, ton type that are sound and right in every way, and a square deal is guaranteed. No hot air, but high-class horses at right prices. Send 10c stamps for large picture of horse parade.

WILLIAM CROWNOVER - - HUDSON, IOWA

IRVINEDALE BELGIANS

IMPORTED and home-bred stallions and mares. All ages. Prize winners and the produce of prize winners. Top quality at reasonable prices. Address

CHAS. IRVINE, Ankeny, Iowa.

JACKS AND JENNETS

One of the largest selections of black Mammoth Jacks in the West. 15 to 16 hands, standard measure. The kind all are looking for. Priced right. Guaranteed. Reference: The banks of Lawrence, 40 miles west of Kansas City. Address **Al. E. Smith, Lawrence, Kansas**

MAASDAM & WHEELER, Fairfield, Iowa

IMPORTERS AND BREEDERS OF PERCHERONS

Our new importation of 81 Percherons arrived in Fairfield September 18th. Forty weanlings will soon arrive, making about 125 imported stallions and mares. These with our 75 American-bred stallions and mares of all ages form a magnificent array of big, heavy-boned, sound Percherons from which buyers may select. We have by far the best lot of Percherons on hand at the present time that we have had since engaging in the importing business. We know we can please you in a horse and our prices are very reasonable. Visit us or write us for what you want, mentioning the Homestead.

PETER HOPLEY & SON

LEWIS and ATLANTIC, IOWA,

BREEDERS and IMPORTERS

PERCHERON AND SHIRE STALLIONS AND MARES

One importation arrived October 25 and are now offered for sale. These are the best lot of horses that have crossed the Atlantic this year. Another importation now on the road. Write or come and see our horses.

NORTH & ROBINSON CO.,

IMPORTERS AND BREEDERS OF

PERCHERON, BELGIAN and SHIRE

STALLIONS AND MARES.

50 HEAD of American-bred, pasture-raised stallions from 2 to 5 years old. The good rugged kind with plenty of bone, weight and quality. 40 head of American-bred mares. They are as good as grow. We always have a good assortment of Imported stallions and mares weighing a ton and over. Next importation will arrive in February. Every day a bargain day at our barns.

Large horse calendar sent free to horse breeders and dealers.

NORTH & ROBINSON CO., Grand Island, Nebraska

STALLIONS THAT ARE RIGHT

PERCHERON, BELGIAN and GERMAN COACH.

Our barns are filled with seasoned horses of strong individuality, extreme quality and the highest breed type. We will price them at bed-rock figures and give you a guarantee that is different and more liberal than that of any other firm. You will save money if you investigate our plans and terms and see our horses. Mention The Homestead when you write.

OLTMANNS BROS., Watseka, Illinois.

Eighty miles south of Chicago on Chicago & Eastern Illinois and T. P. & W. Railroads. Foreign headquarters, Leer, Germany.

PERCHERONS of this Type and BELGIANS and SHIRES ALSO

OF the very highest order are the only kind imported by Jos. Rousselle & Son. The Custom House records show that we import the most valuable horses that come to the West. Former buyers our best reference. We sell these horses at the prices ordinarily asked for inferior ones. Let us tell you of them. Address

JOS. ROUSSELLE & SON,

25 miles west of Lincoln. **SEWARD, NEBRASKA.**

TWO GREAT SALES
BIG-TYPE POLAND CHINAS

FLORENCE, NEB., FEB. 12th

The greatest offering of big-type, quality-kind Poland China sows ever sold in the West. Write for catalog and mention Homestead. Address

H. S. Duncan, auctioneer. **D.C. LONERGAN, Florence, Neb.**

FLORENCE, NEB., FEB. 13th
Kuhl's Closing-Out Sale

50 HEAD 50

INCLUDING all my great herd sows, fall and spring gilts. Also my two great herd boars, **Big Tom** and L's Quality. Among the great sows will be **Tecumseh Belle.** No better will be sold this year. Also Lady Hadley, the best producing sow I have ever owned, and others too numerous to mention. These are bred to Big Tom, L.'s Quality and Big Omaha. Mention Homestead when writing for catalog. Address

H. S. Duncan, auctioneer. **H. P. KUHL, Florence, Neb.**

Bids sent to M. T. White, Homestead representative, in care of above readers, will be properly cared for on day of sale.

LAWNDALE SHORT-HORN AND POLAND CHINA SALE

TO BE HELD AT LAWNDALE FARM

Bellevue, Iowa, Thursday, Feb. 13th

24 SHORT-HORNS, consisting of nine bulls and fifteen females. Among the bulls are some herd headers, particularly a June Rosebud calf by Monarch Viceroy, a November yearling Rosebud by Archer Boy, a November yearling Victoria, a Rose of Autumn and a Fashion, all by Monarch Viceroy, Monarch Viceroy also sells and he has been a consistent winner at the Iowa State Fair for the past three years. He is by Orange Monarch and of the Princess Royal family. The Great Victoria show cow, Victoria Pride, sells, as does the great two-year-old show heifer, Sweet Fashion. The females are of the Victoria, Strathallan, Rosebud, Butterfly, Duchess of Gloster, Fashion and Rose of Sharon families. If you want a herd bull or a grand young cow, attend the sale.

30 BIG-TYPE Poland China bred sows will sell. They are by Big Bone, Big Bone Expansion, Peerless Monarch by Big Bone, Columbia Dude, and are bred to Big Jumbo and Dude's Masterpiece by Columbia Dude. These sows are big, smooth, heavy boned and have quality. Their breeding is of the best. Write me for catalog mentioning The Homestead. Auctioneers, Colonels Bellows, Cooper, Burge, Mullaney.

SPIRIT LAKE CHESTER WHITE SALE

Fair Grounds, Spirit Lake, Iowa,

F. W. La DOUX, THURSDAY, FEBRUARY 13th

40 HEAD of choice Chester White sows, including matured sows, fall and spring gilts and a mighty even bunch. One of the banner offerings of this breed for the year. Sires—Joe Cannon by the great Onward, out of dam by Dunbar's Choice, and Gold Coin by Wonder by Nashua Boy, dam Fancy Girl 4th by Prince B., out of Fancy Girl. Service boar in addition to above, Silver Dollar by Ben Royal, dam by the great boar in Mr. Gaffey's herd, Sam B. Few Chester White boars sire the well-shaped pigs with **big bone** and **good feet** that Gold Coin does. A sow bred to him will give vigor and size and strength to the pigs she farrows. This is an extra good Chester White offering. C. C. Evans and Wm. Foshier, auctioneers. G. M. Thompson, Chester White breeder, will represent The Homestead.

F. W. La Doux, - - Spirit Lake, Iowa.

HORSES AND JACKS.

HOMEWOOD STOCK FARM PERCHERON, BELGIAN, SHIRE STALLIONS AND MARES

Now is the time to buy a good stallion or mare. We have the kind you have been looking for. Our horses arrived home in October, are now perfectly acclimated and in the best of condition to do you a lot of good. The Percherons are two and three years old with size, bone and draft horse qualities, many of them weighing over a ton and not fat.

Our mares are of the best brood type. All are in foal and plenty of ton mares to select from. Every animal guaranteed sound and a satisfactory breeder. Others say we have the best bunch of two-year-old Percherons they ever saw. You will say the same. Come and see us or write for full particulars. You will find horses right, terms right and prices below others of equal merit. We have also a lot of big, heavy-boned American-bred stallions at surprisingly low prices. Don't buy until you have seen our stock. Homewood is on the main line of the Big Four and I. C. R. R., twenty-three miles south of Chicago. Trains hourly to and from the city.
S. METZ & SONS, HOMEWOOD, ILLINOIS.

BREEDER OF PERCHERONS AND BELGIANS

I HAVE now for sale a number of stallions ranging in age from three to seven years. Some are home bred and others are imported. They weigh from 1,900 to 2,300 pounds. Prospective buyers are invited to make a personal inspection of these horses. Terms reasonable. I have one three years old and weighing 2,400 pounds.
P. J. EGGERS - Denison, Iowa.

SPECIAL OFFER THIS WEEK.

IN ORDER to move the few horses that I have on hand am naming special prices for quick sales. One splendid gray and three blacks. Would trade one for mares. Can please those looking for a good horse and save them some money. Percherons and Short-horns our specialty. F. A. Egger, Crystal Lake Stock Farm, Sprague, Nebraska.

FOR SALE

HOME-BRED registered Percheron stallions and mares. Also standard bred, both sexes.
E. P. HAMILTON & SONS,
Garden Grove, Decatur county, Iowa. R. F. D. 2. 23 miles southwest of Chariton.

Prize-Winning Clydesdales 2 STALLIONS, one full brother to the great Forest King, one a yearling by him. Size, big, flat, clean bone, good feet and lots of draftiness their characteristics. One mare, the dam of the yearling colt. I absolutely guarantee these to be all right. Address Jas. Pedley, Britt, Iowa.

AN EXTRA LOT OF YOUNG CLYDESDALE

STALLIONS that I will sell at right prices. Address R. O. MILLER, Route 1, Lucas, Ia.

PERCHERONS FOR SALE Stallion and mares. A Short-horn bull 5 months old. W. H. Miller & Sons, Independence, Ia.

FOR SALE—Duroc gilts bred. Shetland stallion, Ruby's Trinket 10579, black and white, 3 yrs. old, half value. Fred Hanks, R. 3, Box 55, Winnebago, Minn

JACKS AT PRIVATE SALE

IF you want the BIG kind come to one of the oldest breeding barns in the state where you will find the big, heavy-boned, black fellows that will do your country good and at reasonable prices. Mention The Homestead and address
G. M. SCOTT, - Rea, Missouri.

Percheron Stallions

ONE coming three, two coming two-year-old stallions, sired by 2,200-lb. stallion, out of daughters of Georgiana, one of the greatest mares of the breed, won the blue at the Iowa State Fair, producing 18 living colts without a break, three of them state fair winners. They are a wonderful family of show horses, and sure breeders. These young stallions will all make better than ton horses. We are pricing them to sell. Address, mentioning Homestead,
WOODLAWN FARM, Sterling, Illinois.

WHAT KIND OF COLTS

WILL your mares drop this spring; pure breds worth $175 to $275 at weaning time, or grades for which you will be lucky to get $100 at same age? Starting right doesn't cost so much as you imagine. t costs no more to rear pure breds than "scrubs."

Purchase Percherons

Free Bulletin C on request. Wayne Dinsmore, Sec'y Percheron Society of America, Union Stock Yards, Chicago.

PERCHERON horses wanted. Will trade one-half value of my 400-acre farm to start a herd. If interested write to C. C. Cook, Draper, South Dakota.

FOR SALE A pair of registered Morgan stallion colts coming 2 and 3 years old. For description and price write F. Bowman, Eldora, Ia.

FOR SALE—Bay Clydesdale stallion, 4 years old. A good individual. A proven breeder out of a family of breeders. Wm. E. Coe, Mechanicsburg, Ill.

DORR'S 15th ANNUAL POLAND CHINA SOW SALE

MARCUS, IOWA,
(POSTOFFICE, REMSEN, IOWA)

TUES, FEB. 11, 1913

65 HEAD practically everything our own breeding, and we will be glad to have you compare them with the best you have seen. Thirty-four gilts all sired by Dorr's Expansion. Spring gilts by Big Defender Expander, a few by the great champion, Blue Valley Chief. Offering bred to Dorr's Expansion, Expander, Big Monarch by Gold Dust Hadley and Big Tecumseh by Blue Valley Chief. Our herd has produced prize winners for us. Stock we have sold has produced prize winners for others. Farmers who breed only for market have made good money with our breeding. This is the best offering we have ever made and is bound to keep the record straight.

H. S. Duncan, J. A. Benson, auctioneers.

HENRY DORR & SON, REMSEN, IA.

Des Moines Futurity Litter to be Sold.

E. S. BARKER, DOON, IOWA.

Lyon Chief or his sons sired first-prize pigs at Iowa, Minnesota and South Dakota, 1912

J. A. Benson, Auctioneer.
Ray L. Gribben, Field Man for Homestead.

Sale, Feb. 13, 1913. DOON, IOWA.

J. M. PEERY

ALVORD, IOWA,

FRIDAY, FEB. 14, '13

A DISTINCTIVE offering of 45 Poland Chinas, 28 fall gilts, 10 spring gilts and a half dozen tried sows. The entire lot is made up of the same kind that have given success wherever we have sent them from previous sales. Many of them have produced boars which are among the tops in several herds. There are good things in plenty here. Sows and gilts sired by Peery's Long Orange by Big Orange; Great Expansion by Dorr's Expansion; Jessie Chief by Lyon Chief; Big Bone; Chief Price Again, and Ruebel's A Wonder. Our selections for our herd have been consistently along a definite line. All bred early and real brood sow types.
J. A. Benson, auctioneer.

J. M. PEERY - ALVORD, IOWA.

Ray L. Gribben, field man for The Homestead.

FRANK WHITE'S SECOND ANNUAL SALE AT

HAMPTON, IOWA, WEDNESDAY and THURSDAY, FEB. 19 and 20

125 HEAD OF REGISTERED HOLSTEIN-FRIESIAN CATTLE 125

THIS includes the dispersion of two entire herds. More A. R. O. animals and A. R. O. breeding in this sale than any other sale ever held in the state. The offerings are of the very best of breeding, including granddaughters of Hengerveld De Kol, King of the Pontiacs, King Segis, Homestead Jr. De Kol, Woodcrest Nig De Kol, Pietertje Hengerveld De Kol, Paul Beets De Kol, and many other of the leading sires of the breed. Also daughters of Cornucopia Pontiac Johanna Lad 48355, full brother to the new world's champion senior two-year-old heifer, K. P. Manor Kate, which just recently finished a yearly record of 1,023 pounds of butter. If you want the best, don't forget to come. Will also sell fifteen of the best grades that ever went in a sale ring. Animals over six months tuberculin tested. Catalogs now ready.

Auctioneers, H. E. Haeger, Algonquin, Illinois; I. H. Stinson, Hampton, Iowa; J. W. Ford, Cedar Falls, Iowa

FRANK WHITE, Hampton, Iowa.

40 HEAD 40

I AM selling the greatest offering I have ever put up for sale and they are all cholera immune. Five of the best tried sows I have ever sold, sired by Expansion B., Big Victor, Chief Price Jr. and Choice by Chief Leader. Twenty head of Lakeside Wonder gilts, the best you ever saw, also some good gilts by Polly's Chief Price. The five aged sows are all bred to Lakeside Wonder and others to Marvel Chief, a line-bred Chief Tecumseh boar. Write for my catalog and mention The Homestead. Col. W. B. Duncan, Auctioneer. Address,

C. C. Polly **Whiting, Iowa**

M. T. White will represent The Homestead at these two sales and will care for any bids sent in his care.

GEO. DAVIS & SON'S ANNUAL SALE

DUROC JERSEY BRED SOWS

will be held at farm 5 miles north of

MILFORD, NEBRASKA, FRIDAY, FEBRUARY 21

40 CHOICE sows will go in this sale and a number of them will be bred to the great boar, **Beem's Lincoln Chief.** He is certainly one of the best boars of the breed. This is the greatest offering that we have ever put up. Come and see them. Mention The Homestead and address for catalog.

GEO. DAVIS & SON, **MILFORD, NEBRASKA**

Col. Ray Page, auctioneer. J. C. Price fieldman.

Dispersion Hereford Sale

PEORIA, ILL., THURSDAY, FEB. 27th

46 HEAD--7 BULLS Including my herd bulls, Bondsman by Disturber and Perfection 2d by a son of the champion, Perfection. This offering will comprise a most useful lot of well-bred cattle, strong in the blood of Disturber, Beau Donald, Perfection, Corrector, March On and other great sires. Ten cows will have calves at foot. I have been breeding Herefords for twenty-two years with pleasure and profit, and were I not making a change in my farming operations these cattle would not be for sale at any price. Send for the catalog, mentioning The Homestead. Colonel Reppert, auctioneer. This sale follows that of W. T. McCray, at Kentland, Ind., February 26th, and can be easily reached from there. Address

THOS. E. McCARTY, **PRINCEVILLE, ILL.**

Mousel Bros.' Combination Sale

120 HIGH-CLASS HEREFORDS

To be sold in sale pavilion, GRAND ISLAND, NEBRASKA,

FRIDAY AND SATURDAY, FEB. 14 AND 15,'13

Choice selections from eleven of the choice herds of the country. All cattle are of desirable ages and all in good condition. The contributors realize that buyers wish the good ones and they have determined to make this offering one that will not be excelled for some time.

70 BULLS GO IN THIS SALE

and they number among them some as choice as have ever passed through a sale ring in the West. If in need of a herd header for the best kind of a herd, or a car of range bulls, be on hand.

A Group of Herd Heading Bulls in this Sale

The great shortage of beef cattle is just beginning to be felt, but the real shock is yet to come. Range herds of consequence are not many, and corn-belt pastures are mostly empty or already in crops. All beef cattle are quite certain to appreciate in value, but the greatest opportunity for investment is the pure breds.

THE 50 FEMALES

that will go in this sale will be a chance to buy choice breeding stuff that may not be equaled again soon. Buy these cattle before the great rise in cattle is widespread. Attend this sale. It is an opportunity that the careful business man should not overlook. Be on hand.

The contributors are breeders of high-class cattle, their names should be sufficient guarantee of the value of this offering. They are: Gudgell & Simpson, Independence, Mo.; Hugh Whiteford, Guilford, Mo.; O. E. Green, Genoa, Neb.; Geo. O. Benger, Callaway, Neb.; Mousel Bros., Cambridge, Neb.; E. C. Rodwell, Cambridge, Neb.; A. C. Smith, Lexington, Neb.; Fred Mues, Edison, Neb.; G. E. Stryker, Rising City, Neb.; Dauchey Bros., Stockdale, Neb., and Thompson Bros., West Point, Neb. Send for the catalog of this big sale at once. Mention The Homestead when you write. Address

MOUSEL BROTHERS, CAMBRIDGE, NEBRASKA

COLS. BRANSON AND SNELL, AUCTIONEERS

Bob Ewing's Great SUPERBA and B. & C.'s COL. BRED SOW SALE

NEW HAMPSHIRE, OHIO, MONDAY, FEB. 17TH,

50 Head of Select Duroc Sows Bred to Superba and B. & C.'s Col. **50**

THE great gilt, American Beauty by Superba, bred to B. & C.'s Col., is one of the best specimens of the breed and is sold as a special attraction. These sows are sired by Defender, Superba, Orion Chief, Reformer, Prince of Cols., King of Cols. Ideal, Educator, Instructor, Crimson Col., Chief H. E., Highland King, King of Cols., King of Cols. II., Freed's Col., Top Col. II., Helen's Chief, Defender King, and others. We purchased ten of the top gilts from the East Bros. herd mostly by Defender and all bred to Superba. Among these there is a star attraction sired by Crimson Chief, second-prize senior boar at Ohio State Fair, 1912. The Superba gilts are bred to the great champion boar, B. & C.'s Col., while seven head are bred to the great pig, Orion Chief, full brother to Crusader. The offering is first class throughout. All mail and wire bids should be sent to H. E. Browning, representing The Homestead, in our care. Colonels Igleheart, Reppert and Irwin, auctioneers. For catalog and other information, address

BOB EWING, NEW HAMPSHIRE, O.

J. W. STORM'S GREAT VOLUNTEER SALE

The Storm Center of Ohio Duroc Sales

SEVILLE, OHIO, THURSDAY, FEB. 20

50 Head of Choice Bred Sows AT PUBLIC AUCTION **50**

25 HEAD bred to VOLUNTEER, champion at the International at Chicago, 1911. For this boar we paid $1,500. The sows bred to him are by Defender, A.'s Defender, Orion Chief, Jack's Friend, Proud Professor, Defender King, King To Be, Crimson Col., Good E Nuff, Tax Payer, Good E Nuff Chief. As a special attraction will sell one sow by Volunteer and Crimson Col., bred to Defender. Other sows are bred to the noted young boar, Royal Superba by Superba. These sows are the tops of many sales and we have endeavored to offer only the choicest specimens bred to the noted boar, Volunteer, that has won more prizes at the leading state fairs and expositions north, south, east and west than any boar living. As a sire, his get have won prizes and topped many sales. Among them is the great Volunteer litter that sold for $1,100 at auction. This is an opportunity offered the breeders in the East to get the best Duroc blood known to the world. Everybody invited. Those who cannot attend should send bids to H. E. Browning, representing The Homestead, in our care. Colonels Reppert, Igleheart and Irwin, auctioneers. For catalog, address

J. W. STORM, SEVILLE, OHIO

S. J. Miller and Dr. Herr's Great Public Sale

of

75 Head of Choicely Bred Durocs at Lima, Ohio, Feb. 19, 1913

THE offering consists of fall yearlings and spring gilts and tried brood sows. Sired by such sires as Defender, Volunteer, Fancy Col., Helen's Chief, Superba, The Professor, Cherry King, Jack's Friend, King of Cols., Orion Chief, Morton's Top. Col., John's Ohio Chief, High Chief, Duke of Cols., Pal's Prince, King Pals Last, King's Col., Highland King, Premier Col., Prince Wonder, Crimson Col., Nugget, Defender King. These sows will be bred to Helen's Chief, the greatest living son of the old $6,000 hero, Ohio Chief, and a few to King's Col., Volunteer, Superba, Col.'s Pilot Wonder, Highland King, B. & C.'s Col., Crimson Col., and Defender King. Will also offer spring boars by Defender, Highland King, and Superba, also fall pigs of both sexes by Defender, Crimson Col., and Royal Instructor. Don't fail to come and spend the day with us on Fair View Stock Farm. This is the next day after Sprague's sale, and will be the opportune time of your life to buy Ohio Chief blood. Sons of Ohio Chief are very scarce, and Helen's Chief is the greatest one left since the death of The Professor and John's Ohio Chief. Write for catalog. Send mail bids to H. E. Browning, representing The Homestead. Colonels Igleheart, Reppert, and Irwin, auctioneers. Address

S. J. Miller, R. R. No. 8, Lima, Ohio

or Dr. Herr, Elida, Ohio

Out of town guests will be entertained the night before the sale at the Empire Hotel, Lima, Ohio. All cars and trains met at Cairo, one and one-half miles east from Fair View Stock Farm. Entire herd is immuned three times a year, making them cholera proof and safe to buy.

MENAUGH BROS.' Bred Sow Sale

WEST POINT, - - INDIANA

Peter Mouw, Orange City, Ia.

Biggest Poland Sows, Feb. 19

MATURED sows and yearlings selected from the foremost big-type herd. I have never sold them bigger for their ages.

Look at this list of boars; I have bred them or their immediate ancestors: **BIG JUMBO, Chief Price, Fairfellow, Longfellow 2d 52999, Longfellow 7th 95747, Long Wonder 85533, Long Wonder 90693, Surprise Wonder 4th, Smooth Big Bone, Black Big Bone, Big Knox, Big Orange, Long King, Long Orange, Smooth Wonder 2d,, Big Jones, Big Wonder, Boyden Jumbo, Peter's Jumbo, A Wonder 107353** and many others that have made this type famous.

Sows bred to Black Big Jumbo, Square Jumbo, Long Orange, Big Hal, Tecumseh Jumbo, and by boars of similar breeding. This is an offering of great brood sows, roomy, stylish, showy and **all big.** Buying here means getting big blood at its very foundation. Cols. J. A. Benson and Ira Cottingham, auctioneers. Ray L. Gribben, field man. Address

PETER MOUW - - Orange City, Iowa

Crow's Type Poland Chinas

WEBB, IOWA, February 21, 1913,

55 HEAD of bred sows and gilts by Crow's Kind 57395, Big Surprise 48274, Hadley Expansion 51540, Big Orange, King Mastiff and others. Bred to Crow's Kind, Big Surprise, Big Porter, Straight Edge and Brilliant. If you want sows that possess **utility** and **commercial value** in highest degree, attend this sale. I am selling the heaviest-boned blood lines and the hogs to match. Stretchy, motherly brood sows in condition to farrow big litters and raise them. These hogs will fatten at any age, but will grow largest of any breed. They carry a great finish when properly fitted, have wide backs and are well ribbed and stand on short pasterns and best of feet. We are not booming hogs, but are selling stock that make good. **Ask our customers.** We sell strictly on merit, and that this is no empty claim is proven by our record of twenty-three years. These are the owner's statements and he makes them good. Ray L. Gribben, of The Homestead, will attend the sale. Let him buy you a sow. We guarantee satisfaction. Please mention The Homestead. W. R. Ritchie, auctioneer. Address

Frank Iams' Imported Horses

IAMS' Imported "Percherons and Belgians" and "Iams' Best Buy." They need no "State Stallion Law" to make them sound. They are all sound "Bellringers."

Ikey Buyer:—Get into **"Iams' Money Saving Game."** See **Iams** and his **"Peaches and Cream"** Imported Stallions, "Prize Winners," that he sells at **$1,000** and **$1,400** (few higher). Imported mares— **"Topnotchers"**—at **$700** and **$1,000.**

"Ikey," be a **"Wise Guy"**—Buy **"Show Horses" of Iams**—who has crossed the Ocean **50 times** for horses and **sold 4,444 Registered Horses. "Iams' 30 years of Success"** make him a safe man to buy from at **Special Low Demonstrative Prices.** "Everybody Is Doing It."

These two Percheron stallions won second prize each in old classes in 1911 at Paris, Nogent C Rotson and Chartres, the three largest Percheron horse shows in France. It took the $10,000 Percheron to place them second. Iams has many Paris and European prize winners, all for sale.

are **"up-to-the-minute"** and 10 years in advance. They are the **"Drafty, big-boned tops"--Nifty, big "Black Boys"**—the **real "medal winners"**—sensational show and business horses of note, **"ripe peaches"** from the **"select 400." Big, classy "Peaches and Cream"--"Black Boys."** The **"Iams Brand"** of drafty **"top notchers."** Iams' **1912 importation of Percheron and Belgian stallions and mares are in the "Pink of Condition"** and ready for a good selling. **"Ikey Boy," smile sweetly,** and hundreds of **Iams'** satisfied customers **"will sit up and take notice"** that **Iams,** the **"King Pin"** horse importer, is still **"doing business"** at the **"old stand" (and good for 50 years). Iams** is **"pushing"** his horses to the front. The big **"Peaches and Cream" "Boys and Girls"** are **attractions** that can't be **overlooked.** Iams **mesmerizes** buyers with **"real drafters,"** at **"bargain prices,"** and having the **"horses as advertised."** Iams' **"competitors"** and "hammer knockers" are **"boosting** Iams" by their "knocks," until **now he is known** as the **"Millionaire Horseman,"** and on **"Easy Street,"** and growing fast. **Ikey, "Come on along," and sing Iams' song.** He is selling these **"aristocratic," fancy "Black Boys" cheaper** than ever **—or better horses for less money —$1,000 and $1,400** (few little higher).

100 Percheron and Belgian Stallions and Mares 100

They are **"Models"—"Humdingers."** They are two to five years old, weigh 1,700 to 2,500 lbs.; 80 per cent blacks, 50 per cent ton horses. Many **"prize winners"** and **"gold medal horses."** Big, drafty **"top notchers,"** with big bone, quality, style, finish and **action to burn.** They are **"Eye-openers."** Larger and better horses than seen elsewhere. Big **"business propositions"** that make **"the wheels work fast"** under a **"Buyer's hat." "Georgie, dear,"** Iams made a **"big killing"** by buying his horses in Europe in **October and November, 1912. "Dry weather," "bad crops,"** war scare, **"close money,"** and **"Iams' cash"** caused the **"prize winners"** and **"tops"** to be thrown on the market for a **"good selling." Iams "cut the melon"** and bought the **"rippers"** at **"knockout prices." Iams** will give his customers the benefit of his **"good buy." "Ikey, boy," come on down town** and see **Iams** and the **nifty, big "Black Boys" and "Sensational" low, democratic prices. "Everybody's Doin' It."**

Then get into Iams' "Get Rich Wagon" and save $1,000

on a **"top stallion,"** (and you wear the diamonds). Iams is a **"big fly in the ointment"** in the horse world. "He keeps the gang guessing." **Iams** sells **"imported horses only"**—(They win 90 per cent of prizes at big horse shows). **No "American-bred full-bloods"** with questionable breeding—**No "auction stuff"** or **"peddlers' horses"**—Only **"choice drafters"** of big size, bone, quality and finish. **"Iams' Horse Show"** makes you **"sit up and take notice"** and buy a $3,000 stallion at **$1,000 or $1,500.** Then your sweetheart wears the diamonds.

Iams' imported horses are "registered," "approved," "branded," "inspected" and "certificates stamped O. K."

by Governments of **"France and U. S. A."** Iams has the **"crack stallions and mares"** you "read about." Buy horses of **Iams** and you won't **"get stung" in horse or price. "Dolly D,"** waltz me around once again, **"Ikey;"** land me at **Iams' box office** and importing barns. Full to "the roof" with **"Black Boys"** (all must be sold) **Reduced prices.** All the world knows Iams and his **"Peaches and Cream" horses. 1912** was Iams' best business year. **1913 promises to be a bumper** year to **Iams** and **his customers. He saved $300,000 to stallion buyers** in 1912. Watch **"Iams' smoke in 1913."** Iams' 30 years of **successful business make him a safe man** to do business with. **Iams sells horses "on honor."** A boy or a lady can buy as cheap as a man. **"Ikey,"** be the "wise guy." Buy imported **stallions of Iams. He is reliable** and a **"Live wire"** for **Big Bargains.**

Iams' 1913 Horse Catalog is an "eye-opener."

It has **"a laugh"** and a **$1,000 bargain** in every line. A **"bunch of gold," the "book of books,"** to stallion and mare buyers. It is full of **"wide-as-a-wagon drafters"**—the real **"peaches and cream"** stallions. It shows largest imported stallions and mares in the United States, "true to life," and **truths, facts, "business propositions,"** and 100 illustrations of **"top notchers"** and the **"tricks of stallion peddlers"** and **"auction block"** salesmen. It is the **finest,** most elaborate, and **original up-to-date book in the world. Iams,** the **"Square Deal" horseman,** makes every statement in **ad or catalog good**— or you get the $500 he **hangs up. Iams** guarantees to sell you a

Better Imported Stallion at $1,000 and $1,400

(few higher) than is sold to **stock companies** for $2,500 to $5,000. Imported mares, **$700 and $1,000. Iams** gives 60 per cent breeding guarantee; pays freight on horse and fare of one buyer. He can furnish $1,500 insurance. **IAMS buys and sells every stallion himself.** Saves buyers $1,000 in **commissions and middlemen's profits.** He buys stallions by **"trainload."** He speaks the languages—(saving 20 per cent). He **is not in the "Stallion Trust."** He pays no **"Slick Salesman"** a commission to help **"do you."** He has no **2 to 10 partners**—to share profits. He **"pays cash"** for his horses—and sells **"top notchers"** by **"hot advertising"** and having **"the goods." "Big Moike,"** leave your **"happy"** home and buy a **"top"** stallion or pair of **imported mares** (of **Iams**) that bring colts that sell at **$500 each. "Papa,"** don't let those **"auction men" "hand you a lemon"** in one of those **"so-called" "American full-bloods" of questionable breeding.** Buy an **imported horse** of **Iams, the "reliable horseman."** Then we will **"all wear diamonds." Iams' "selling clothes" fit all buyers. Write for Iams' million dollar horse catalog.** Iams won't let you go without a **Peaches and Cream** stallion or mare. **"He sells the tails off them."** Iams' guarantees are backed by **"half million dollars."** References—1st National and Omaha National Banks, Omaha; Packers' National Bank, So. Omaha; Citizens' State, 1st State and St. Paul State Banks, St. Paul, Neb. Iams buys big ad space because it is cheaper than flannel-mouthed horse salesmen.

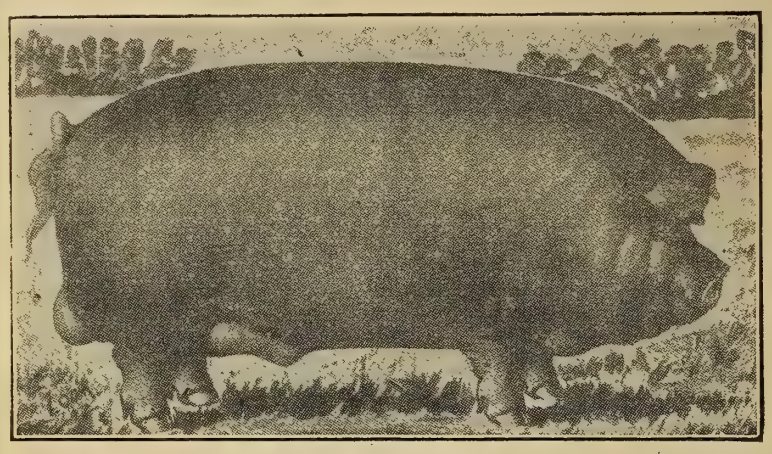
TWO OF THE GREATEST DUROC JERSEY OFFERINGS

of the season will be the sales of

GEO. BRIGGS & SONS AND GILBERT VAN PATTEN & SON

CLAY CENTER, NEB., TUESDAY, FEB. 18,'13

DAUGHTERS of Lincoln Wonder, Cleatham's Pride, Crimson Wonder 4th and B. & C.'s Crimson make up the greater part of the forty head that we are selling. We have a large herd to draw from and only top things will be offered. We want to make this the greatest offering that has ever left our farm.



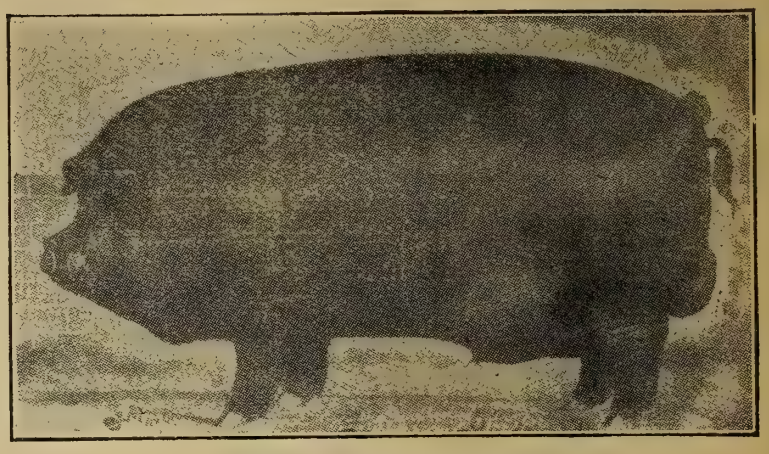
LINCOLN WONDER.

Nothing but high-class sires have ever been in use on our farm. Probably the greatest sire of top sows that we ever owned is Lincoln Wonder. Some are bred to him. Others to Cleatham's Pride, Clay Model, Crimson Wonder 4th, and Queen's Crimson. Try to be with us sale day. We will not disappoint those looking for good ones. J. C. Price, field man. Colonel Callahan, auctioneer. Mention Homestead and address for catalog

GEO. BRIGGS & SONS, CLAY CENTER, NEB.

SUTTON, NEB., WEDNESDAY, FEB. 19, '13

WE are listing a number of yearling sows that are sired by the champion, Golden Rod King. Others are by Uneeda Crimson Wonder, Prides C. Wonder, Lincoln Chief 2d and Golden Model 5th. We made no fall sale the past season and have saved every top thing for this sale and the forty offered are select.



UNEEDA CRIMSON WONDER.

We believe we are offering greater value in the lines of breeding we have for this sale than at any time. Everything is bred to Uneeda C. Wonder, Model Wonder, or Queen's Col. We believe we are the best equipped for herd boars that we have ever been. There is splendid value in these matings. Arrange to attend this sale. J. C. Price, field man. Colonels Callahan & Kraschel, auctioneers. Send for catalog at once and mention The Homestead when you write. Address

G. VAN PATTEN & SON, SUTTON, NEB.

CHAS. F. SPRAGUE'S

ANNUAL SALE

DUROC BRED SOWS

AT

INDIANWOLD FARM, LIMA, OHIO,

TUESDAY, FEB. 18, 1913

THE same boars and the same sows that used to produce for Ira Jackson, of Tippecanoe City, Ohio, that big, smooth, growthy type of Duroc, are still in my herd and, since I added his herd over a year ago to my own, when he retired, my effort has been to extend the work begun by him. My task has been "to better the best," and in the offering I have are to be found animals with growth, quality and size combined. The crosses are the Orion, Col., and Ohio Chief families. The animals are bred to farrow in February, March and April to Jack's Friend, Grand Champion Ohio State Fair and first at International; Cherry King, the greatest living sire of the fancy, prize-winning type; Joe Orion 2d, first and third prize winner at the International; and Pal's Prince, three times shown at the Indiana State Fair and never defeated and full brother to the grand champion at Indiana and at the International in 1912.

Will the reader whose herd has not yet reached the highest point of development or perhaps is still a grade herd allow me to remind him of the efforts of the agricultural press, experiment station and college to move us to add to our profits by better breeding of live stock? I believe in this movement and know that every sow in the offering is qualified to help in this campaign for better live stock.

Every animal received the double treatment against cholera before the breeding season and my herd is guaranteed healthy.

Catalogs are now ready. Send name and address. If you cannot attend the sale send bids to Cols. Reppert, Igleheart or Harry Browning, field man for The Iowa Homestead.

CHARLES F. SPRAGUE, Lima, Ohio.

LINGFORD'S GREAT

POLAND CHINA BRED SOW SALE

Will be held in Bradstreet & Clemens' sale pavilion

GRAND ISLAND, NEB., THURSDAY, FEB. 13, '13

50 HEAD, mostly Gold Dust Hadley and Sampson sows. That a sow is bred to or sired by Gold Dust Hadley or Sampson is about all that need be said. Most of this offering are. A few are bred to Revenue Exception, the best young boar that I could possibly find last fall. He is a grandson of Exception. Every one of the sows listed for this sale are the real utility kind. Every man who bought in my last winter sale made money. They will do so again this year, as I breed hogs that make money for all they consume, and they are ready to market at desirable ages. They are the kind that can and do win in the greatest hog show on earth, the Nebraska State Fair. Attend this sale, or send bids to J. C. Price, field man. Col. Z. S. Branson, auctioneer. Mention The Homestead and send for catalog at once. Address

W. A. LINGFORD, DANNEBROG, NEB.

Z. S. BRANSON, Auctioneer.

6TH ANNUAL SALE GRAND CHAMPION CHESTER WHITE BRED SOWS AND SHORT-HORN CATTLE

AMES, IOWA, FEBRUARY 18, 1913

56 SOWS, 3 herd boars, 20 Scotch Short-horns, 5 cows with calves at foot, 6 bulls. Four aged sows, 14 spring and 7 fall yearlings, 31 gilts make up this grand collection of brood sows. Lenora 3d, grand champion sow at 1912 Iowa State Fair, 5 of her gilts, 7 half-sisters and her dam included. Blood of the leading champion sires is represented in this herd. The sows are large, massive ones, with quality, sired by Chickasaw Choice, B. & R.'s Pathfinder, and bred to Hiland Chief and Chickasaw Choice. The second-prize aged boar at Iowa, 1911-12, included. Short-horns have Victorias, Secrets and Narcissus, all straight Scotch. Two herd bull propositions, Iowa Sultan by Scotch Sultan and Juno's Victor by Juno's Heir. Send for catalog which will show you what these good lines are.

Auctioneers, C. C. Evans and H. N. Donhowe. C. C. Carlin, field man.

POLAND CHINA BRED SOW SALE

will be held at farm one-half mile south

CLARE, IOWA, FEB. 22, 1913

50 HEAD of choice sows and gilts in strictly thrifty and healthy condition. A big-type herd with two extra good boars at its head. Miller's Choice not only carries an enviably rich pedigree, but he is in the class with the biggest and smoothest herd boars. Chief Price A. by Chief Price 2d, dam Mollie A. by A Wonder 107353, Fesenmeyer's boar, is as well bred and also a big smooth one which sires class. Giant's Equal by Equal's Giant by Long King's Equal, out of son by D.'s Longfellow and carrying three Chief Price crosses in his dam's pedigree is the young service boar. The sows will not be loaded with fat, but will be in good going condition. Miller's Choice sired some extra good gilts that will be sold. They are big, long and with good feet, backs wide, hams full and deep bodied. You can buy right here. Make your own prices. Get a catalog and then plan on being at the sale. Good railroad facilities for getting to and from sale. Make either Clare on M. & St. L., or Barnum on I. C. J. A. Benson, auctioneer. Ray L. Gribben, field man. Mention Homestead and address

ROOFING LUMBER PRICES WIRE and FENCING BUILDING MATERIAL

No Money Down

Our Great 1913 Announcement

You can order a complete carload of material including everything you need to construct a building and we will ship it forward to you without you paying us a cent down.

Write Us for Our Liberal Terms

You are safe when you deal with us. Our capital stock is $2,000,000.00 and 20 years of honest dealing have earned a place for us in the public confidence that is unquestioned.

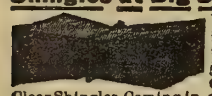
You can buy a carload of Building Material from us without paying us one cent in advance. All we want to know is that the money will be paid us as soon as the material is received, unloaded and checked up. Our terms are more liberal than anyone else offers.

Lumber Prices S-m-a-s-h-e-d

Yes, we mean smashed. Absolutely busted to pieces. That's our policy. We quote prices on lumber that will positively save you big money. If you will send your lumber bill we will send you a freight paid estimate that will mean a saving to you of from 30% to 50%. Every stick is absolutely first class, brand new and fully up-to-grade such as you would buy from any reputable house in the United States.

We have determined that the year of 1913 is going to be the Banner Year in our great lumber department. We have on hand 20,000,000 feet of high-grade lumber suitable for the construction of Buildings, no matter for what purpose intended Come to our great yards in Chicago and let us show you this stuff actually in stock. No other concern in the world has a more complete stock of everything needed to build, whether Lumber, Shingles, Structural Iron, Plumbing, Heating, Doors or anything else that you may need. Do you know that lumber is getting scarcer and scarcer every year? Yet our prices are lowest and will continue so until our stock is gone. WRITE TODAY.

Shingles at Big Saving



We have a special lot of 1,000,000 5 to 2 Common Clear Shingles Coming in, on which we are making an exceptionally low price of $2.47. Other grades at lowest prices.

EXPLANATION

Why We Are Called the "Price Wreckers"

CONSIDER what becomes of the stock of goods when a manufacturer, jobber or big retail merchant goes bankrupt, or "busted" as the saying goes. In the year 1911 ten thousand merchants met with financial distress—that's why the Chicago House Wrecking Co. exists. If the stocks offered are sufficiently large, if the goods are new, clean and desirable, they find their way naturally to our 40 acre plant for distribution, at a small added profit to our hundreds of thousands of customers, who, in this way get wonderful bargains.

In many cases our prices do not represent the original cost of production. There is not another concern on earth that can meet our prices, simply because no other concern has the buying and economical distributing facilities which we enjoy. It is only natural therefore, that we have become known as "Price Wreckers".

Where Your Dollar Does Double Duty

Every time you buy from us, your dollar takes on an increased purchasing power. We are the safety valve between the public and high prices. We recognize no Trusts or Associations—our methods are along original and unique lines. We are not plodders—we are merchants in the fullest meaning of the word, and the wise public have not been slow in realizing our position in the world.

Our great plant at 35th and Iron Sts. is a Mecca for the people of Chicago and surrounding country. Thousands of visitors from every part of the country make a yearly pilgrimage to our institution, and buy their yearly supplies. Are you getting all the benefit that you should from this excellent opportunity? We urge you to learn more about the wonders of our plant, and the opportunities that we afford when you deal with us. You get full value for your money. There is nothing fanciful about our methods—we are just straight, clean business men.

WE SELL PRACTICALLY EVERYTHING

Our stock includes practically "everything under the sun". It's in truth, from a needle to a locomotive. No matter what your vocation, or what position in life you occupy, or what your business, or how great a merchant you are, you have use for us, and we have the goods that you can buy from us to a decided advantage. The quicker you learn to recognize this fact, the sooner you will be "putting money in your pocket".

Our stock includes Building Material, Lumber, Roofing, Sash, Doors, Millwork, Wire and Fencing, Hardware, Plumbing Material, Heating Apparatus and Supplies, Furniture, Household Goods, Rugs, Stoves and everything needed to furnish or equip your home, your club or hotel. It includes Groceries, Clothing, Dry Goods, Boots and Shoes, Furnishing Goods, and every single article to clothe a man, woman or child. It includes Sporting Goods, Fishing Tackle, Hunting Outfits, Tents, Guns, Harness and Vehicles, Jewelry, Sewing Machines, Clocks; also structural iron needed in the construction of buildings, bridges, etc. Machinery, gasoline, gas and electric power outfits. In fact you cannot think of a single manufactured article that we cannot supply you at a saving in price. Let us convince you—it means but little effort on your part to prove the truth of all we say. Write us to-day for our Catalogue and literature. Fill in the coupon shown below.

VOL. LVIII. NO. 7 DES MOINES, IOWA, FEB[illegible]13, 1913. WHOLE NO. 2888

The most interesting and instructive automobile books ever published—*Free*

HERE are the first *real* books ever published concerning the practical purchase and *proper* operation of an automobile. They were written by the best and biggest authority in the business—a man who understands and can make clear to you the very things you want to know most about. These books are so clever, clear and simple that your children can easily understand them. The publishing of these books cost us thousands of dollars. Both books are absolutely free.

HOW TO PURCHASE A CAR—Vol. I.

The first book tells you how to buy a car; how to weigh its quality; how to determine its real value; how to judge its construction.

You would not go into the grain, produce, hay, poultry, dairy or any other business without a good knowledge of that business. You would study existing prices, values and conditions. How, then, can you expect to make a practical automobile purchase without as much automobile intelligence as you can get? This book gives it all to you —*free.*

It clearly explains just which axle construction you should have in your car; it advises you on brakes; it judges a car's power; explains the modern gasoline motor; goes into spring suspension and all the other important points. In short, it simplifies; aids, bolsters and adds generally to your confidence when buying an automobile, because it thoroughly acquaints you with the subject.

HOW TO OPERATE A CAR—Vol. II.

Often a good car is put out of business simply because it was not properly operated or taken care of. Sometimes just one little false move, on the part of the driver, will put a car out of commission for life. We all live and learn.

So we got up an Overland book on the fundamentals of proper driving, operation and care. It will help every motorist in America. It tells you exactly how to run a car; when, where and how to lubricate it; how to make adjustments, etc., etc.

Here are some of the instructive chapters: "How to Start the Motor," "How to Start the Car," "The Best Way to Turn Corners," "Rules of the Road," "How to Find a Missing Cylinder," etc. Each point from starting to stopping is covered and covered thoroughly. It contains over 100 pages of clear information, all carefully illustrated with diagrams and drawings. Anywhere else this volume, with its profuse illustrations would cost several dollars. You can have it free.

Write for these two free books to-day.

We want you to read these books for a selfish purpose. We know this valuable information, clear explanation and practical advice, in addition to helping you purchase and operate your car, will only go further in proving to you our high standard and great efficiency.

For in the Overland you get more real car for less money than from any other manufacturer in the world.

DES MOINES, IOWA, THURSDAY FEBRUARY 13, 1913.

Improving Our Draft Horses By Means of Colt Shows

By W. A. Freehoff, Dane County, Wisconsin.

IN many communities of the middle West the raising of high-class draft horses is being encouraged by the holding of colt shows. G. W. Grigsby, president of the Iowa Draft Horse Breeders' Association, organized one of the first colt shows held in that state. He is the head of what is known as the Madrid Colt Show Association, the members of which annually exhibit a superior lot of foals of their own breeding. To provide a suitable premium fund, to suitably pay expert judges, and to meet other necessary expenses, all stallion owners are regularly charged a membership fee of ten dollars, while the merchants of Madrid have always responded liberally to encourage the production and presentation of high-class draft colts. The colts are classified as to breed, six classes provided in all and eight premiums to the class. This association holds its show in the month of September, or just before the colts are weaned.

Last spring a very successful colt show was held at Glenwood City, Wis. It was the first show of its kind ever held in that section, but in spite of the poor condition of the roads and the fact that the colts were not appearing at their best at that time of the year, a splendid showing was made. Three Percheron stallions are now owned in that Dunn county town; when they first arrived it was uphill work to get the settlers to patronize them, but now the grade sires are being discarded, the farmers in the vicinity choosing to use nothing but pure breds. Colt shows have proven to Dunn county farmers that the pure-bred stallion is the only one to use. The horsemen and farmers living in and near Glenwood City expect to hold two shows each year.

James G. Boyd, a prominent Milwaukee horse breeder, is of the opinion that a showing of draft foals might well be made a feature at many or all of our fairs. He believes that the fair association should offer greater inducements to the breeders to present their weanling and yearling colts at these agricultural expositions. He is sure that once the foals get the attention in this country they deserve that the breeders of the United States not only could, but would, raise as good horses as do the horsemen of France. James McLay, one of America's most noted Clydesdale men, believes that colt shows can be successfully held in communities in which a number of the farmers own good mares. A. R. Ives, of Walworth county, Wis., has found that colt shows held in connection with fairs have helped along the horse industry and believes separate colt shows would have much the same influence.

These instances of colt shows, and the opinions of experienced breeders, hint at the possibilities of the colt show. Many sections of the country are successfully working out the plan.

Through the efforts of Dr. A. S. Alexander county horse breeders' associations are being organized throughout Wisconsin. Previously each breeder has been acting for himself and taking comparatively little interest in the operations of his more successful neighbors. In this way individual breeders have succeeded in isolated instances, but state-wide horse breeding has made slow progress.

Each stallion in public service in Wisconsin is now correctly designated as "pure bred," "cross bred," "non-standard bred," "grade," or "scrub." Organization among breeders has made easier the enforcement of the stallion law, and in each county a better understanding of the correct principles of horse breeding has been noted where horse breeding clubs have been formed. Through these organizations it is also possible, in fact advisable, to hold colt shows once or twice a year, thus graphically demonstrating the differences between certain types of mares and stallions used. It is through such county organizations rather than through regular colt show associations, good though the latter may be, that the colt shows should be held. The colt shows are not necessarily the determining factor in horse improvement, they are simply an important and necessary factor in connection with other co-operative work. Each county horse breeders' association, where already organized, should at once take steps to hold a colt show. In those counties where the breeders are not already organized, organization will be found advantageous. The horsemen of any community should also insist that colts be well represented at the county, district, and state fairs.

But in order to have successful colt shows the colts must be raised and fitted in the correct manner. If the colt show does even that much its existence is justified.

There is a possibility of making the county breeders' associations societies for selling the colts. The same organization which shows the foals would list the colts in that county, with adequate detailed information of interest to a prospective buyer. Fees charged for this listing would defray the expenses of corresponding and advertising. By means of these colt lists a prospective buyer would know how many animals there are in a community and whether it would pay him to make a trip of inspection or not.

To raise a good foal, worthy of exhibition in a colt show, is a somewhat difficult proposition. The mare, according to recognized authority, should be

In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address all letters to

THE HOMESTEAD COMPANY,
Des Moines, Iowa.

A WORD OF THANKS.

The week which has elapsed since The Homestead building was partially destroyed by fire has been a strenuous one. There has been a multitude of details attendant upon bringing order out of the chaos wrought by the flames, effecting the beginning of a reorganization, and planning for a bigger and better Homestead building and equipment for the future. The week has been one of commingled setbacks, offset by the cheering and encouraging words of friends and patrons, and advances, made possible by the support given in such whole-souled and whole-hearted fashion by all those who have been called upon to lend a hand. At last, with the work of preparing another week's paper practically completed, I find time to write this message of thanks for the commending and consoling words from hundreds of friends and subscribers, whose cheery letters have made smooth many hard and difficult places. When the confusion and strenuous rush have long since disappeared, to be only dim and indistinct fragments of memory, I shall continue to treasure most vividly in mind the consolations of friendship and the inspiring words and letters of those whose good will, so heartily expressed, has minimized the difficulties and mitigated the worries attendant upon last week's catastrophe. To all who have written expressing their sorrow and sympathy I can only say, in all sincerity and humility, "I thank you, more than words can tell."

Some of the letters received during the past week are so inspiring, so full of the real, genuine spirit of friendship, that they deserve to be passed along for the appreciation of all. In the belief that such good things should be shared with my readers and friends I print herewith the letter of Mr. George A. Davies, a valued subscriber, Glenwood, Iowa. Mr. Davies writes:

> Glenwood, Iowa, Feb. 11:—I have just read of your great misfortune in the burning of The Homestead building. I want to say to you that I feel very sorry indeed for you and your family and all connected with The Homestead. Having once been completely burned out of my business building, implements, tools, material and all, a clean sweep, I know how to sympathize with you. I am glad to know that with your accustomed pluck and energy The Homestead will be rebuilt on a larger scale than ever. Don't have any fears; your subscribers will wait on you till the last day in the morning for The Homestead,—the best agricultural paper I ever saw.
>
> Very truly yours,
> George A. Davies.

Another letter which brought encouragement on a particularly trying day was the one written by the Grand Old Man of agriculture, Mr. F. D. Coburn, secretary of the Kansas State Board of Agriculture, a man whose friendship is sweet and precious beyond the power of wealth to compute or measure. Secretary Coburn writes:

> Capitol Building, Topeka, Kans., Feb. 10:—I am greatly distressed to just now read in The Homestead of the fire that destroyed your publishing plant. I know you will build on the ruins a much greater and better one, but in the loss and annoyances the calamity brings to you, you surely have my sincere sympathy; also my full confidence.
>
> Cordially,
> F. D. Coburn.

Of the many hundreds of letters received it is impossible to print even brief extracts from all, but I cannot refrain from giving the greater part of the one written by Col. George P. Bellows, the veteran auctioneer of Maryville, Mo., whose word is his bond and whose career is one of the prides of his state and the entire grain belt. Colonel Bellows writes:
